

5-V Voltage Regulator

TLE 4286 G

Features

- Wide operation range: 6.2 V to 42 V
- Wide temperature range: – 40 °C to 150 °C
- Low quiescent current consumption: 50 μ A
- Output protected against short circuit
- Over-temperature protection
- Inhibit input
- Very low current consumption in stand-by (Inhibit) mode
- Very small SMD-Package SCT-595

Functional Description

The **TLE 4286 G** is a 5-V low-drop fixed voltage regulator in the very small SMD package SCT-595. The maximum input voltage is 42 V. The output is able to drive a load of more than 10 mA while it regulates the output voltage within a 4% accuracy.

The device can be switched in stand-by mode via an inhibit input which causes the current consumption to drop below 1 μ A.

A temperature protection that disables the circuit at over temperature is incorporated.

Pin Definitions and Functions

Pin No.	Symbol	Function
1	INH	Inhibit input ; H for active ($V_Q = 5\text{ V}$) and L for stand-by
2	GND	Ground ; internally connected to pin 5
3	I	Input voltage
4	Q	Output voltage ; must be blocked by a capacitor $C_Q \geq 1\ \mu\text{F}$, $\text{ESR} \leq 10\ \Omega$ to GND
5	GND	Ground ; internally connected to pin 2
