

XC6365 / 6366 Series

PWM Controlled, PWM/PFM Switchable Step-down DC/DC Converters

- ◆ **Input Voltage Range** : 2.2~10.0V
- ◆ **Output Voltage Range** : 1.5~6.0V(±2.5%)
- ◆ **Oscillator Frequency** : 300kHz(±15%)
- ◆ **Maximum Duty Ratio** : 100%
- ◆ **High Efficiency** : 92%
- ◆ **PWM/PFM Switching Control (XC6366)**
- ◆ **SOT-25 Package**

General Description

The XC6365/66 series are multi-functional step-down DC/DC converters with built-in high speed, low ON resistance drivers. An output current of more than 1A is possible using an externally connected transistor, coil, diode and capacitor.

Output voltage is programmable in 0.1V steps between 1.5V to 6.0V (V_{OUT}) (±2.5% accuracy). Further, with 1.0V of standard voltage supply internal and using externally connected components, output voltage can be set up freely (FB).

With a 300kHz switching frequency, the size of the external components can be reduced.

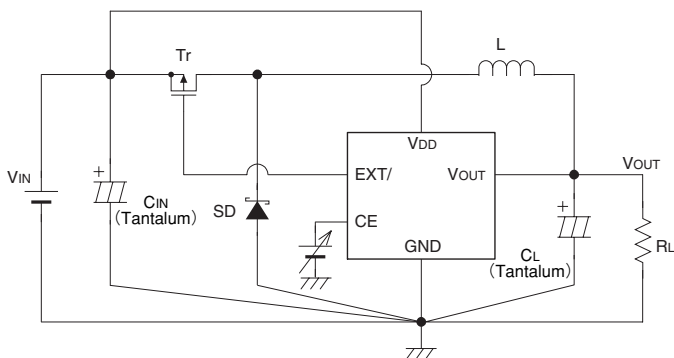

Control switches from PWM to PFM during light loads with the XC6366 (PWM/PFM switchable) and the series is highly efficient from light loads to large output currents.

In relation to soft-start time, both internally set-up 10msec types (A,B) and external resistor or capacitor regulated types (C,D) are available.

During stand-by time (CE pin "Low"), current consumption is reduced to less than 0.5µA.

With U.V.L.O internal, the external Tr. will be forcibly switched off if used below the stipulated voltage.

Typical Application Circuit

Applications

- Electronic Information Organizers
- Palmtops
- Cellular and portable phones
- Portable Audio Systems
- Various Multi-function Power Supplies

Features

- Input voltage range** : 2.2V~10V (V_{OUT} type)
- Output voltage range** : 1.5V~6.0V programmable in 0.1V steps (±2.5%)
- Oscillator frequency** : 300kHz (±15%)
: Custom products for 180, 500kHz
- Output Current** : 1.0A + ($V_{IN}=5.0V, V_{OUT}=3.0V$)
- High Efficiency** : 92% (typ.)
- Stand-by capability** : $I_{STB}=0.5\mu A$ (max.)
- Soft-start time set-up externally type possible**
- Internally set-up output voltage type possible (V_{OUT})**
- Externally set-up output voltage type possible (FB)**
- Package** : SOT-25

Efficiency	EFFI	Use of a XP162A01B5 transistor recommended		92		%
Soft-Start Time	T_{SS}		5	10	20	msec

Measuring conditions: Unless otherwise specified, connect external components. $V_{IN}=V_{DD}=4.5V$, $I_{OUT}=200mA$

External components: $R_{FB1} = 400k\Omega$, $R_{FB2} = 200k\Omega$, $C_{FB} = 100pF$

Series Amendments:

XC6365D, XC6366D series

External Components : $C_{SS}=0.033\mu F$, $R_{SS}=330k\Omega$

The following parameter applies :

