

300mA Low Dropout Positive Voltage Regulator

General Description

The RT9162 is a positive low dropout regulator designed for applications requiring low dropout performance at full rated current. The device is available in fixed output voltages of 3.3V and 3.5V. The RT9162 provides excellent regulation over line, load, and temperature variations.

The other features include low dropout performance at a maximum of 1.3V at 300mA, fast transient response, internal current limiting, and thermal shutdown protection of the output devices. The RT9162 is a three-terminal regulators compatible with industrial 78XX series and available in surface mount SOT-89 packages.

Notes:

- (1) Low duty cycle pulse testing with Kelvin connections required.
- (2) Dropout voltage is defined as the input to output differential at which the output voltage drops 1% below the value measured with a 2V differential.
- (3) Bandwidth of 10 Hz to 10 kHz.
