

ALS36 Series 85°C

RoHS
Compliant

- Imperial case sizes and terminals for the North American Market
- Long Life, 20000 hours at 85°C (U_r, I_r applied)
- High ripple current
- Excellent surge voltage capability
- Optimized designs available on request

APPLICATION	BASIC DESIGN
<ul style="list-style-type: none"> • Industrial and commercial applications. • Power supplies including switch mode. • UPS systems. • Variable speed drives. • Frequency Inverters. • Welding equipment. • Energy storage in pulse discharge applications. 	<p>The ALS36/37 series of screw terminal capacitors meets the requirements of the North American market. This range offers high CV per unit volume coupled with high ripple currents and long life performance. The ALS36/37 range is manufactured in China.</p>

SPECIFICATION																														
Standards	IEC 60384-4 Long Life Grade 40/85/56,																													
Capacitance range	150 – 470000 µF																													
Capacitance tolerance	–10 to +30%																													
Rated voltage U _R	25–500VDC																													
Surge voltage U _S	<table border="1"> <tr> <td>U_R</td> <td>25</td> <td>40</td> <td>50</td> <td>63</td> <td>75</td> <td>100</td> <td>160</td> <td>200</td> <td>250</td> <td>350</td> <td>400</td> <td>450</td> <td>500</td> </tr> <tr> <td>U_S</td> <td>30</td> <td>50</td> <td>65</td> <td>67</td> <td>95</td> <td>125</td> <td>200</td> <td>250</td> <td>300</td> <td>400</td> <td>450</td> <td>500</td> <td>550</td> </tr> </table>	U _R	25	40	50	63	75	100	160	200	250	350	400	450	500	U _S	30	50	65	67	95	125	200	250	300	400	450	500	550	Test Condition: ≤ 30s surge, 1000 cycles @ 25°C

Stud Mounting

Case Polarity

Due to the presence of electrolyte in the capacitor the aluminium can and stud mounting will essentially be at the same polarity as the negative terminal. We recommend that the stud and can are insulated (see accessories for insulating nuts)..

Terminal options (preferred options shown in bold**)

Mounting Style 6=plain or 7=stud 
Termination Style A,C,E,G,H,J,M or R 

OPERATIONAL DATA

Operational Lifetime
 Please see separate BHC application notes TD003 for calculating operational life expectancy under customer specific conditions.

RELIABILITY

The failure rate is derived from our periodic test results. The failure rate (λ_R) is therefore only given at test temperature for life tests. An estimation is also given at 40°C. The expected failure rate for this capacitor range is based on our periodic test results for capacitors with structural similarity. Failure rate is frequently quoted in FIT (Failures In Time) where 1 FIT = 1×10^{-9} failures per hour. Failure rates include both catastrophic and parametric failures

T_a	Failure rate per hour
85°C	250 FIT
40°C	12 FIT

MECHANICAL DATA

Mounting position
 The capacitor can be mounted in any position so long as the safety vent can operate. It is possible for some electrolyte to be expelled. As this is a conducting liquid, suitable precautions should be instigated by the system designer to avoid secondary short circuits.
 The capacitors are designed to be mounted in free air and are not suitable for submersion in liquid.

Vibration
 10Hz to 55Hz at 0.75mm or 10g for 3x2hrs duration. Except 220mm long cans 10Hz to 55Hz at 0.35mm or 5g for 3x0.5hrs duration.

Insulating resistance
 ≥ 100 Mohms at 100V d.c., across insulating sleeve.

Voltage Proof
 $\geq 2500V$ d.c., across insulating sleeve.

Safety vent
 A safety vent for over pressure is featured on terminal deck. This is in the form of a rubber plug designed to relieve build up of internal pressure due to over stress or catastrophic failure.
