LA6565 — For CD and DVD players 5-channel Driver (BTL:4ch,H-bridge:1ch)

Overview

The LA6565 is a 4-channel BTL plus 1-channel H-bridge actuator driver developed for use in CD and DVD drives. The BTL driver channels 1 and 2 include built-in operational amplifiers allowing the LA6565 to support a wide range of applications.

Functions

- Five power amplifier channels on a single chip (Bridge connection (BTL): 4-channels, H-bridge: 1-channel)
- IO max: 1A
- Built-in level shifters (except for the H bridge channel)
- Muting circuits (output on/off, two systems)
 (The muting circuits operate for the BTL amplifiers. They do not apply to the H-bridge or regulator circuits.)
- Built-in regulator (Uses an external PNP-transistor and is set with an external resistor.)
- Output voltage setting function (loading driver)
- Built-in independent operational amplifiers
- Thermal shutdown circuit

Specifications

Maximum Ratings at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	V _{CC} max		14	V
Maximum output current	I _O max		1	Α
Maximum input voltage	V _{INB}		13	V
MUTE pin voltage	V _{MUTE}		13	V
Allowable power dissipation	Pd max	Independent IC	0.8	W
		Mounted on a specified board *	2	W
Operating temperature	Topr		-40 to +85	°C
Storage temperature	Tstg		-55 to +150	°C

^{*} Specified board: 114.3mm × 76.1mm × 1.6mm, glass epoxy board.

- Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment (home appliances, AV equipment, communication device, office equipment, industrial equipment etc.). The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for applications outside the standard applications of our customer who is considering such use and/or outside the scope of our intended standard applications, please consult with us prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.
- Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

Line regulation								

^{*1:} The total current dissipation for $V_{CC}P1$, $V_{CC}P2$, and $V_{CC}S$ with no load.

^{*2:} The input amplifier is a buffer amplifier.

^{*3:} The voltage difference between the two sides of the load (12 Ω).

^{*4:} When the MUTE pin is high, the output will be on, and when low, the output will be off (high-impedance state).

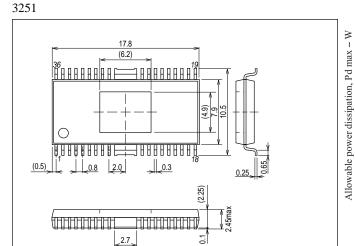

^{*5:} The input operational amplifier source is constant current. Since the $11k\Omega$ resistor between this and the next stage functions as the load, the input operational amplifier gain must be set carefully.

^{*6:} The braking operation is a short (to ground) braking operation. The sink side output is on at this time.

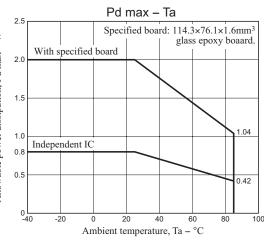

^{*7:} Design guarantee.

