

HBS-Compatible Driver and Receiver Monolithic IC MM1192

Outline

This IC conforms to the HBS (Home Bus) specification (Electronic Industries Association of Japan), and has functions for the reception and transmission of data. AMI is adopted for the waveforms of signals handled by the transmission and reception units, designed for connection to twisted-pair lines.

The IC can be driven by a single 5V power supply, and incorporates an output transistor to reduce the number of external components required.

Telephone equipment, security devices, audio or video equipment, air-conditioning equipment, and a wide range of other devices can be connected to a bus line to enable mutual communications.

Features

1. Compact design
2. High reliability
3. Replaces pulse transformers
4. Can be driven by a single 5V power supply
5. Low cost
6. Easy circuit design
7. Few external components

Applications

1. Telephony equipment
2. Security equipment
3. Audio and video devices
4. Air-conditioning equipment
5. Wide range of other equipment and devices

Package

DIP-16B (MM1192XD)

Block Diagram

Pin Assignment

1	Reception DATA OUT	9	OUT (A)
2	V _{IN}	10	OUT (B)
3	Boost capacitor pin	11	V _{CC}
4	Boost capacitor pin	12	COLLECTOR (b)
5	RESET	13	GND
6	DATA IN	14	COLLECTOR (a)
7	out (b)	15	IN (2)
8	out (a)	16	IN (1)

Absolute Maximum Ratings (Ta=25°C)

Item	Symbol	Ratings	Units
Storage temperature	T _{STG}	-40~+125	°C
Operating temperature	T _{OPR}	-20~+70	°C
Power supply voltage	V _{CC} max.	-0.3~+7	V
Operating power supply voltage	V _{CCOP}	4.5~5.5	V
Allowable loss	P _d	450	mW
Recommended power supply voltage range	V _{CCOP2}	4.75~5.25	V
Bias voltage range (V _{IN})	V _{INOP}	8.0~40	V

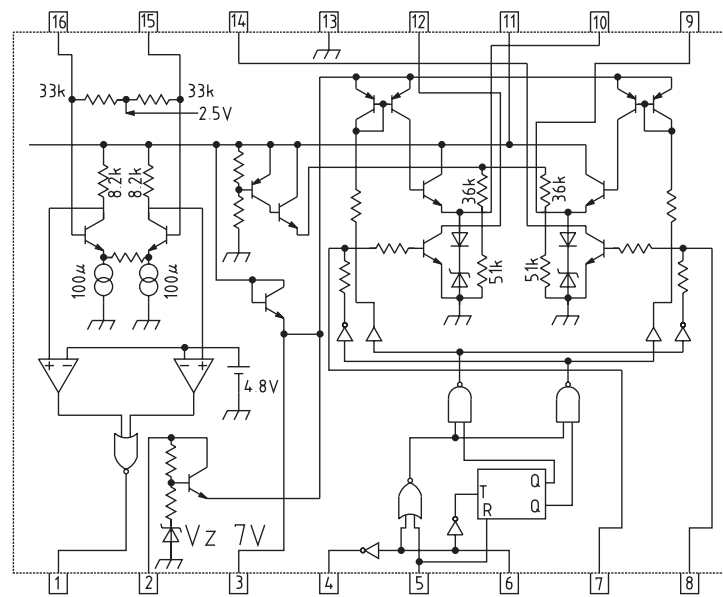

Electrical Characteristics (Except where noted otherwise, Ta=25°C, V_{CC}=5V, F_{transmit}=10kHz (DUTY=50%) R_L=36Ω)

