

GENERAL DESCRIPTION

The CM2838 family is a positive voltage linear regulator developed utilizing CMOS technology featured low quiescent current (30 μ A typ.), low dropout voltage, and high output voltage accuracy, making them ideal for battery applications. EN input connected to CMOS has low bias current. The space-saving SOT-23-5 package is attractive for "Pocket" and "Hand Held" applications.

These rugged devices have both Thermal Shutdown, and Current limit to prevent device failure under the "Worst" of operating conditions.

In application requiring a low noise, regulated supply, place a 1000pF capacitor between Bypass and Ground.

The CM2838 is stable with a Low ESR output capacitance of 1.0 μ F or greater.

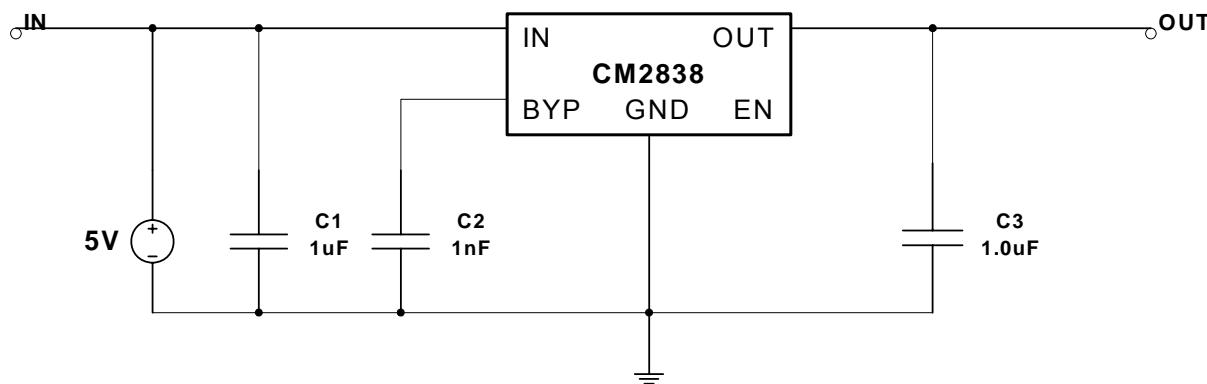

FEATURES

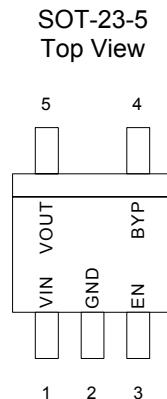

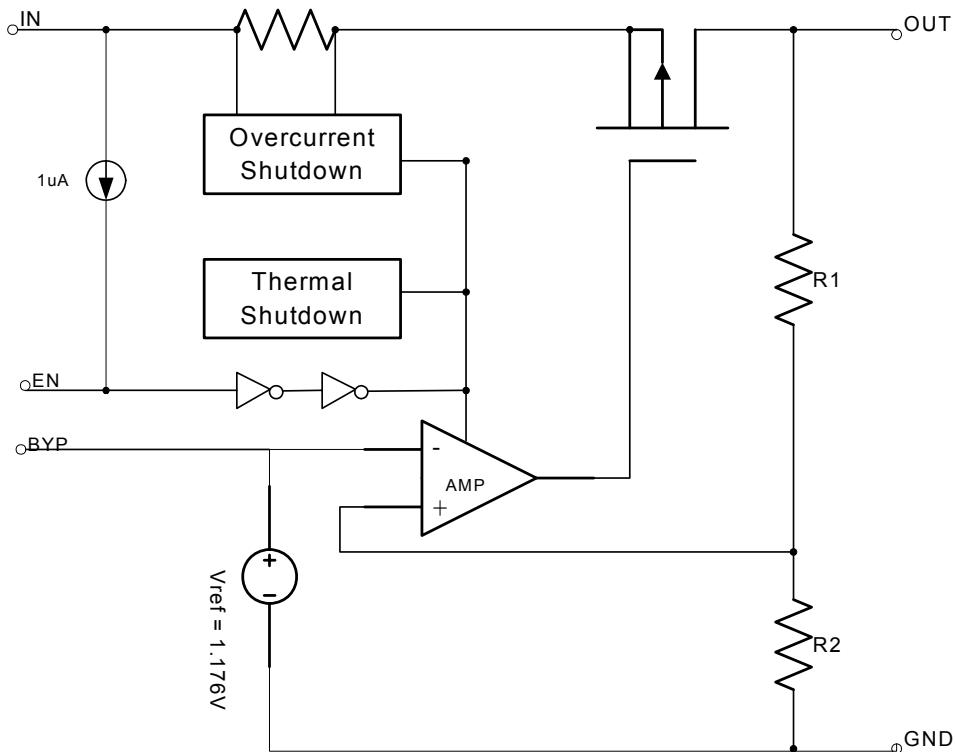

- ◆ Very Low Dropout Voltage
- ◆ Low Current Consumption: Typ. 30 μ A, Max. 35 μ A
- ◆ Output Voltage: 1.8V, 2.5V, 2.8V, 3.0V, and 3.3V
- ◆ High Accuracy Output Voltage: +/- 1.5%
- ◆ Guaranteed 300mA Output
- ◆ Input Range up to 7.0V
- ◆ Thermal Shutdown
- ◆ Current Limiting
- ◆ Stability with Low ESR Capacitors
- ◆ Compact Package: SOT-23-5
- ◆ Factory Pre-set Output Voltages
- ◆ Low Temperature Coefficient

APPLICATIONS

- ◆ Battery-powered devices
- ◆ Personal communication devices
- ◆ Home electric/electronic appliances
- ◆ PC peripherals

DETAILED DESCRIPTION

The CM2838 family of CMOS regulators contain a PMOS pass transistor, voltage reference, error amplifier, over-current protection, thermal shutdown.

The P-channel pass transistor receives data from the error amplifier, over-current protection, and thermal protection circuits. During normal operation, the error amplifier compares the output voltage to a precision reference. Over-current and Thermal shutdown circuits become active when the junction temperature exceeds 150°C, or the current exceeds 300mA. During thermal shutdown, the output voltage remains low. Normal operation is restored when the junction temperature drops below 120°C.

