Description

M/A-COM's DS55-0004 is an IC-based monolithic power divider using M/A-COM's GMIC technology in a low cost SOIC-16 plastic package. This 5-way power divider is ideally suited for applications where PCB real estate is at a premium and part count reduction and cost are critical. Typical applications include base station switching networks and other cellular equipment, including subscriber units. Available in tape and reel.

The DS55-0004 is fabricated using a passive-integrated circuit process. The process features full-chip passivation for increased performance and reliability.

Handling Procedures

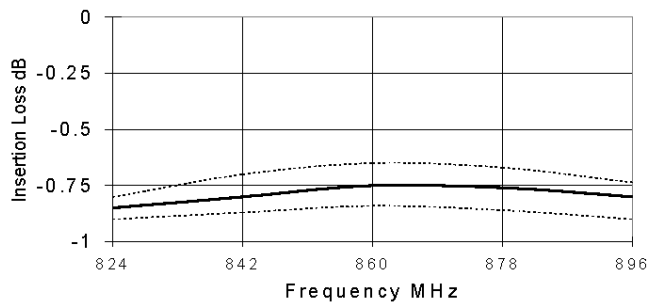

Please observe the following precautions to avoid damage:

Static Sensitivity

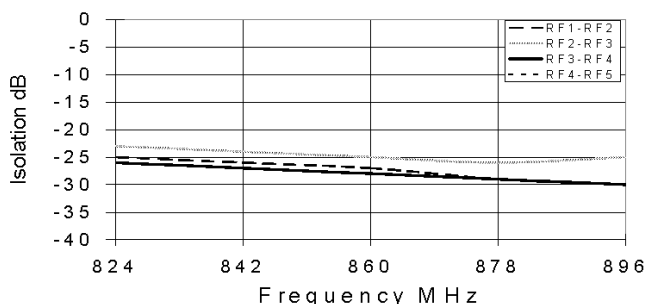

GMIC Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

Isolation vs. Frequency

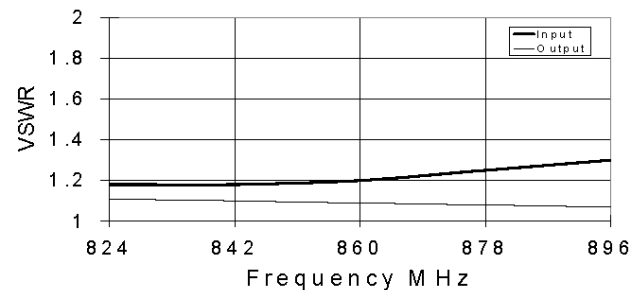

Absolute Maximum Ratings ^{1,2}

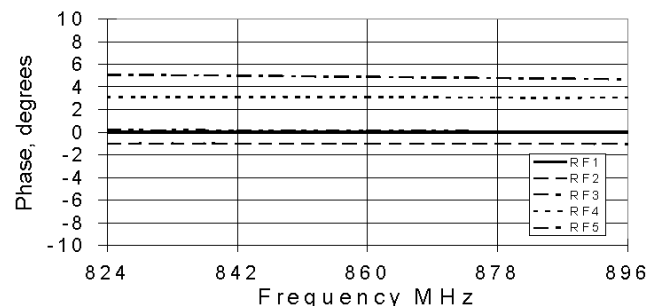

Parameter	Absolute Maximum
Input Power ³	1 W CW
Operating Temperature	-40°C to +85°C
Storage Temperature	-65°C to +150°C

- Exceeding any one or combination of these limits may cause permanent damage to this device.
- M/A-COM does not recommend sustained operation near these survivability limits.
- With Internal load dissipation of 0.125 W maximum.
