

**Low EMI Spread Spectrum Multiplier IC (in Die or Package)**

**FEATURES**

- Spread Spectrum Clock Generator/Multiplier with output selectable from 1x to 8x.
- 13MHz to 240MHz output with output enable.
- 13MHz to 30 MHz reference input frequency accepted from crystal or external clock signal.
- Reduced EMI from Spread Spectrum Modulation, with selectable modulation amplitude for Center Spread, Down Spread or Asymmetric Spread.
- TTL/CMOS compatible outputs.
- 3.3V Operating Voltage.
- 150 ps maximum cycle-to-cycle jitter.
- Available in 16-Pin 150mil SSOP or DIE.

**DESCRIPTION**

The PLL701-10 is a low EMI Clock Generator and Multiplier for high-speed digital systems. It uses Spread Spectrum Technology (SST) and permits different levels of EMI reduction by selecting the amplitude of the applied SST. The SST feature can be turned off. An output enable input is also used. The chip operates with input frequencies ranging from 13 to 30 MHz and provides 1x to 8x at its output.

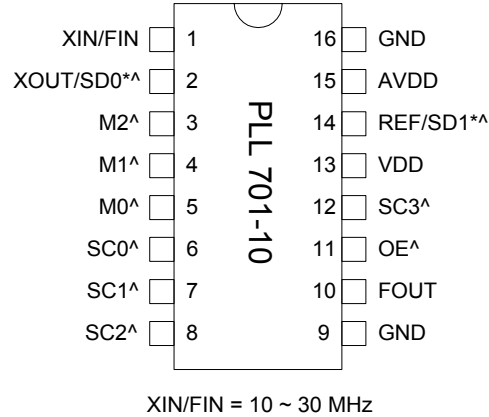

**OUTPUT CLOCK (FOUT) SELECTION**

M2	M1	M0	FIN/XIN (MHz)	Multiplier	FOUT (MHz)
0	0	0	13 ~ 28	X1	13 ~ 28
0	0	1	13 ~ 28	X2	26 ~ 56
0	1	0	14 ~ 30	X3	42 ~ 90
0	1	1	13 ~ 28	X4	52 ~ 112
1	0	0	20 ~ 30	X5	100 ~ 150
1	0	1	17 ~ 30	X6	102 ~ 180
1	1	0	15 ~ 30	X7	105 ~ 210
1	1	1	13 ~ 28	X8	104 ~ 224

### PIN/PAD DESCRIPTIONS

Name	Pin #	Pad #	Type	Description
XIN/FIN	1	22	I	Crystal input to be connected to fundamental parallel mode crystal. ( $C_L=20\text{pF}$ ) or clock input.
XOUT/SD0	2	23	B	At power-up, this pin is acts as input pin to select the modulation rate and is latched in. After the input sampling, it is used as crystal output connector. $120\text{k}\Omega$ internal pull up resistor.
M2	3	28	I	Digital control input to select output frequency. $30\text{k}\Omega$ internal pull-up.
M1	4	29	I	Digital control input to select output frequency. $30\text{k}\Omega$ internal pull-up.
M0	5	30	I	Digital control input to select output frequency. $30\text{k}\Omega$ internal pull-up.
SC0	6	34	I	Digital control input to select spread spectrum modulation. $30\text{k}\Omega$ internal pull-up.
SC1	7	35	I	Digital control input to select spread spectrum modulation. $30\text{k}\Omega$ internal pull-up.
SC2	8	1	I	Digital control input to select spread spectrum modulation. $30\text{k}\Omega$ internal pull-up.
SC3	12	12	I	Digital control input to select spread spectrum modulation. $30\text{k}\Omega$ internal pull-up.
FOUT	10	8	O	Modulated Clock Frequency Output. The frequency before modulation is synthesized by multiplying the input frequency by 1X to 8X, depending on SD(0:1) and SC(0:3).
OE	11	10	I	Output Enable. When low, Tri-states all outputs. $30\text{k}\Omega$ internal pull-up.
VDD	13	13,14,15	P	3.3V Power Supply.
REF/SD1	14	16	B	At power-up, this pin acts as input pin to select the modulation rate and is latched in. After the input sampling, this pin provides a buffered Reference Clock Output of the same frequency as the crystal or clock input. $30\text{k}\Omega$ internal pull-up.
AVDD	15	17,18,19	P	3.3V Analog power supply.
GNDOSC	N/A	25	P	Ground for Oscillator circuitry.
GNDBUF	N/A	7	P	Ground for output buffer circuitry.
GND	9 and 16	4,5,6,20,21	P	Ground.

Notes: B – bi-directional pin; I – input pin; P – power supply/ground pin.

Thickness	10 mil

**Low EMI Spread Spectrum Multiplier IC (in Die or Package)**

**FUNCTIONAL DESCRIPTION**

**Selectable spread spectrum and modulation rates**

The PLL701-10 provides selectable multiplier factors (1x to 8X), selectable spread spectrum modulation, as well as selectable modulation rate. Selection is made by connecting specific input pins to a logical “zero” or “one”. Pins 6 (SC0), 7 (SC1), 8 (SC2) and 12 (SC3) are used as inputs to select the spread spectrum modulation as shown on the spread spectrum selection table (page 2). Pins 3 (M2), 4 (M1), 5 (M0) are used as inputs to select the output frequency as shown on the output clock selection table (page 1). Pin 11 is the output enable pin, that tri-states all outputs when low (logical “zero”).

In order to reduce the number of pins on the chip, the PLL701-10 uses pin 2 and 14 (XOUT/SD0 and REF/SD1) as a bi-directional pin. The pins serve as modulation rate selector inputs (SD0 and SD1) upon power-up (see modulation rate table on page 1), and as XOUT crystal connection (pin 2), and REF output signal (pin 14) as soon as the inputs have been latched.