Input operational amplifier output. 24 V _O _OP Operational amplifier output. 25 V _{IN} OP Operational amplifier - input 26 V _{IN} +OP Operational amplifier + input 27 REG_IN Regulator error amplifier output. Connect this pin to the base of the external PNP-transistor. 28 REG_OUT Regulator error amplifier input (+). 29 VREF_OUT VREF amplifier (voltage follower) output. 30 VREF_IN VREF input. Apply the external reference voltage to this pin. 31 V _{IN} 4 Channel 4 input. Input operational amplifier - input. 32 V _{IN} 4- Channel 4 input. Input operational amplifier - input. 33 MUTE234 Controls the on/off state of channels 2, 3, and 4. 34 MUTE1 Channel 1 output on/off control 35 VCONT Loading block output high-level voltage setting.	17	V _{IN} 1-	Channel 1 input. Input operational amplifier – input.		
20 VIN2 ⁻ Channel 2 input. Input operational amplifier – input. 21 VIN2 Channel 2 input. Input operational amplifier output. 22 VIN3 ⁻ Channel 3 input. Input operational amplifier – input. 23 VIN3 Channel 3 input. Input operational amplifier output. 24 VO_OP Operational amplifier output. 25 VIN^OP Operational amplifier – input 26 VIN+OP Operational amplifier + input 27 REG_IN Regulator error amplifier output. Connect this pin to the base of the external PNP-transistor. 28 REG_OUT Regulator error amplifier input (+). 29 VREF_OUT VREF amplifier (voltage follower) output. 30 VREF_IN VREF input. Apply the external reference voltage to this pin. 31 VIN4 Channel 4 input. Input operational amplifier output. 32 VIN4 ⁻ Channel 4 input. Input operational amplifier – input. 33 MUTE234 Controls the on/off state of channels 2, 3, and 4. 34 MUTE1 Channel 1 output on/off control 35 VCONT Loading block output high-level voltage setting.	18	V _{IN} 1	Channel 1 input. Input operational amplifier output.		
21 V _{IN} 2 Channel 2 input. Input operational amplifier output. 22 V _{IN} 3 ⁻ Channel 3 input. Input operational amplifier – input. 23 V _{IN} 3 Channel 3 input. Input operational amplifier output. 24 V _O _OP Operational amplifier output. 25 V _{IN} OP Operational amplifier – input 26 V _{IN} +OP Operational amplifier + input 27 REG_IN Regulator error amplifier output. Connect this pin to the base of the external PNP-transistor. 28 REG_OUT Regulator error amplifier input (+). 29 VREF_OUT VREF amplifier (voltage follower) output. 30 VREF_IN VREF input. Apply the external reference voltage to this pin. 31 V _{IN} 4 Channel 4 input. Input operational amplifier output. 32 V _{IN} 4 ⁻ Channel 4 input. Input operational amplifier – input. 33 MUTE234 Controls the on/off state of channels 2, 3, and 4. 34 MUTE1 Channel 1 output on/off control 35 VCONT Loading block output high-level voltage setting.	19	V _{IN} 2+	Channel 2 input. Input operational amplifier + input.		
22 V _{IN} 3 Channel 3 input. Input operational amplifier – input. 23 V _{IN} 3 Channel 3 input. Input operational amplifier output. 24 V _O _OP Operational amplifier output. 25 V _{IN} ^OP Operational amplifier – input 26 V _{IN} [†] OP Operational amplifier + input 27 REG_IN Regulator error amplifier output. Connect this pin to the base of the external PNP-transistor. 28 REG_OUT Regulator error amplifier input (+). 29 VREF_OUT VREF amplifier (voltage follower) output. 30 VREF_IN VREF input. Apply the external reference voltage to this pin. 31 V _{IN} 4 Channel 4 input. Input operational amplifier – input. 32 V _{IN} 4 Channel 4 input. Input operational amplifier – input. 33 MUTE234 Controls the on/off state of channels 2, 3, and 4. 34 MUTE1 Channel 1 output on/off control 35 VCONT Loading block output high-level voltage setting.	20	V _{IN} 2-	Channel 2 input. Input operational amplifier – input.		
V _{IN} 3 Channel 3 input. Input operational amplifier output. V _O _OP Operational amplifier output. V _{IN} OP Operational amplifier input V _{IN} OP Operational amplifier input Regulator error amplifier output. Connect this pin to the base of the external PNP-transistor. REG_IN Regulator error amplifier input (+). REG_OUT Regulator error amplifier input (+). VREF_OUT VREF amplifier (voltage follower) output. VREF_IN VREF input. Apply the external reference voltage to this pin. VIN4 Channel 4 input. Input operational amplifier - input. VIN4 Channel 4 input. Input operational amplifier - input. MUTE234 Controls the on/off state of channels 2, 3, and 4. MUTE1 Channel 1 output on/off control VCONT Loading block output high-level voltage setting.	21	V _{IN} 2	Channel 2 input. Input operational amplifier output.		
V _{O_} OP Operational amplifier output. V _{IN} OP Operational amplifier – input V _{IN} OP Operational amplifier – input REG_IN Regulator error amplifier output. Connect this pin to the base of the external PNP-transistor. REG_OUT Regulator error amplifier input (+). VREF_OUT VREF amplifier (voltage follower) output. VREF_IN VREF input. Apply the external reference voltage to this pin. V _{IN} 4 Channel 4 input. Input operational amplifier – input. V _{IN} 4 Channel 4 input. Input operational amplifier – input. MUTE234 Controls the on/off state of channels 2, 3, and 4. MUTE1 Channel 1 output on/off control VCONT Loading block output high-level voltage setting.	22	V _{IN} 3-	Channel 3 input. Input operational amplifier – input.		
