

## 2 Amp DDR Bus Termination Regulator

### FEATURES

- Capable of sourcing and sinking 2A Continuous current
- Supports both DDR1 ( $1.25V_{TT}$ ) and DDR2 ( $0.9V_{TT}$ ) requirements
- Low Output Voltage Offset,  $\pm 20mV$
- Thermal and Current Limit Protection
- Integrated Power MOSFETs
- Generates Termination for SSTL-2
- High Accuracy Output at Full Load
- Adjustable  $V_{OUT}$  by External Resistors
- Minimal External Components
- Available in 8 pin NSOIC package

*Now Available in Lead Free Packaging*

### APPLICATIONS

- DDR Memory Termination
- Active Bus Termination
- Supply Splitter

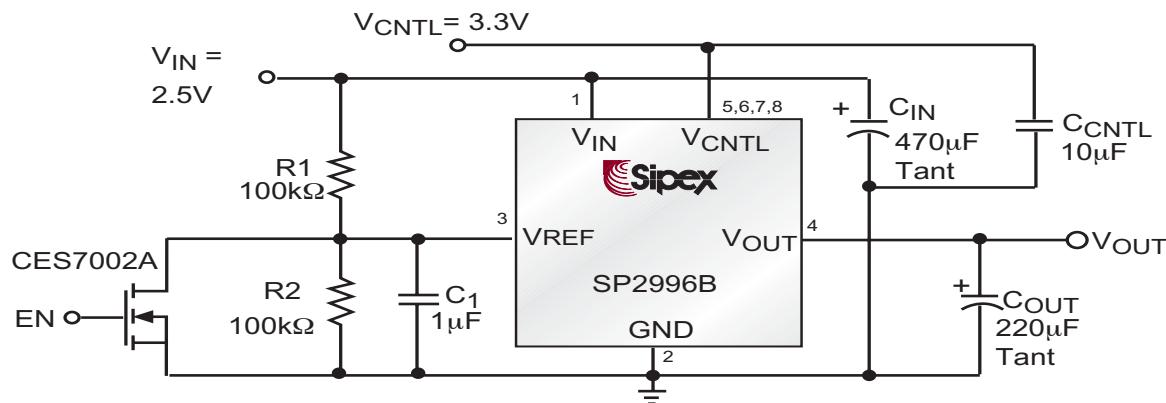

---

### DESCRIPTION

The SP2996B voltage regulator is designed to convert voltage supplies ranging from 1.6V to 6V into a desired output voltage which is adjusted by an external resistor divider. The regulator is capable of sourcing or sinking up to 2A of Continuous current while regulating an output voltage to within 20mV. The SP2996B provides an excellent voltage source for active termination schemes of high speed transmission lines such as those seen in high speed memory buses and distributed backplane designs when used in conjunction with series termination resistors. The voltage output of the regulator can be used as a termination voltage for DDR SDRAM, and it meets the JEDEC SSTL-2 and SSTL-3 specifications. Current limits in both sourcing and sinking mode, plus on-chip thermal shutdown make the circuit tolerant of output fault conditions.

---

### TYPICAL APPLICATIONS CIRCUIT

## ABSOLUTE MAXIMUM RATINGS

Supply Voltage ..... -0.4V to 7V  
 Operating Temperature Range.....-40°C to +85°C  
 Junction Temperature ..... 125°C  
 Storage Temperature Range.....-65°C to +150°C

## ELECTRICAL CHARACTERISTICS

$V_{IN} = 2.5V$ ,  $V_{CTRL} = 3.3V$ ,  $V_{REF} = 0.5V_{IN}$ ,  $C_{OUT} = 10\mu F$  (Ceramic),  $T_A = 25^\circ C$ , unless otherwise specified. (Note 1)

| Parameter                              | Symbol        | Test Conditions  | Min       | Typ     | Max | Units   |

| Thermal Shutdown Hysteresis            |               | Guaranteed by design   | -         | 30      | -   | °C      |
| <b>Shutdown Specifications</b>         |               |  |           |         |     |         |
| Shutdown Threshold                     | $V_{TRIGGER}$ | Output ON<br>( $V_{REF} = ZeroV \rightarrow 0.25V$ )                   | 0.8       | -       | -   | V       |
| Shutdown Threshold                     | $V_{TRIGGER}$ | Output OFF<br>( $V_{REF} = 1.25V \rightarrow ZeroV$ )                  | -         | -       | 0.2 |         |
| Thermal Resistance                     | $\theta_{JA}$ |  |           | 160     |     | °C/W    |
|  | $\theta_{JC}$ |  |           | 40      |     |         |

Note 1 . Specifications are tested for production at  $T_A = 25^\circ C$  . Specifications over the -40°C to 85°C operating temperature range are assured by design, characterization and correlation with Statistical Quality Controls (SQC).

Note 2.  $V_{OS}$  offset is the voltage measurement defined as  $V_{OUT}$  subtracted from  $V_{REF}$ .

Note 3. Load regulation is measured at constant junction temperature, using pulse testing with a low ON time.

Note 4. Current limit is measured by pulsing a short time.

Note 5. In order to safely operate your system,  $V_{CTRL}$  must be  $> V_{IN}$ .