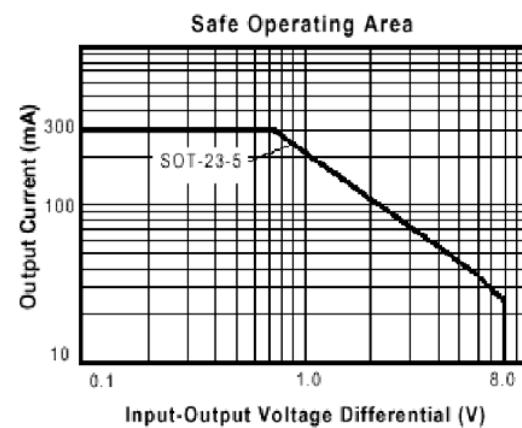

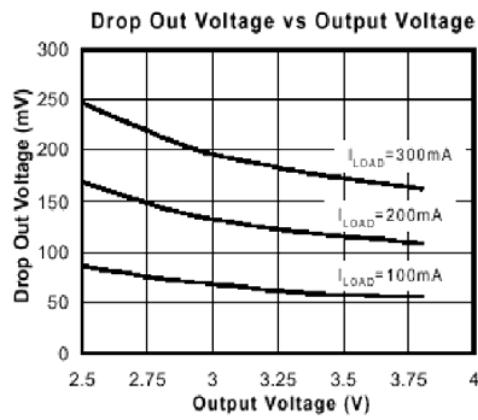

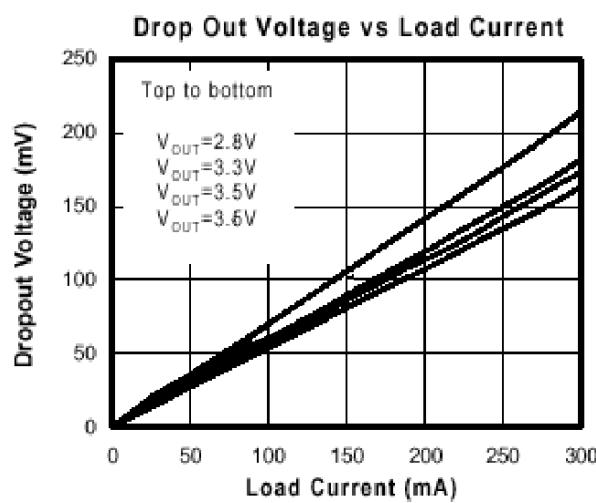

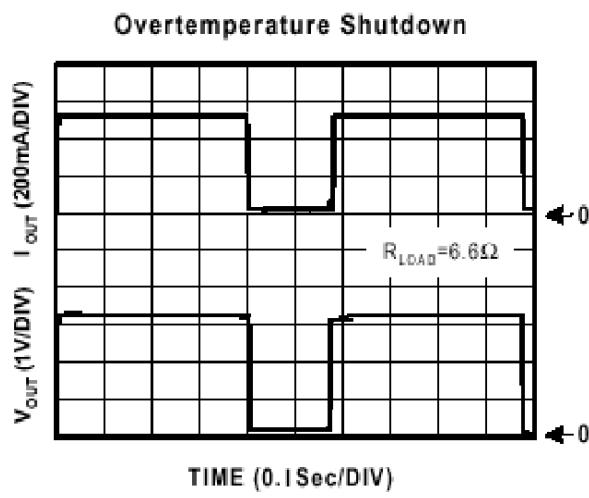

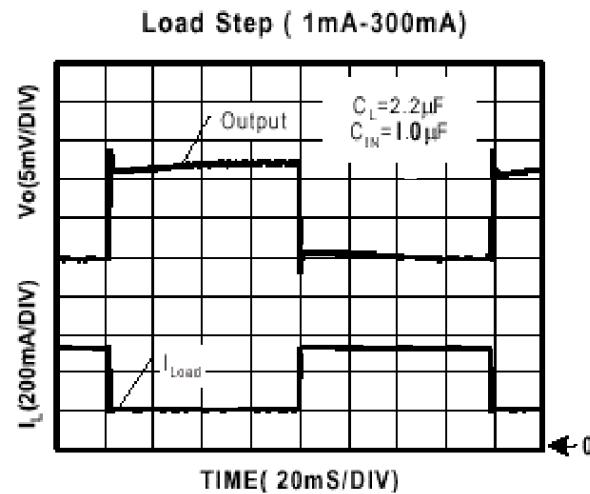

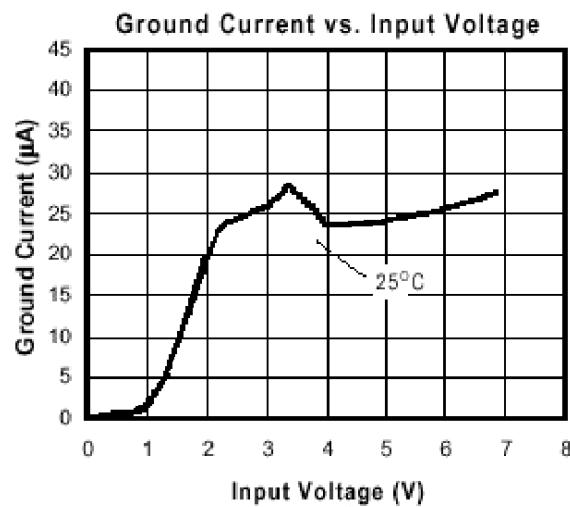

The CM2838 switches from voltage mode to current mode when the load exceeds the rated output current. This prevents over-stress.

