⑥ Inductance

Expressed by three figures. The unit is micro-henry (μH). The first and second figures are significant digits, and the third figure expresses the number of zeros which follow the two figures. If there is a decimal point, it is expressed by the capital letter "R". In this case, all figures are significant digits. If inductance is less than $0.1 \mu\text{H}$, the inductance code is expressed by a combination of two figures and capital letter "N", and the unit of inductance is nano-henry (nH). The capital letter "N" indicates the unit of "nH", and also expresses a decimal point. In this case, all figures are significant digits.

⑦ Rated Current

Expressed by three figures. The unit is in amperes (A). A decimal point is expressed by the capital letter "R". In this case, all figures are significant digits.

Outline of EMI Suppression Filter (EMIFIL®) for AC Power Lines

EMI (Electro Magnetic Interference) suppression filter for AC power lines eliminate noise entering equipment from commercial power lines or noise generated from electronic equipment.

Common mode chokes, line bypass capacitors, across the line capacitors are generally used as AC EMI suppression filter device. In suppressing common mode noise, common mode chokes are most important devices. Because the characteristics of common mode chokes influences

performance of total filter block MURATA provides two types of common mode chokes. (Standard type, High frequency type)

Hybrid choke coil is high performance EMI suppression device which can suppress both common mode noise and differential mode noise at the same time. It is effective in AC power supplies with active device for higher harmonic countermeasure, which tend to emit relatively higher differential mode noise.

■ Classification of EMI Suppression Filter for AC Power Lines

Product Name	Appearance	Effective Frequency Range (Hz)						Application
		10k	100k	1M	10M	100M	1G

Hybrid Choke Coil 	 PLY10	■	■	■	■	■	■	Suppression of conduction noise in AC power line with active device for higher harmonic countermeasure. Suppression of AC power line noise which contains both common mode noise and differential mode noise.
Hybrid Choke Coil 	 PLY17	■	■	■	■	■	■	For AC power supply, AC adaptor. Set for low profile equipment.

Outline of EMI Suppression Filter (EMIFIL®) for AC Power Lines

Common Mode Choke Coil Standard Winding and Sectional Winding

Standard Winding

End of Winding

Beginning of Winding

High-frequency noise can pass through the Filter easily because both edges of coils are close as shown above

Standard Winding
Large inductance is available
→Highly Efficient in Low Frequency

Sectional Winding
Excellent performance in high frequency
Stray capacity between windings is low

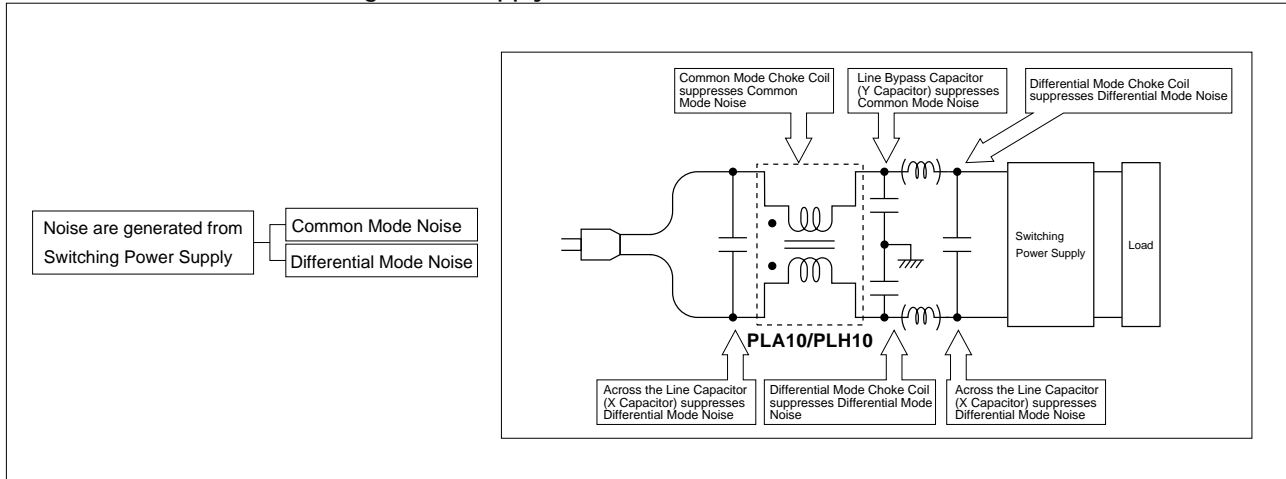

Sectional Winding

End of Winding

Beginning of Winding

High-frequency noise can hardly pass through the Filter because both edges of coil are not close as shown above