## TYPICAL PERFORMANCE CHARACTERISTICS

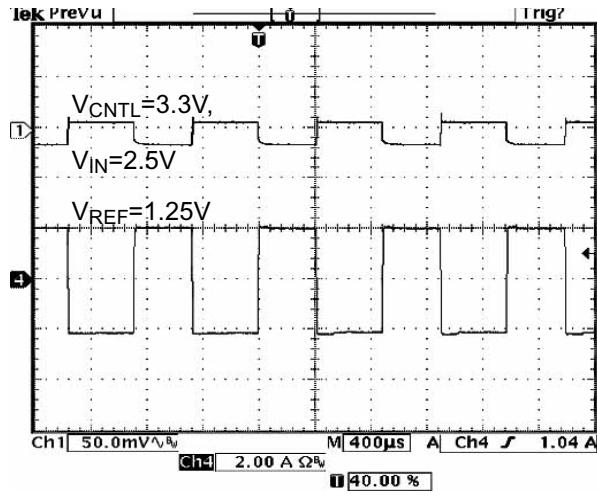

## TYPICAL PERFORMANCE CHARACTERISTICS

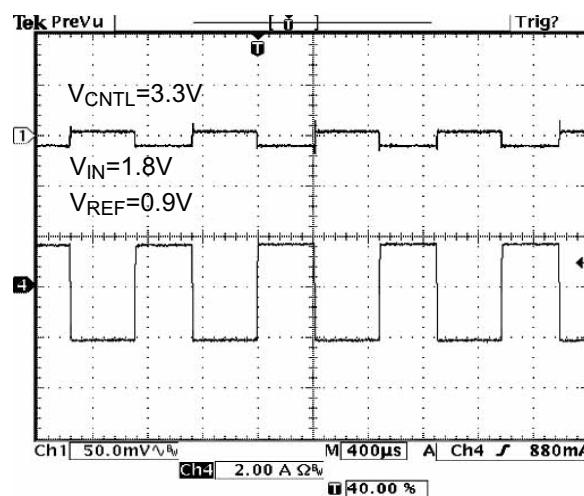

Output Short-Circuit (Sinking)

Output Short-Circuit (Sourcing)

Transient Response at  $1.25V_{TT}/2A$

Transient Response at  $0.9V_{TT}/2A$

### Internal parasitic diode

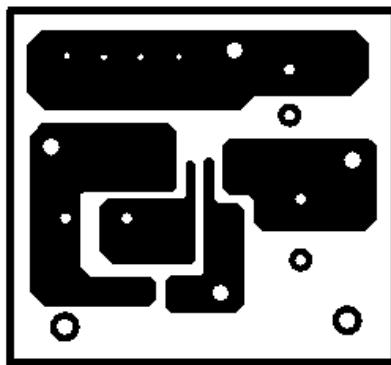

Avoid forward-biasing the internal parasitic diode,  $V_{OUT}$  to  $V_{CNTL}$ , and  $V_{OUT}$  to  $V_{IN}$ . Positive voltage should not be applied to the output if  $V_{IN}$  and  $V_{CNTL}$  are not present.

### Considerations for designing, resistance of voltage divider

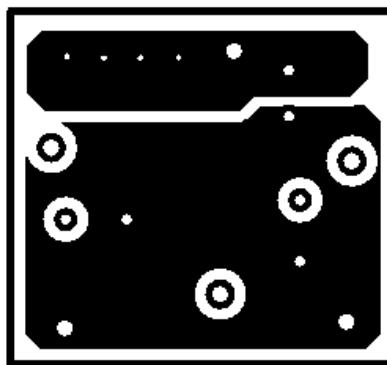

When the reference voltage is programmed below 0.2V the pulldown capability of the internal NMOS transistor is limited. It is recommended to place a filter capacitor from  $V_{RE}$  to ground in order to reduce sensitivity to noise and improve power up characteristics (soft start).

### Layout Considerations

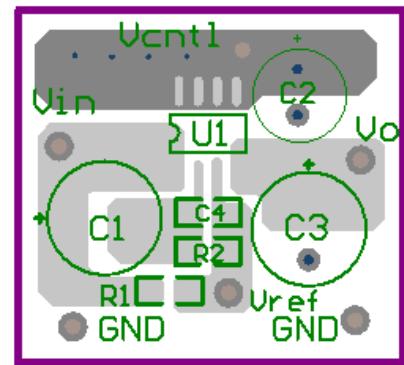

The SP2996B is offered in the NSOIC-8 package, resulting in attention needing to be paid to dissipating heat effectively when it operates in high current. In order to prevent maximum junction temperature from being exceeded, suitable copper area is necessary. The large copper area at  $V_{CNTL}$  pins is available, and by taking advantage of this, much heat dissipation is attained. Use vias to direct heat into the bottom layer as the layout examples show below. All capacitors should be placed as close as possible to relative pins.

## ORDERING INFORMATION

| PART NUMBER        | TEMPERATURE RANGE  | PACKAGE      |
|--------------------|--------------------|--------------|
| SP2996BEN .....    | -40°C to 85°C..... | 8 Lead NSOIC |
| SP2996BEN/TR ..... | -40°C to 85°C..... | 8 Lead NSOIC |

Available in lead free packaging. To order add "-L" suffix to part number.

Example: SP2996BEN/TR = standard; SP2996BEN-L/TR = lead free.

/TR = Tape and Reel

Pack quantity is 2,500 for NSOIC.