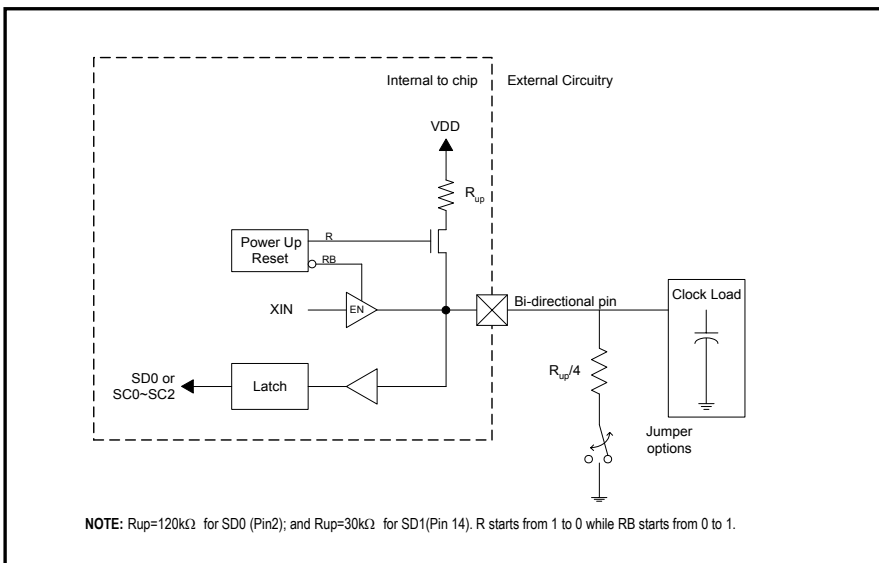

**Connecting a selection pin to a logical “one”**

All selection pins have an internal pull-up resistor (30kΩ for pins 3, 4, 5, 6, 7, 8, 11, 12, 14 and 120kΩ for pin 2). This internal pull-up resistor will pull the input value to a logical “one” (pull-up) by default, i.e. when no resistive load is connected between the pin and GND. No external pull-up resistor is therefore required for connecting a logical “one” upon power-up.

**Connecting a selection pin to a logical “zero”**

For an input only pin, i.e. all input pins except XOUT/SD0 (pin 2) and REF/SD1 (pin 14), the pin simply needs to be grounded to pull the input down to a logical “zero”. Connecting the bi-directional pins (SD0 and SD1) to a logical “zero” will however require the use of an external loading resistor between the pin and GND that has to be sufficiently small (compared to the internal pull-up resistor) so that the pin voltage be pulled below 0.8V (logical “zero”). In order to avoid loading effects when the pin serves as output, the value of the external pull-down resistor should however be kept as large as possible. In general, it is recommended to use an external resistor of around  $R_{up}/4$  (e.g. 27kΩ for pin 2 and 4.7kΩ for pin 14, see Application Diagram).

**APPLICATION DIAGRAM FOR OUTPUT AND MODULATION SELECTION**

### ELECTRICAL SPECIFICATIONS

#### 1. Absolute Maximum Ratings

PARAMETERS	SYMBOL	MIN.	MAX.	UNITS
Supply Voltage	$V_{DD}$		4.6	V
Input Voltage, dc	$V_I$	-0.5	$V_{DD}+0.5$	V
Output Voltage, dc	$V_O$	-0.5	$V_{DD}+0.5$	V
Storage Temperature	$T_S$	-65	150	°C
Ambient Operating Temperature*	$T_A$	-40	85	°C
Junction Temperature	$T_J$		125	°C
Lead Temperature (soldering, 10s)			260	°C
ESD Protection, Human Body Model			2	kV

Exposure of the device under conditions beyond the limits specified by Maximum Ratings for extended periods may cause permanent damage to the device and affect product reliability. These conditions represent a stress rating only, and functional operations of the device at these or any other conditions above the operational limits noted in this specification is not implied.

\* **Note:** Operating Temperature is guaranteed by design for all parts (COMMERCIAL and INDUSTRIAL), but tested for COMMERCIAL grade only.

#### 2. DC/AC Specifications

PARAMETERS	SYMBOL	CONDITIONS	MIN.	TYP.	MAX.	UNITS
Supply Voltage	$V_{DD}$		2.97		3.63	V
Input High Voltage	$V_{IH}$		$0.7 \cdot V_{DD}$			V
Input Low Voltage	$V_{IL}$				$0.3 \cdot V_{DD}$	V
Input High Current	$I_{IH}$				100	$\mu A$
Input Low Current	$I_{IL}$				100	$\mu A$
Output High Voltage	$V_{OH}$	$I_{OH}=5mA, V_{DD}=3.3V$	2.4			
Output Low Voltage	$V_{OL}$	$I_{OL}=6mA, V_{DD}=3.3V$			0.4	
Input Frequency	$F_{XIN}$	When using a crystal	15		30	MHz
	$F_{IN}$	When using reference clock	15		30	MHz
Maximum interruption of $F_{IN}$		When using reference clock			100	$\mu s$
Load Capacitance	$C_L$	Between Pin XIN and XOUT*		18		pF
Pull-up Resistor	$R_{up}$	PIN 2		120		$k\Omega$
Pull-up Resistor	$R_{up}$	PIN 3,4,5,6,7,8,11,12		30		$k\Omega$
Short Circuit Current	$I_{sc}$			25		mA
3.3V Dynamic Supply Current	$I_{CC}$	No Load		20		mA

\***Note:** Pin XIN and XOUT each has a 36pF capacitance. When used with a XTAL, the two capacitors combined load the crystal with 18pF. If driving XIN with a reference clock signal, the load capacitance will be 36pF (typical).