Noise Measures for Switching Power Supply

EMI Suppression Filters (EMIFIL®) for AC Power Lines

1

Common Mode Choke Coil

FKOB Series

The FKOB series is compact size AC common mode choke coil which uses toroidal type ferrite core.
 Its broad band frequency characteristic enables simple filter composition in relative low noise equipments.

Part Number	Common Mode Inductance (min.) (μH)	Rated Current (A)	Rated Voltage (V)	Insulation Resistance (min.) (M ohm)

PLA10 Series

The PLA10 series is a compact size AC common mode choke coil. It can obtain a high inductance value in spite of its compact size.

■ Features

1. Compact and light weight
2. Low profile in vertical core layout
3. Both a standard winding type and a sectional winding type for higher frequency noise are available.

● Standard Winding Type

EMI Suppression Filters (EMIFIL®) for AC Power Lines

Hybrid Choke Coil

2

PLY10 Series

The PLY10 is a compact and high performance hybrid choke coil which can handle differential mode noise caused by the harmonics currents regulation circuit as well as common mode noise. It can handle noise problems much more compactly than a combination of a conventional common mode choke coil and a differential mode choke coil.

■ Features

1. PLY10 has both functions of a common mode choke coil and a differential mode choke coil in its compact body.
2. Low profile in vertical core layout
3. PLY10 has the same pin layout as a general type common mode choke coil which enables it to replace conventional components.
4. Both a standard winding type and a sectional winding type for higher frequency noise are available.

■ EMI Problem for harmonics currents regulation

There are some methods meet harmonics currents regulations (IEC1000-3, EN60555-2) such as an active filter type and one converter type. However, they cause new EMI problems of differential mode noise because they use active components. For that reason, additional filter components to meet differential mode noise must be applied.

Noise Suppression Effect of PLY10 Series

The data shows noise suppression effects comparison PLY10 with existing common mode choke coil. (In AC adaptor of note PC)

2

• Noise Level

The filter circuit with hybrid choke coil has suppressed conducted noise as well as conventional filter in spite of its compact composition.

Common mode choke coil and differential mode choke coil are used.

Hybrid choke coil PLY10

⚠ Caution / Notice

■ **⚠ Caution (Rating)**

1. Rated Current

Operating current should not exceed the rated value. Even if operating current is under the rated value, adequate ventilation is required to avoid excessive heat generated within the product (choke coil) and from surrounding heat sources. If exceeding these conditions, excessive heat may cause fumes or permanent damage to the product. Please ensure that product (choke coil) is evaluated and confirmed against the specification when it is mounted in your final assembled product.
 -> Winding temperature should be less than 120 degree C.

*As for FKOB series winding temperature should be less than 95 degree C.

Maximum allowable temperature at the surface of coil (ambient temperature + winding temperature rise) is in accordance with each safety standard applicable to final assembled product.

When the temperature at winding exceeds maximum allowable temperature of safety standard, the rated current should be derated.

2. Inrush Current

Inrush current should not exceed 10 times rated current within 1/4 cycle of 50/60Hz commercial power line. Inrush current should be limited to a minimum of 10 seconds after last inrush.

If these conditions are exceeded, excessive heat may cause fumes or permanent damage to the component, or at worst cause ignition.

