General Description

The HMC407MS8G & HMC407MS8GE are high efficiency GaAs InGaP Heterojunction Bipolar Transistor (HBT) MMIC Power amplifiers which operate between 5 and 7 GHz. The amplifier requires no external matching to achieve operation and is thus truly 50 Ohm matched at input and output. The amplifier is packaged in a low cost, surface mount 8 leaded package with an exposed base for improved RF and thermal performance. The amplifier provides 15 dB of gain, +29 dBm of saturated power at 28% PAE from a +5.0V supply voltage. Power down capability is available to conserve current consumption when the amplifier is not in use.

Electrical Specifications, $T_A = +25^\circ \text{C}$, $V_s = 5\text{V}$, $V_{pd} = 5\text{V}$

Pin Descriptions

Pin Number	Function	Description	Interface Schematic
1	Vcc1	Power supply voltage for the first amplifier stage. An external bypass capacitor of 330 pF is required as shown in the application schematic.	
2	Vpd	Power control pin. For maximum power, this pin should be connected to 5.0V. A higher voltage is not recommended. For lower die current, this voltage can be reduced.	
3, 6, 7	GND	Ground: Backside of package has exposed metal ground slug that must be connected to ground thru a short path. Vias under the device are required.	
4	RFIN	This pin is AC coupled and matched to 50 Ohms from 5.0 to 7.0 GHz.	
5	RFOUT	This pin is AC coupled and matched to 50 Ohms from 5.0 to 7.0 GHz.	
8	Vcc2	Power supply voltage for the output amplifier stage. An external bypass capacitor of 330 pF is required. This capacitor should be placed no more than 20 mils from package lead.

[2] Circuit Board Material: Roger 4350

The circuit board used in the final application should use RF circuit design techniques. Signal lines should have 50 ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation board should be mounted to an appropriate heat sink. The evaluation circuit board shown is available from Hittite upon request.

Application Circuit

Note 1: Vcc1 and Vcc2 may be connected to a common Vcc.

Note 2: C2 should be located < 0.020" from Pin 8 (Vcc2).
