

LM2639

5-Bit Programmable, High Frequency Multi-phase PWM Controller

General Description

The LM2639 provides an attractive solution for power supplies of high power microprocessors (such as Pentium II™, M II™, K6™-2, K6™-3, etc.) exhibiting ultra fast load transients. Compared to a conventional single-phase supply, an LM2639 based multi-phase supply distributes the thermal and electrical loading among components in multiple phases and greatly reduces the corresponding stress in each component. The LM2639 can be programmed to control either a 3-phase converter or a 4-phase converter. Phase shift among the phases is 120° in the case of three phase and 90° with four-phase. Because the power channels are out of phase, there can be significant ripple cancellation for both the input and output current, resulting in reduced input and output capacitor size. Due to the nominal operating frequency of 2 MHz per phase, the size of the output inductors can be greatly reduced which results in a much faster load transient response and a dramatically shrunk output capacitor bank. Microprocessor power supplies with all surface mount components can be easily built.

The internal high speed transconductance amplifier guarantees good dynamic performance. The output drive voltages can be adjusted through a resistor divider to control switching loss in the external FETs.

The internal master clock frequency of up to 8 MHz is set by an external reference resistor. An external clock of 10 MHz can also be used to drive the chip to achieve frequency control and multi-chip operation.

The LM2639 also provides input under-voltage lock-out with hysteresis and input over-current protection.

Features

- Ultra fast load transient response
- Enables all surface-mount-design
- Selectable 2, 3, 4 phase operation
- Clock frequency from 40 kHz to 10 MHz
- Precision load current sharing
- 5-bit programmable from 3.5V to 1.3V
- VID code compatible to VRM 8.X specification
- Output voltage is 2.0V for VID code 11111
- Selectable internal or external clock
- Digital 16-step soft start
- Input under-voltage lock-out, over-current protection

Applications

- Servers and workstations
- High current, ultra-fast transient microprocessors

Note 1: Absolute Maximum Ratings are limits beyond which damage to the device may occur. **Operating ratings** do not imply guaranteed performance limits.

Note 2: Maximum allowable power dissipation is a function of the maximum junction temperature, T_{JMAX} , the junction-to-ambient thermal resistance, θ_{JA} , and the ambient temperature, T_A . The maximum allowable power dissipation at any ambient temperature is calculated using: $P_{MAX} = (T_{JMAX} - T_A)/\theta_{JA}$. The junction-to-ambient thermal resistance, θ_{JA} , for LM2639 is $78^\circ C/W$. For a T_{JMAX} of $150^\circ C$ and T_A of $25^\circ C$, the maximum allowable power dissipation is 1.6W.

Note 3: The letter **N** stands for the typical output voltages appearing in **italic boldface** type in *Table 1*.

Note 4: Max value of logic low means any voltage below this value is guaranteed to be taken as logic low whereas a voltage higher than this value is not guaranteed to be taken as a logic low.

Note 5: Min value of logic high means any voltage above this value is guaranteed to be taken as logic high whereas a voltage lower than this value is not guaranteed to be taken as a logic high.

Note 6: When driving bipolar FET drivers in the typical application circuit.

Note 7: When V_{cc12V} pin goes below this voltage, all DRV pins go to 0V.

Note 8: ESD ratings for pins DRV0, DRV1, DRV2 and DRV3 is 1kV. ESD rating for all other pins is 2kV.

Pin Description

Pin	Pin Name	Pin Function
1	Vcc5V	Supply Voltage Input (5V nominal)
2	Divsel	Selects Phase Mode. Logic low selects 4 phase. Logic high selects 3 phase. 2 phase operation is achieved by using 2 outputs in 4 phase mode.
3	Clksel	Clock Select: Logic high selects internal clock. Logic low selects external clock.
4	Extclk	External Clock Input. Output frequency = Clock Input / No. of Phases. Connect to Vcc5V to select internal clock.
5	Rref	Connects to external reference resistor. Sets the operating frequency of the internal clock and the ramp time for the PWM. Reference voltage at this pin is 1.26V.
6	Vid0	5-Bit DAC Input (LSB).
7	Vid1	5-Bit DAC Input.
8	Vid2	5-Bit DAC Input.
9	Vid3	5-Bit DAC Input.
10	Vid4	5-Bit DAC Input (MSB)
11	OC+	Over-current Comparator. Non-inverting input.
12	OC-	Over-current Comparator. Inverting input.
13	COMP	Compensation Pin. This is the output of the internal transconductance amplifier. Compensation network should be connected between this pin and feedback ground FBG.
14	FB	Feedback Input. Normally Kelvin connected to supply output.
15	Bgout	Current Limit Flag. Goes to logic low when current limit is activated. When over-current condition is removed, this pin is weakly pulled up to Vcc5V.
16	FBG	Feedback Ground. This pin should be connected to the ground at the supply output.
17	ENABLE	Output Enable Pin. Tie to logic high to enable and logic low to disable.
18	GND	Power Ground Pin.
19	DRV2	Phase 2 Output.
20	DRV0	Phase 0 Output.
21	Vcc12V	Supply Voltage for FET Drivers DRV0:3.
22	DRV1	Phase 1 Output.
23	DRV3	Phase 3 Output.
24	OutV	Sets the maximum DRV0:3 drive voltage to reduce switching loss in external FET's.

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