■ **Notice (Storage and Operating Condition)**

1. Soldering Conditions

(1) Flux, Solder

- Rosin-based flux should be used. Do not use strong acidic flux with halide content exceeding 0.2wt% (chlorine conversion value)
- Use 63/37 solder (Sn/Pb = 63/37) or 60/40 solder (Sn/Pb = 60/40). In case of lead-free solder, use Sn-3.0Ag-0.5Cu solder

(2) Flow soldering profile

Standard profile				Limit profile		
Sn/Pb = 60/40, Sn/Pb = 63/37		Sn-3.0Ag-0.5Cu solder				
Soldering temp.	Soldering time	Soldering temp.	Soldering time	Soldering temp.	Soldering time	Cycle of flow
240-260°C	5s max.	250±2°C	4-6s	265±3°C	5s	2 times

For additional mounting methods, please contact Murata.

■ **Notice (Soldering and Mounting)**

Magnetic Flux Leakage

Choke coils generate small amounts of magnetic flux leakage that may adversely affect equipment operation according to component arrangement. Testing should be completed on final assembly to ensure equipment performance is not affected.

2. Cleaning

Avoid cleaning product due to non-waterproof construction.

3. Storage and Handling Requirements

(1) Storage period

Product should be used within 12 months after receiving. Solderability should be checked if this period is exceeded.

(2) Storage conditions

Storage Temperature: -10 to 40 °C
 Relative humidity: 30 to 70%

Avoid sudden changes in temperature and humidity. Don't keep products in corrosive gases such as sulfur, chlorine gas or acid, or it may cause oxidation of lead terminals resulting in poor solderability or corrosion of component windings.

(3) Handling conditions

Care should be taken when transporting or handling product to avoid excessive vibration or mechanical shock.

■ **Notice (Rating)**

Coil Humming Noise

Magnetic flux generated between coil and core or between the choke coil windings creates repulsive power between the coil windings. This repulsive power causes the coil winding to vibrate and create a humming noise. The amount of hum produced by the coil is proportionate to the amount of harmonic distortion generated by the operating current. This does not influence the electrical performance of the coils, but it should be considered and tested in actual circuit application.

Packaging

■ Minimum Quantity

Part Number	Minimum Quantity (pcs.)	
	Magazine Package	Box
FKOB	-	100
PLA10	1800	1260
PLH10	1800	1260
PLY10	1800	1200
PLY17	1920	1080

△Note:

1. Export Control

〈For customers outside Japan〉

No muRata products should be used or sold, through any channels, for use in the design, development, production, utilization, maintenance or operation of, or otherwise contribution to (1) any weapons (Weapons of Mass Destruction (nuclear, chemical or biological weapons or missiles) or conventional weapons) or (2) goods or systems specially designed or intended for military end-use or utilization by military end-users.

〈For customers in Japan〉

For products which are controlled items subject to the "Foreign Exchange and Foreign Trade Law" of Japan, the export license specified by the law is required for export.

2. Please contact our sales representatives or product engineers before using the products in this catalog for the applications listed below, which require especially high reliability for the prevention of defects which might directly damage a third party's life, body or property, or when one of our products is intended for use in applications other than those specified in this catalog.

- | | |
|-----------------------------|--|
| ① Aircraft equipment | ② Aerospace equipment |
| ③ Undersea equipment | ④ Power plant equipment |
| ⑤ Medical equipment | ⑥ Transportation equipment (vehicles, trains, ships, etc.) |
| ⑦ Traffic signal equipment | ⑧ Disaster prevention / crime prevention equipment |
| ⑨ Data-processing equipment | ⑩ Application of similar complexity and/or reliability requirements to the applications listed above |

3. Product specifications in this catalog are as of January 2006. They are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before ordering. If there are any questions, please contact our sales representatives or product engineers.

4. Please read rating and △CAUTION (for storage, operating, rating, soldering, mounting and handling) in this catalog to prevent smoking and/or burning, etc.

5. This catalog has only typical specifications because there is no space for detailed specifications. Therefore, please approve our product specifications or transact the approval sheet for product specifications before ordering.

6. Please note that unless otherwise specified, we shall assume no responsibility whatsoever for any conflict or dispute that may occur in connection with the effect of our and/or a third party's intellectual property rights and other related rights in consideration of your use of our products and/or information described or contained in our catalogs. In this connection, no representation shall be made to the effect that any third parties are authorized to use the rights mentioned above under licenses without our consent.

7. No ozone depleting substances (ODS) under the Montreal Protocol are used in our manufacturing process.
