GaAs DPDT Diversity Switch 4.5 - 6.0 GHz

Ideal for WLAN IEEE 802.11a 0.5 micron GaAs PHEMT Process Integrated DC Blocking Capacitors

Low Insertion Loss: 0.8 dB at 5.2 GHz

Low Cost 3 mm 12-Lead PQFN Package

M/A-COM's MASWSS0039 is a GaAs PHEMT MMIC DPDT diversity switch in a low cost 3 mm 12-

lead PQFN package. It is designed for low insertion loss and allows for independent control and selection of each switch path. It integrates blocking

capacitors on all RF ports and thus eliminates the

The MASWSS0039 is ideally suited for applications

where very small size and low cost are required.

Typical applications are for WLAN IEEE 802.11a systems that employ two antennas for transmit and

systems operating between 4.5 GHz and 6.0 GHz requiring moderate power and diversity switching.

The MASWSS0039 is fabricated using a 0.5 micron gate length GaAs PHEMT process. The process features full passivation for performance and

This part can be used in all

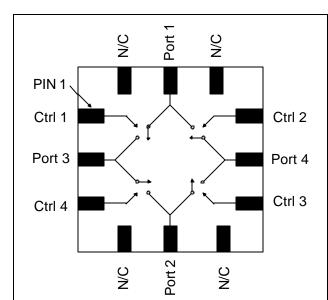

Package

need for additional off-chip DC blocking capacitors.

Storage Temperature	-65°C to +150°C		

2. Exceeding any one or combination of these limits may cause permanent damage to this device.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.