25 V _{IN} -OP Operational amplifier – input 26 V _{IN} +OP Operational amplifier + input 27 REG_IN Regulator error amplifier output. Connect this pin to the base of the external PNP-transistor. 28 REG_OUT Regulator error amplifier input (+). 29 VREF_OUT VREF amplifier (voltage follower) output. 30 VREF_IN VREF input. Apply the external reference voltage to this pin. 31 V _{IN} 4 Channel 4 input. Input operational amplifier output. 32 V _{IN} 4 Channel 4 input. Input operational amplifier – input. 33 MUTE234 Controls the on/off state of channels 2, 3, and 4. 34 MUTE1 Channel 1 output on/off control 35 VCONT Loading block output high-level voltage setting.	23	V _{IN} 3	Channel 3 input. Input operational amplifier output.		
26 V _{IN} +OP Operational amplifier + input 27 REG_IN Regulator error amplifier output. Connect this pin to the base of the external PNP-transistor. 28 REG_OUT Regulator error amplifier input (+). 29 VREF_OUT VREF amplifier (voltage follower) output. 30 VREF_IN VREF input. Apply the external reference voltage to this pin. 31 V _{IN} 4 Channel 4 input. Input operational amplifier output. 32 V _{IN} 4 Channel 4 input. Input operational amplifier – input. 33 MUTE234 Controls the on/off state of channels 2, 3, and 4. 34 MUTE1 Channel 1 output on/off control 35 VCONT Loading block output high-level voltage setting.	24	V _O _OP	Operational amplifier output.		
REG_IN Regulator error amplifier output. Connect this pin to the base of the external PNP-transistor. REG_OUT Regulator error amplifier input (+). VREF_OUT VREF amplifier (voltage follower) output. VREF_IN VREF input. Apply the external reference voltage to this pin. VIN4 Channel 4 input. Input operational amplifier output. VIN4 Channel 4 input. Input operational amplifier – input. MUTE234 Controls the on/off state of channels 2, 3, and 4. MUTE1 Channel 1 output on/off control VCONT Loading block output high-level voltage setting.	25	V _{IN} -OP	Operational amplifier – input		
REG_OUT Regulator error amplifier input (+). VREF_OUT VREF amplifier (voltage follower) output. VREF_IN VREF input. Apply the external reference voltage to this pin. VIN4 Channel 4 input. Input operational amplifier output. VIN4 Channel 4 input. Input operational amplifier – input. MUTE234 Controls the on/off state of channels 2, 3, and 4. MUTE1 Channel 1 output on/off control VCONT Loading block output high-level voltage setting.	26	V _{IN} +OP	Operational amplifier + input		
VREF_OUT VREF amplifier (voltage follower) output. VREF_IN VREF input. Apply the external reference voltage to this pin. VIN4 Channel 4 input. Input operational amplifier output. VIN4 Channel 4 input. Input operational amplifier – input. VIN4 Channel 4 input. Input operational amplifier – input. MUTE234 Controls the on/off state of channels 2, 3, and 4. MUTE1 Channel 1 output on/off control VCONT Loading block output high-level voltage setting.	27	REG_IN	Regulator error amplifier output. Connect this pin to the base of the external PNP-transistor.		
30 VREF_IN VREF input. Apply the external reference voltage to this pin. 31 V _{IN} 4 Channel 4 input. Input operational amplifier output. 32 V _{IN} 4 Channel 4 input. Input operational amplifier – input. 33 MUTE234 Controls the on/off state of channels 2, 3, and 4. 34 MUTE1 Channel 1 output on/off control 35 VCONT Loading block output high-level voltage setting.	28	REG_OUT	Regulator error amplifier input (+).		
31 V _{IN} 4 Channel 4 input. Input operational amplifier output. 32 V _{IN} 4 Channel 4 input. Input operational amplifier – input. 33 MUTE234 Controls the on/off state of channels 2, 3, and 4. 34 MUTE1 Channel 1 output on/off control 35 VCONT Loading block output high-level voltage setting.	29	VREF_OUT	VREF amplifier (voltage follower) output.		
32 V _{IN} 4 ⁻ Channel 4 input. Input operational amplifier – input. 33 MUTE234 Controls the on/off state of channels 2, 3, and 4. 34 MUTE1 Channel 1 output on/off control 35 VCONT Loading block output high-level voltage setting.	30	VREF_IN	VREF input. Apply the external reference voltage to this pin.		
33 MUTE234 Controls the on/off state of channels 2, 3, and 4. 34 MUTE1 Channel 1 output on/off control 35 VCONT Loading block output high-level voltage setting.	31	V _{IN} 4	Channel 4 input. Input operational amplifier output.		
34 MUTE1 Channel 1 output on/off control 35 VCONT Loading block output high-level voltage setting.	32	V _{IN} 4 ⁻	Channel 4 input. Input operational amplifier – input.		
35 VCONT Loading block output high-level voltage setting.	33	MUTE234	Controls the on/off state of channels 2, 3, and 4.		
	34	MUTE1	Channel 1 output on/off control		
36 S_GND Signal system ground.	35	VCONT	Loading block output high-level voltage setting.		
	36	S_GND	Signal system ground.		