Item	Symbol	Measurement conditions	Min.	Typ.	Max.	Units
Transmission Circuits	Power supply current 1	ICCO No signal (5PIN="H")		8	13	mA
	Power supply current 2	ICCON In transmission FL=10kHz, RL=36Ω		75	90	mA
	Transmission output voltage	V _{TO} Both pins 9 and 10	3.8	4.2	4.6	V _{P-P}
	Transmission waveform symmetry	V _{TR} V _{TO1} /V _{TO2}	0.75	1.0	1.25	
	Reception sensitivity	V _{RS}	0.65	0.75	0.85	V _{P-P}
	Noise resistance	V _{RN} Level at which no errors are output	0.55			V _{P-P}
	Input impedance	R _{IN} Both pins 15 and 16	25	36	46	kΩ
	Transmission delay time 1	T _{d1} cf. transmit/receive waveform diagrams		0.4		μS
	Transmission delay time 2	T _{d2} cf. transmit/receive waveform diagrams		0.5		μS
	Transmission delay time 3	T _{d3} cf. transmit/receive waveform diagrams		1.0		μS
	Transmission delay time 4	T _{d4} cf. transmit/receive waveform diagrams		1.2		μS
	Reception output H voltage	V _{ROH}	4.5			V
	Reception output L voltage	V _{ROL}			0.5	V
	Transmission waveform LOSS 1	V _{TLS1} V _T =5V applied, power on	4.5			V
	Transmission waveform LOSS 2	V _{TLS2} V _T =5V applied, power off	4.5			V
	H level input voltage	V _{LH}	2.4			V
	L level input voltage	V _{LIL}			0.6	V
	H level input current	I _{LH} V _{DATA IN} =2.4V			10	μA
	L level input current	I _{LIL} V _{DATA IN} =0.4V			-300	μA
	Bootstrap output H voltage	V _{BR}	7.5	8.0		V

When a negative voltage is applied to pins 7, 8, 9 and 10, there should be no abnormal operation of internal circuits between 0 and 6V. However, if a negative voltage exceeding -6V is applied, thyristor operation may result, so it is recommended that an external clamping diode be added.

In addition, no measures have been taken for a negative voltage at pins 12 and 14. Hence if a negative voltage is applied to pins 12 and 14, the internal transistor should not be used.

Circuit Diagram

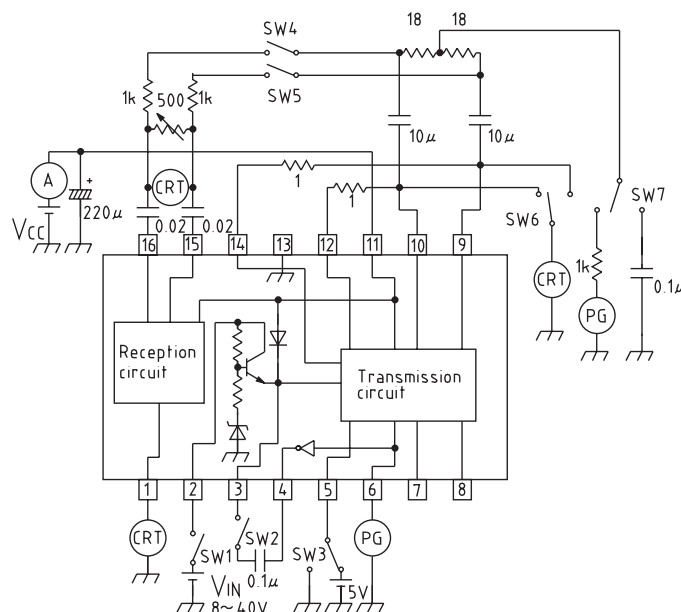

Note 1: The peripheral components in the block diagram are the constants for $F_{\text{transmit}}=10\text{kHz}$. If the frequency is low, larger values should be chosen for the coupling capacitors between the receive and transmit pins and the bus line and for the capacitor connecting pins 3 and 4.

Note 2: A block diagram is shown for an example application in which an external transistor is used; but depending on system conditions the internal transistor may be used, and no external transistor is needed. In such cases pins 7 and 8 are left open, a 1Ω resistance is inserted between pins 10 and 12, and a 1Ω resistance is inserted between pins 9 and 14.

When the load resistance (36Ω) is to be varied during use, these resistances (1Ω) should be changed according to the load resistance. If these resistances are omitted, oscillation may occur at low volume levels.

Measuring Circuit

1. No external transistor