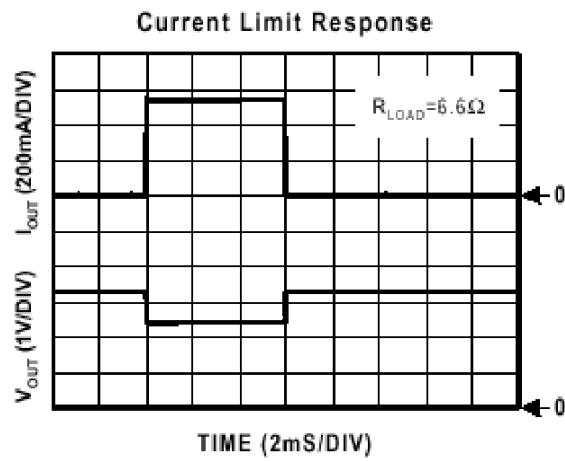

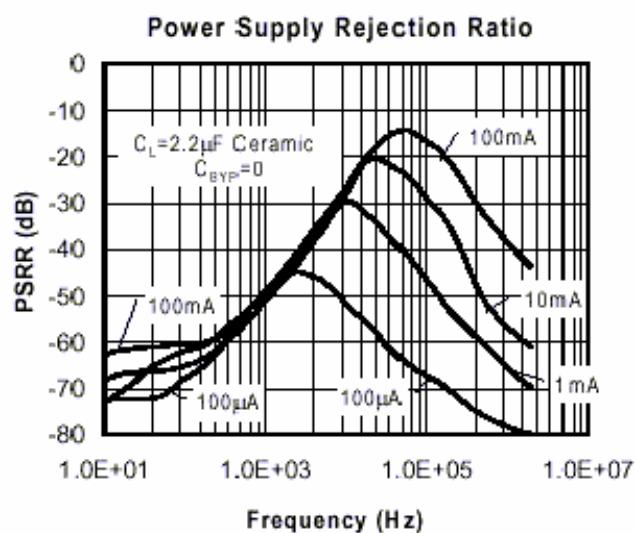

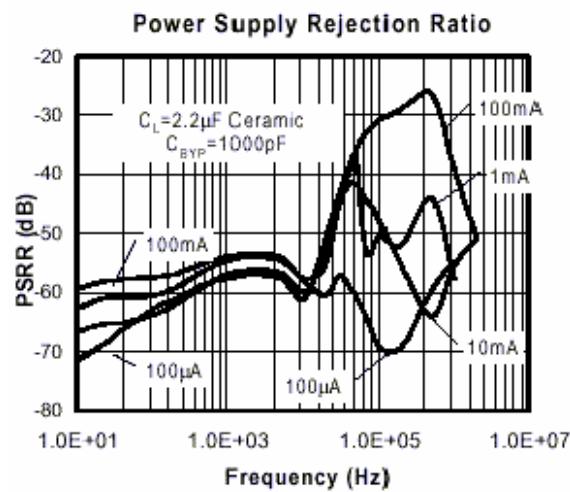

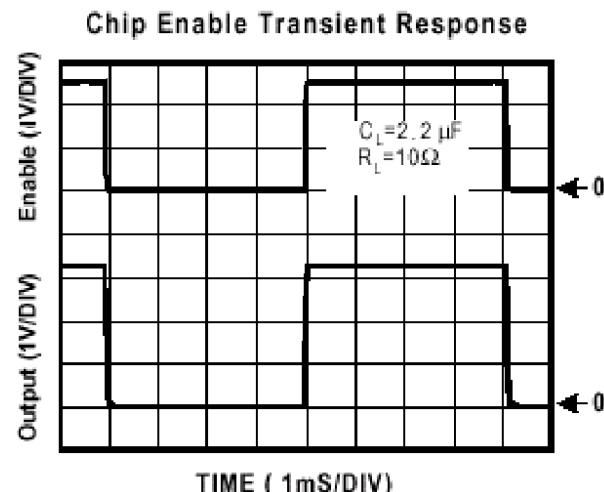

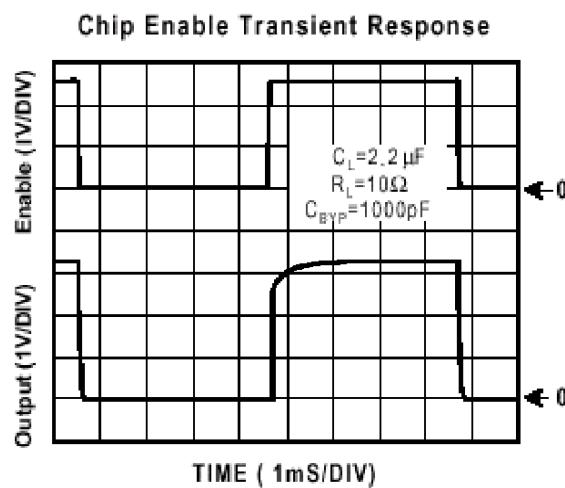

ENABLE

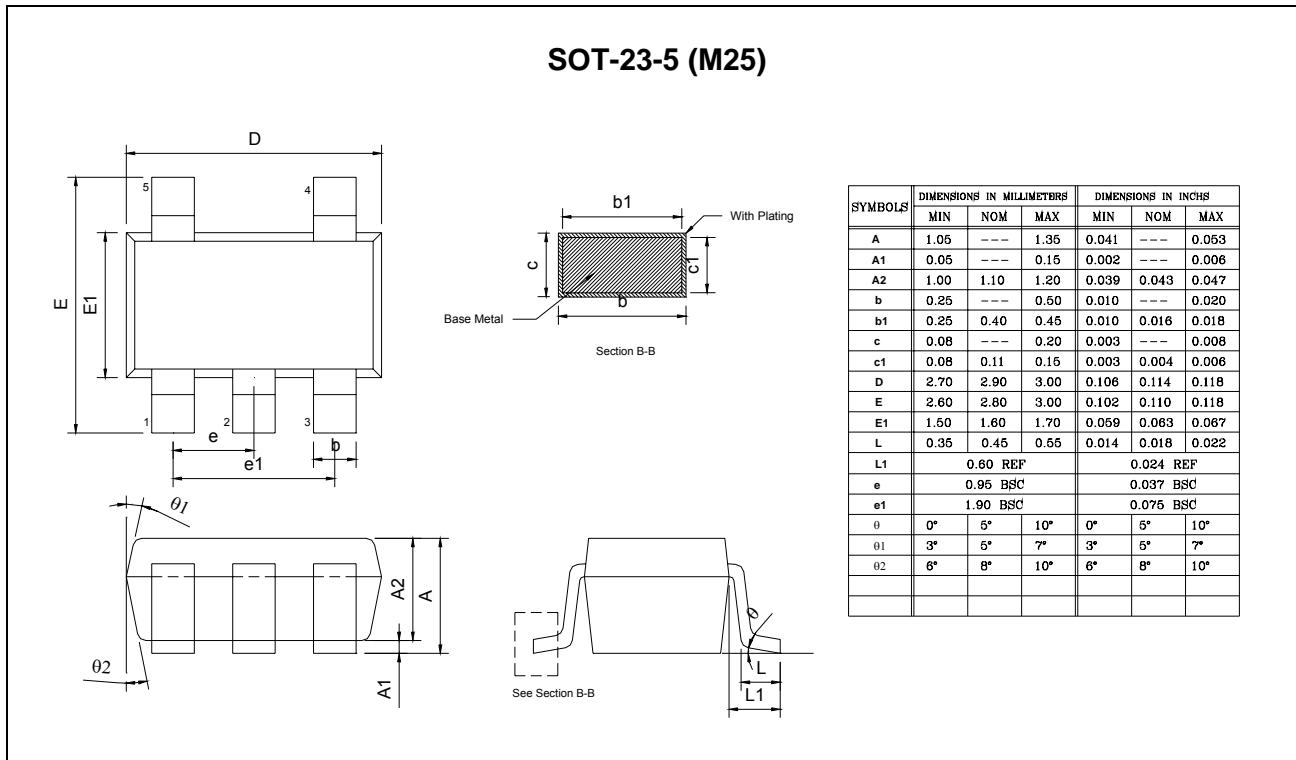

The Enable pin normally floats high. When actively pulled low, the PMOS pass transistor shut off, and all internal circuits are powered down. In this state, the quiescent current is less than 2µA. This pin behaves much like an electronic switch.

EXTERNAL CAPACITOR

The CM2838 is stable with a Low ESR output capacitor to ground of 1.0µF or greater. It can keep stable even with higher ESR capacitors. A second capacitor is recommended between the input and ground to stabilize VIN. The input capacitor should be larger than 0.1µF to have a beneficial effect. All capacitors should be placed in close proximity to the pins. A “quiet” ground termination is desirable.