^{*} center frame (FR) becomes GND for the power system, Set this to the minimum potential together with S_GND (signal system ground).

Pin Description

	Pin Description						
Pin No.	Pin name	Function	Description	Equivalent circuit			
16 17	V _{IN} 1+ V _{IN} 1-	Input (CH1 to 4)	Inputs (channels 1 to 4 and the independent operational	V _{IN*} \bigcirc			
18 19 20 21 22 23 32 31 26 25 24	VIN1 VIN2+ VIN2- VIN2 VIN3- VIN3 VIN4- VIN4 VIN+OP VIN-OP VO_OP		amplifier)	V _{CC} S			
1 2	FWD REV	Input (H-bridge)	Logic inputs. The IC is set to one of four modes, forward, reverse, brake, and free running by the combination of high and low values applied to these pins.	FWD REV REV S-GND			
12 13 10 11 8 9 6 7	Vo1+ Vo1- Vo2+ Vo2- Vo3+ Vo3- Vo4+ Vo4-	Output (BTL-AMP)	Channel 1 to 4 outputs.	VccP SH FR			
4 5	V _{LO} +	Output (H-bridge)	H-bridge (loading) output.	VCCP2 VLO+ VLO- NCCP2 VLO- NCCP			
35	VCONT	Input	Loading output setting.	20kΩ 20kΩ			
33 34	MUTE234 MUTE1	MUTE	BTL amplifier output ON/OFF state setting. High: output ON Low: output OFF	VCCS MUTE* S-GND S-GND			

Truth Table (Loading (H bridge) block)

		<u> </u>	<u> </u>	
FWD	REV	V _{LO} +	V_{LO}^-	Loading output
	L	OFF	OFF	OFF *1
_	Н	Н	L	Forward
	L	L	Н	Reverse
Н	Н	L	L	Short-circuit braking *2

^{*1.} The output goes to the high-impedance state.

Relationship between the MUTE pins and the power supply systems (V_{CC}P*)

Application Circuit Example

^{*2.} In braking mode, the sink side transistor is turned on (for short-circuit braking). The VLO⁺ and VLO⁻ pins go to a level that is essentially the ground level.

- SANYO Semiconductor Co.,Ltd. assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein.
- SANYO Semiconductor Co.,Ltd. strives to supply high-quality high-reliability products, however, any and all semiconductor products fail or malfunction with some probability. It is possible that these probabilistic failures or malfunction could give rise to accidents or events that could endanger human lives, trouble that could give rise to smoke or fire, or accidents that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO Semiconductor Co.,Ltd. products described or contained herein are controlled under any of applicable local export control laws and regulations, such products may require the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written consent of SANYO Semiconductor Co.,Ltd.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO Semiconductor Co.,Ltd. product that you intend to use.
- Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production.
- Upon using the technical information or products described herein, neither warranty nor license shall be granted with regard to intellectual property rights or any other rights of SANYO Semiconductor Co.,Ltd. or any third party. SANYO Semiconductor Co.,Ltd. shall not be liable for any claim or suits with regard to a third party's intellectual property rights which has resulted from the use of the technical information and products mentioned above.
