

Description

All 19" cassette type converters are equipped with either H11-, H15-, H15S2 or H15S4 male connectors. Mating female connectors are available as accessories according to the following tables. The four H-type connector versions are specially designed for power supply applications, capable of handling high operating currents. The connectors have an integrated code key system allowing many coding possibilities. Converters with high output current normally use two contacts in parallel to keep the voltage drop across the connector as low as possible. In case of very high currents, the connectors are fitted with round high current contacts.

H11 Connectors

This connector has eleven contacts in one vertical column marked 2 to 32. Mating and mounting conditions are according to DIN 41612. The connector contacts are hard-silver-plated and correspond to quality class 1, with respect to electrical and mechanical life time.

Table 1: H11 Connector Survey

| Female connector type | Reference | Description of terminals | Fig. | Integrated coding |
|------------------------------|-----------|---|------|-------------------|
| STV-H11-F/CO | HZZ00101 | Faston terminals 6.3 × 0.8 mm | 2 | yes |
| STV-H11-FS/CO ² | HZZ00104 | Faston terminals 6.3 × 0.8 mm, solderable (short moulding) | 3 | yes |
| STV-H11-FSR/CO | HZZ00102 | Screw terminals, 90°, 2.5 mm ² (AWG 13), torque ≤ 26.6 Ncm | 4 | yes |
| STV-H11-FB/CO ¹ | HZZ00103 | Solder pin 5.2 mm, Ø 1.6 mm | 5 | yes |
| STV-H11-FBER/CO ² | HZZ00113 | Solder pin 4.3 mm, Ø 1.0 mm | 5 | yes |
| STV-H11-FP/CO ² | HZZ00111 | Press fit 6.5 mm, Ø 1.0 mm | 5 | yes |
| STV-H11-FBG/CO ² | HZZ00199 | Solder pin 5.2 mm, Ø 1.6 mm, gold-plated contacts | 5 | yes |

H15 Connectors

This connector has 15 contacts in two vertical columns, marked 4 to 32 and is designed to meet DIN 41612. The connector contacts are hardsilver-plated and correspond to quality class 1, with respect to electrical and mechanical life time.

This connector type (male version) is used in the following converter series (case size):

PSS (S01), S (S02), Q (Q01), LPC (Q03), P (Q04), PSK (K01), K (K02), S (S02), T (T01), for output currents ≤ 18 A.

H15S2, H15S4 Connectors

This special connectors derive from the H15 connectors having 7 standard contacts as above, combined with 2 (H15S2) or 4 (H15S4) high current contacts (jacks) according to DIN 41626. These jacks are specially designed to handle currents from 20 A up to 40 A. They correspond to quality class 1, with respect to electrical and mechanical life time. The contact material is high quality Beryllium-Copper (CuBe treated) with gold-plated surface.

The high current jacks are joint separately to the connectors. To install them, carefully follow the assembly instructions. It is extremely important to solder cables, screw cable terminals or heat shrink sleeves to high current jacks first, before inserting them into the moulding. Paralleled converters should preferably be interconnected on current bars or at a star point.

Using screw versions, the two outer high current jacks may

be inserted at a 90° angle in order to prevent possible short circuits between the cable terminals, especially in applications with high vibration environment. Heat shrink sleeves might be necessary for further isolation purposes or to keep clearances and creepage distances at specified levels.

An extraction tool allows removal of the high current jacks for replacement (see fig. 15).

Caution: The use of an adequate cable strain relief device (e.g. Cable Hood etc.) is essential, in order to protect the high current contact jacks from damage. Never screw, solder or manipulate these contacts when the connector is plugged into the male connector! The use of highly flexible cables is strongly recommended.

This connector type (male version) is used in the following converter series (case size): PSK and PSS (K01), K (K02), P (Q04) with output currents ≥ 20 A.

Table 3: H15S2 and H15S4 Connector Survey

| Female connector type | Reference | Description of terminals | Fig. | Integrated coding |
|--------------------------------|-----------|--|------|-------------------|
| STV-H15 S2-FSF/CO | HZZ 00116 | 11 faston terminals 6.3 × 0.8 mm, 2 screw jacks ¹ | 10 | yes |
| STV-H15 S2-F/CO | HZZ 00115 | 11 faston terminals 6.3 × 0.8 mm, 2 solder jacks ¹ | (10) | yes |
| STV-H15 S4-FSF/CO | HZZ 00110 | 7 faston terminals 6.3 × 0.8 mm, 4 screw jacks ¹ | 12 | yes |
| STV-H15 S4-F/CO | HZZ 00105 | 7 faston terminals 6.3 × 0.8 mm, 4 solder jacks ¹ | (12) | yes |
| STV-H15 S4-FLS/CO ² | HZZ 00109 | 7 screw terminals 90°, 2.5 mm ² , torque ≤ 26.6 Ncm, 4 solder jacks ¹ | 13 | yes |
| STV-H15 S4-FSR/CO ² | HZZ 00108 | 7 screw terminals, 90°, 2.5 mm ² , torque ≤ 26.6 Ncm, 4 screw jacks ¹ | (13) | yes |

¹ Spare jacks are available on request: screw version YVM002, solder version XMB045.

² Not for new designs. Use female connectors with faston terminals instead.

Delivery content: H15S2 (S4) moulding, two (four) high current jacks and assembly instructions. Screw versions also include four M4 screws with washers and heat shrink sleeves.

