

Product Description

Stanford Microdevices' SNA-576 is a GaAs monolithic broadband amplifier housed in a low-cost stripline ceramic package. This amplifier provides 19dB of gain when biased at 70mA and 5.0V.

External DC decoupling capacitors determine low frequency response. The use of an external resistor allows for bias flexibility and stability.

These unconditionally stable amplifiers are designed for use as general purpose 50 ohm gain blocks. Also available in chip form (SNA-500), its small size (0.4mm x 0.4mm) and gold metallization make it an ideal choice for use in hybrid circuits.

The SNA-576 is available in tape and reel at 1000, 3000 and 5000 devices per reel.

SNA-576

DC-3 GHz, Cascadable GaAs MMIC Amplifier

Product Features

- Cascadable 50 Ohm Gain Block
- 19dB Gain, +18dBm P1dB
- 1.5:1 Input and Output VSWR
- Operates From Single Supply
- Low Cost Stripline Mount Ceramic Package
- Hermetically Sealed

Applications

- Narrow and Broadband Linear Amplifiers
- Commercial and Industrial Applications