Soft Start Time (T_{SS}) : Connect R_{SS} , C_{SS} . $CE, 0V \rightarrow 3.0V$

Typical Application Circuits

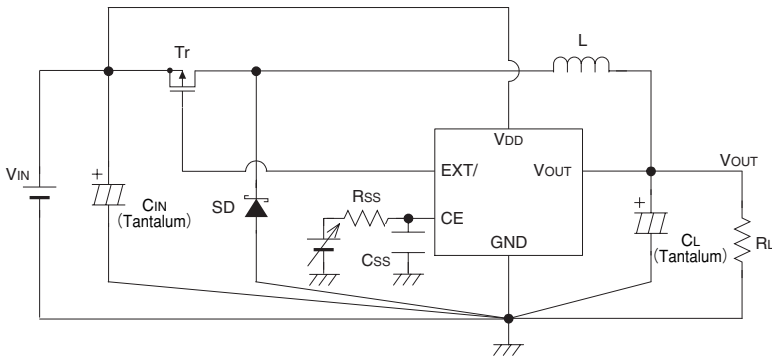

Circuit 1. XC6365A, XC6366A

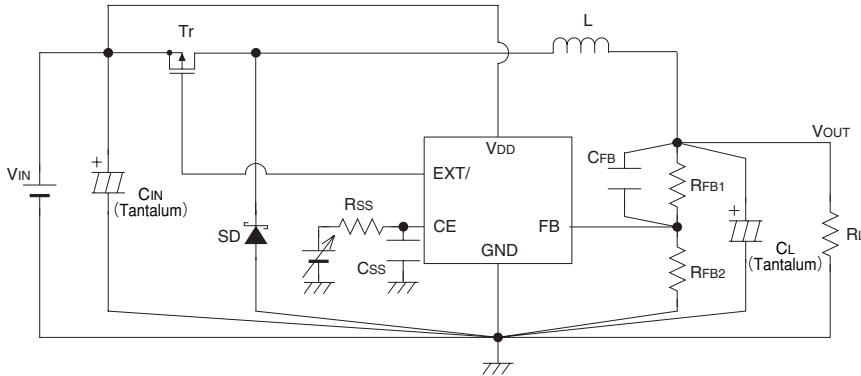

Circuit 2. XC6365B, XC6366B

Circuit 3. XC6365C, XC6366C

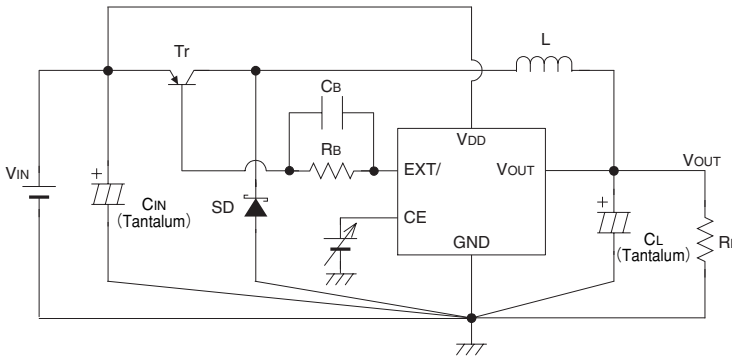

Circuit 4. XC6365D, XC6366D

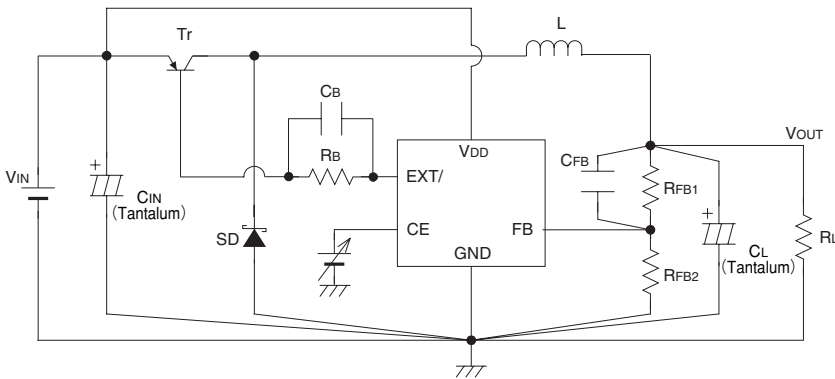

Circuit 5. XC6365A, XC6366A (when used with a PNP transistor)