Mechanical Dimensions (in mm)

Code Key System

An efficient coding system is of great importance and cannot be valued highly enough in complex electronic systems. Since power supplies handle high currents and voltages, any false connection could not only be extremely dangerous but also quite costly.

This integrated polarizing system allows effortless coding by the simple insertion of Coding Wedges into the female connector mouldings. The corresponding counter-parts, i.e., the coding tabs of the male moulding just have to be broken off to match the right female part. Major advantages are high mechanical stability and easy handling. The H11 connectors have 10 and the H15 connectors have 8 coding positions. Using 4 coding wedges results in 210 (H11) respectively 70 (H15) different coding possibilities. Coding wedges are available as accessories to female connectors with the following item number:

Description: Codierkeil (5X)
Reference: HZZ00202
Delivery content: 5 pcs.

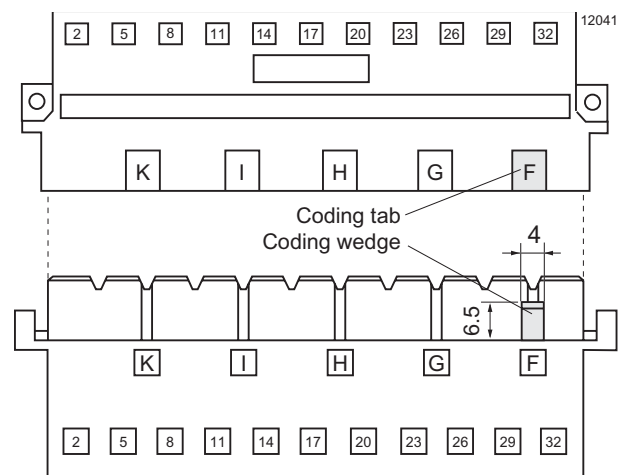

Fig. 14
Integrated code key system

Extraction Tool for High Current Contacts

High current plugs and jacks can be disassembled from the moulding by means of a special Extraction Tool (H15 S2, H15 S4). Holding the extraction tool over the centre of the connector's female contact the outer part of the extraction tool should be fed between the moulding and the outside of the female contact itself. This releases the spring clip fixing the contacts, in order to pull the contacts out of their moulding for replacement. If the operation is performed correctly very little force is required. Extreme care should be taken since incorrect procedure and excessive force could damage the tool and/or connector.

This tool is available as an accessory for both screw or solder high current contacts.

Note: In order to avoid damage, never manipulate high current contacts when plugged-in!

Description: Extraction tool
Reference: HZZ00150

Fig. 15
Extraction tool

Connector Retention Clips V

The retention clip V is an accessory which guarantees secure connection even under severe vibration, as for example in mobile applications. One connector retention system fits to almost all units and all of the aforementioned connector types.

The following converter series are delivered with pre-punched holes in the back plate for fast field-mounting of retention clips:

H, M, K, PSK, PSL, PSS, S and T (Q, LPC, P series only in combination with Mounting Plate Q [HZZ01215])

Description: Retentionclip (2x)
Reference: HZZ01209
Delivery content: 2 pcs.

Fig. 16
Connector retention clips

Connector Retention Brackets CRB

An alternative to the above mentioned retention clip V is the connector retention bracket. They are attached to the back plate by one screw each with a torque of 20 to 30 Ncm.

Table 5: Connector Retention Bracket Survey

| Connector series | Item number [Reference] | Delivery content |
|------------------------------------|-------------------------|-------------------------------------|
| H, M, PSL K, PSK S, PSS T | CRB-HKMS [HZZ01216] | 2 brackets 2 screws 2 washers |
| Q, P LPC | CRB-Q [HZZ01217] | |

Fig. 17
Connector retention bracket CRB

Cable Hood

A cable connector housing or cable hood is available for all female H15, H15S2 and H15S4 type connectors with faston terminals (not suited for screw terminals). It serves as a strain relief, isolates connections and protects cables.

Item number: KSG-H15/H15S4
Reference: HZZ00141
Delivery content: Housing shell, cable duct with covers, cable clip, cable boot and screws

If using the cable hood together with retention clips, a special version is available, where both sides of the hood are slightly modified in order to allow for insertion of the clips. The cable hood with retention clips has been tested to withstand vibrations according to IEC/EN 60068-2-6: 5 g, 7.5 h (2.5 h per axis).

Item number: KSG-H15/H15S4-V
Reference: HZZ00142
Delivery content: Housing shell, cable duct with covers, cable clip, cable boot and screws

Fig. 18
Cable hood for H15 and H15S4 connectors

Cable Hood Retention Brackets CHRB

The cable hood can also be fixed to the converter case with two U-shaped cable hood retention brackets.

Available for H, M, K, PSK, PSS, PSL, S, T series.

Item number: CHRB-KSG
Reference: HZZ01218
Delivery content: 2 brackets with 2 screws

Fig. 19
Cable hood retention bracket CHRB

NUCLEAR AND MEDICAL APPLICATIONS - Power-One products are not designed, intended for use in, or authorized for use as critical components in life support systems, equipment used in hazardous environments, or nuclear control systems without the express written consent of the respective divisional president of Power-One, Inc.

TECHNICAL REVISIONS - The appearance of products, including safety agency certifications pictured on labels, may change depending on the date manufactured. Specifications are subject to change without notice.
