CMOS LSI

LC75106V — Digital Echo LSI with Built-in Mic Amplifier

Overview

The LC75106V is a digital echo LSI for karaoke. It has the microcomputer control mode (I²C BUS control) and non-control mode. Therefore, various karaoke systems can be made.

This LSI has 2ch mic amplifier (with ALC), volume of 2ch mic, echo feed back volume and echo volume.

In addition, when the stereo signal internal connected mode has the function of the vocal cancellation etc.

The karaoke system can be constructed with this LSI.

Functions

- 2ch mic amplifier (with built-in Auto Level Control)
- Volume of 2ch mic
- With built-in for digital echo memory 32kbit
- Feedback volume for digital echo
- Digital echo volume
- Mic mixing function
- Vocal cancellation
- With built-in oscillation circuit
- I²C bus control

Application

- Mini component audio and other

* I²C Bus is a trademark of Philips Corporation.

■ Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment. The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for new introduction or other application different from current conditions on the usage of automotive device, communication device, office equipment, industrial equipment etc. , please consult with us about usage condition (temperature, operation time etc.) prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.

■ Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

Sample Application Circuit (Mic-Gain = +38dB)

Stereo signal internal connection modes

Stereo signal outside connection modes

Control Data Structure (Serial Data Input)

The setting of LC75106 can be controlled with I²C Bus.

All the settings can be controlled by I²C Bus at the stereo signal internal connection modes (CS terminal = "H"), and all the volumes except the stereo source control can be set at the stereo signal outside connection modes (CS terminal = "L").

The karaoke system can be made from external resistance by doing I²C Bus Line in Pull Up at the stereo signal outside connection modes.

1) The explanation of I²C Bus

I²C Bus (Inter IC Bus) is the bus system which the PHILIPS company developed.

It does controls such as the start, the stop by two control signals of SDA (Serial Data) and SCL (Serial Clock).

The output of each signal is open drain and forms out of wired OR.

S; Start condition/P; Stop condition/ACK; Acknowledge

Data is transmitted in the MSB first.

1 unit is composed of 8 bits and ACK is put back from the slave to confirm.

Slave IC reads data with rising edge of SCL.

Master IC changes data by falling edge in SCL.

2) The control register

Table1 Slave Address

MSB	0	0	1	1	1	0	0	0	LSB
-----	---	---	---	---	---	---	---	---	-----

Note; LC75106 is reception exclusive use. It depends and it uses LSB by the "0" fixation.

• I²C data

Control with external parts

LC75106 can adjust the setting with external parts at the stereo signal outside connection modes.

(1) Delay time setting

The Delay time changes if the CR oscillation frequency with built-in LC75106 is adjusted.

Delay time	external Resistance	OSC Freq	Note
75ms	30kΩ	2.458MHz	
100ms	47kΩ	1.843MHz	
120ms	56kΩ	1.536MHz	
150ms	75kΩ	1.228MHz	
190ms	187kΩ	0.970MHz	

(2) Mic-Volume/ECHO Volume setting

When Mic Volume and ECHO Volume are set with external parts, it is possible to set it in the ratio of R1 and R2 as shown in the figure below.

Gain	R1	R2	Note
-2dB	10.284kΩ	39.716kΩ	
-4dB	18.452kΩ	31.548kΩ	
-6dB	24.941kΩ	25.059kΩ	
-8dB	30.095kΩ	19.905kΩ	
-9dB	32.259kΩ	17.741kΩ	
-10dB	34.189kΩ	15.811kΩ	
-12dB	37.441kΩ	12.559kΩ	
-14dB	40.024kΩ	9.976kΩ	
-15dB	41.109kΩ	8.891kΩ	
-16dB	42.076kΩ	7.924kΩ	
-18dB	43.705kΩ	6.295kΩ	
-20dB	45.000kΩ	5.000kΩ	
-23dB	46.460kΩ	3.540kΩ	
-26dB	47.494kΩ	2.506kΩ	
-29dB	48.226kΩ	1.774kΩ	
-32dB	48.744kΩ	1.256kΩ	
-∞dB	50.000kΩ	0	

(3) Feed Back Volume setting

To prevent the oscillation, the Echo Feed Back signal input terminal has Gain of -4dB.

Therefore, please calculate in consideration of the attenuation of -4dB when you set Volume.

Gain	R1	R2	Note
-4dB	0	50.000kΩ	
-6dB	10.284kΩ	39.716kΩ	
-9dB	18.452kΩ	31.548kΩ	
-12dB	24.941kΩ	25.059kΩ	
-∞dB	50.000kΩ	0	

(4) Mic AMP Gain setting

Mic Amplifier Gain is adjusted according to the resistance value applied to 3pin and 34pin. And low frequency is cut off by connecting condenser.

Mic Amplifier has built-in ALC (Auto Level Control). Output level can be controlled by inputting the standard voltage to 31pin.

1) Mic AMP Gain setting

- R1 = 56.2kΩ
[Mic Gain = 38dB]
R2 = R1/Mic Gain
= 56.2k/79.4
≈ 680

2) fc setting

$$f_c = \frac{1}{2\pi R1 C1}$$

(5) ALC control voltage setting

1) ALC control voltage setting

When the ALC detecting voltage is input to 31pin, the ALC operation level can be set. The setting method becomes as follows.

[VDD = 9.0V/1Vrms setting]

$$V_{DD}/2 = 9.0/2 = 4.5$$

$$1V_{rms}/2 = \sqrt{2} * 1 = 1.414V$$

$$VALC \text{ setting voltage} = 4.5 - 1.414 = 3.086V \text{ (DC)}$$

ALC setting voltage can be set to put resistance between the terminal VREF and the terminal GND.

* The voltage of the terminal VREF depends on the power-supply voltage and changes.

2) ALC attack time/release time setting

The attack time and the release time of ALC can be set with the capacitor between 2pin - VDD and 35pin - VDD.

capacitor	Attack time	Release time	Note
2.2μF	About 60ms	About 6.0s	
1.0μF	About 35ms	About 2.5s	
0.1μF	About 16ms	About 0.25s	

- SANYO Semiconductor Co.,Ltd. assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein.
- Regarding monolithic semiconductors, if you should intend to use this IC continuously under high temperature, high current, high voltage, or drastic temperature change, even if it is used within the range of absolute maximum ratings or operating conditions, there is a possibility of decrease reliability. Please contact us for a confirmation.
- SANYO Semiconductor Co.,Ltd. strives to supply high-quality high-reliability products, however, any and all semiconductor products fail or malfunction with some probability. It is possible that these probabilistic failures or malfunction could give rise to accidents or events that could endanger human lives, trouble that could give rise to smoke or fire, or accidents that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO Semiconductor Co.,Ltd. products described or contained herein are controlled under any of applicable local export control laws and regulations, such products may require the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written consent of SANYO Semiconductor Co.,Ltd.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO Semiconductor Co.,Ltd. product that you intend to use.
- Upon using the technical information or products described herein, neither warranty nor license shall be granted with regard to intellectual property rights or any other rights of SANYO Semiconductor Co.,Ltd. or any third party. SANYO Semiconductor Co.,Ltd. shall not be liable for any claim or suits with regard to a third party's intellectual property rights which has resulted from the use of the technical information and products mentioned above.
