Features

- ✗ Integrated LNA, LO Buffer, Image Reject Mixer
- 🗙 7x7 mm, QFN
- ★ +2.0 dBm LO Drive Level
- ★ 2.7 dB Noise Figure
- X 20.0 dB Image Rejection
- Ճ 100% RF, DC and Noise Figure Testing

General Description

Mimix Broadband's 10.0-18.0 GHz GaAs packaged receiver has a noise figure of 2.7 dB and 20.0 dB image rejection across the band. This device is a two stage balanced LNA followed by an image reject sub-harmonic anti-parallel diode mixer and includes an integrated LO buffer amplifer. The image reject mixer eliminates the need for a bandpass filter after the LNA to remove thermal noise at the image frequency. I and Q mixer outputs are provided and an external 90 degree hybrid is required to select the desired sideband. This device uses Mimix Broadband's 0.15 µm GaAs PHEMT device model technology, and is based upon electron beam lithography to ensure high repeatability and uniformity. The device comes in a 7x7 mm QFN Surface Mount Laminate Package offering excellent RF and thermal properties and is RoHS compliant. This device is well suited for Millimeter-wave Point-to-Point Radio, LMDS, SATCOM and VSAT applications.

Absolute Maximum Ratings

	Supply Voltage (Vd)	+5.0 VDC
	Supply Current (Id1,Id2)	200, 250 mA
	Gate Bias Voltage (Vg)	+0.3 VDC
$\langle \rangle$	Input Power (RF Pin)	+17 dBm
	Storage Temperature (Tstg)	-65 to +165 ^O C
	Operating Temperature (Ta)	-55 to MTTF Table ³
	Channel Temperature (Tch)	MTTF Table ³

(3) Channel temperature affects a device's MTTF. It is recommended to keep channel temperature as low as possible for maximum life.

App Note [1] Biasing - The device is operated by separately biasing Vd1 and Vd2 with Vd1=4.0V, Id1=80mA and Vd2=4.0V, Id2=100mA. It is also recommended to use active biasing to keep the currents constant as the RF power and temperature vary; this gives the most reproducible results. Depending on the supply voltage available and the power dissipation constraints, the bias circuit may be a single transistor or a low power operational amplifier, with a low value resistor in series with the drain supply used to sense the current. The gate of the pHEMT is controlled to maintain correct drain current and thus drain voltage. The typical gate voltage needed to do this is -0.3V. Typically the gate is protected with Silicon diodes to limit the applied voltage. Also, make sure to sequence the applied voltage to ensure negative gate bias is available before applying the positive drain supply.

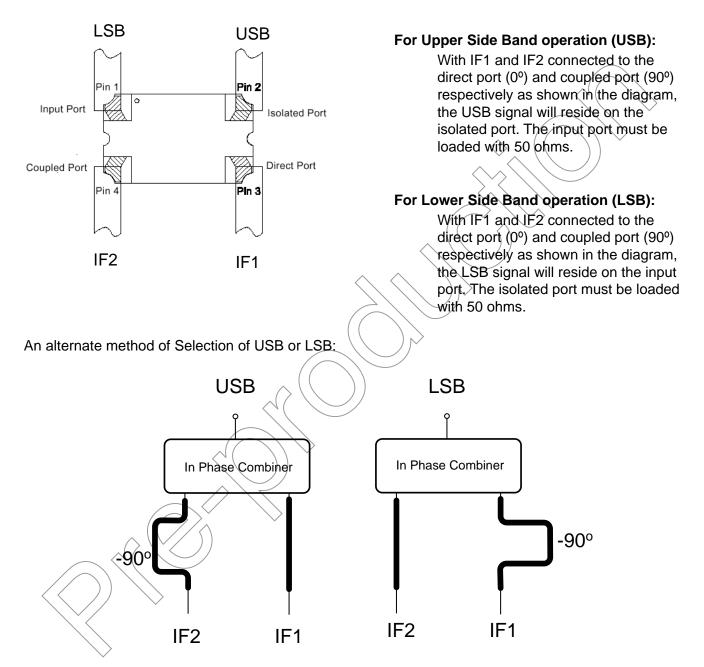

Mimix Broadband's 10.0-18.0 GHz XR1007-QD GaAs Receiver can be used in saturated radio applications and linear modulation schemes up to 256 QAM. The receiver can be used in upper and lower sideband applications from 10.0-18.0 GHz.

Handling and Assembly Information

CAUTION! - Mimix Broadband MMIC Products contain gallium arsenide (GaAs) which can be hazardous to the human body and the environment. For safety, observe the following procedures:

- Do not ingest.
- Do not alter the form of this product into a gas, powder, or liquid through burning, crushing, or chemical processing as these by-products are dangerous to the human body if inhaled, ingested, or swallowed.
- Observe government laws and company regulations when discarding this product. This product must be discarded in accordance with methods specified by applicable hazardous waste procedures.

Life Support Policy - Mimix Broadband's products are not authorized for use as critical components in life support devices or systems without the express written approval of the President and General Counsel of Mimix Broadband. As used herein: (1) Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user. (2) A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

Package Attachment - This packaged product from Mimix Broadband is provided as a rugged surface mount package compatible with high volume solder installation. The package is a low-cost plastic package. Vacuum tools or other suitable pick and place equipment may be used to pick and place this part. Care should be taken to ensure that there are no voids or gaps in the solder connection so that good RF, DC and ground connections are maintained. Voids or gaps can eventually lead not only to RF performance degradation, but reduced reliability and life of the product due to thermal stress.

Typical Reflow Profiles			
Reflow Profile	SnPb	Pb Free	
Ramp Up Rate	3-4 °C/sec	3-4 °C/sec	
Activation Time and Temperature	60-12 0 se c @ 140-160 °C	60-180 sec @ 170-200 ℃	
Time Above Melting Point	60-150 sec	60-150 sec	
Max Peak Temperature	240 °C	265 °C	
Time Within 5 °C of Peak	10-20 sec	10-20 sec	
Ramp Down Rate	4-6 °C/sec	4-6 ℃/sec	

Mimix Lead-Free RoHS Compliant Program - Mimix has an active program in place to meet customer and governmental requirements for eliminating lead (Pb) and other environmentally hazardous materials from our products. All Mimix RoHS compliant components are form, fit and functional replacements for their non-RoHS equivalents. Lead plating of our RoHS compliant parts is 100% matt tin (Sh) over copper alloy and is backwards compatible with current standard SnPb low-temperature reflow processes as well as higher temperature (260°C reflow) "Pb Free" processes.

Part Number for Ordering Description

XR1007-QD-0N00	Ni/Au plated RoHS compliant QFN 7x7 44L surface mount package in bulk quantity
XR1007-QD-0N0T	Ni/Au plated RoHS compliant QFN 7x7 44L surface mount package in tape and reel
XR1007-QD-EV1	XR1007-QD Evaluation Module

We also offer this part with alternative plating options. Please contact your regional sales manager for more information regarding different plating types.