5

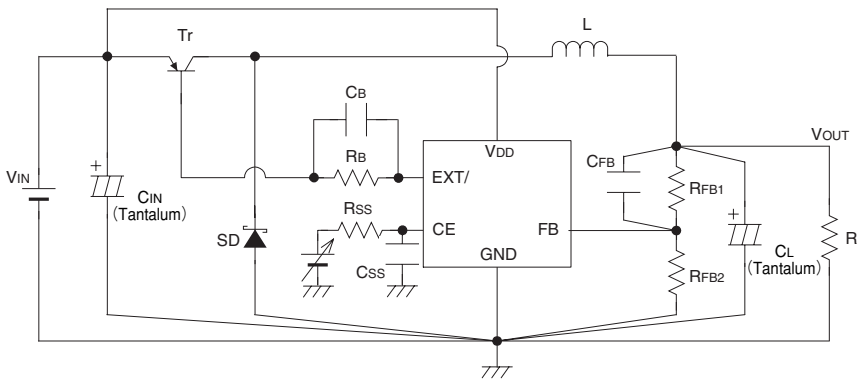

Circuit 6. XC6365B, XC6366B (when used with a PNP transistor)

Circuit 7. XC6365C, XC6366C (when used with a PNP transistor)

Circuit 8. XC6365D, XC6366D (when used with a PNP transistor)

Recommended Components

- Tr : XP162A12A6PR (Torex P-channel Power MOSFET)
Please use a PNP transistor where $V_{IN} < 2.5V$
- L : 22 μ H (Sumida CR54, $F_{osc}=300kHz$)
47 μ H (Sumida CR75, $F_{osc}=180kHz$)
10 μ H (Sumida CR54, $F_{osc}=500kHz$)
- SD : MA2Q735 (Schottky Diode, Matsushita)
- CL : 10V 47 μ F (Tantalum capacitor, Nichicon MCE)
- CIN : 16V 10 μ F (Tantalum capacitor, Nichicon MCE)

PNP Tr type :

- Tr : 2SA1213 (Toshiba)
- RB : 500 Ω
(Adjust according to load and Tr. h_{FE} levels)
- CB : 2200pF (Ceramic type)
Set up so that $CB \leq 1 \div (2\pi \times RB \times F_{osc} \times 0.7)$

C, D type (soft-start externally set-up):

- CSS : 0.033 μ F (Ceramic capacitor)
- Rss : 470k Ω (C type), 330k Ω (D type)

B, D type (FB versions)

- RFB : Set up so that $R_{FB1} \div R_{FB2} = V_{OUT} - 1$ (V_{OUT} = set output voltage),
 $R_{FB1} = R_{FB2} \leq 2M\Omega$
- CFB : Set up so that $f_{zfb} = 1 \div (2\pi \times C_{FB} \times R_{FB1})$ is within the 0.5 to 20kHz range (10kHz conventional)
Adjustments necessary in respect of L, CL.
- e. g : $V_{OUT} = 3.0V$
 $R_{FB1} = 400k\Omega$, $R_{FB2} = 200k\Omega$, $C_{FB} = 100pF$

Directions for use

Notes on Use

Take ample care to ensure that none of the IC's, nor the external component's, absolute maximum ratings are exceeded.

Be extremely careful when selecting parts and do not limit your reference to the specifications and characteristics for the DC/DC converter alone. The IC also depends, to a great extent, upon the external components.

Arrange the peripherals in the environs of the IC. In order to reduce wiring impedance, use short, thick wires. In particular, wire the load capacitor as close as possible and strengthen the ground wiring sufficiently.

Ground current during switching may cause the IC's operations to become unstable due to changes in ground voltage, so please strengthen the IC's GND pin surroundings.

External Components

1. Setting soft start time

To set a longer soft start time, please use XC6365C or XC6365D series which soft start function is externally set up.

For the measurement of soft start time T_{SS} , the time is needed to be between the max. and the min. value indicated in the chart below.

Please set a soft start capacitor C_{SS} according to the application.

5

2. Setting RFB1 and CFB

$$f_{zfb} = 1 \div (2 \pi \times C_{FB} \times R_{FB1})$$

As the combination of R_{FB1} and C_{FB} enable to set f_{zfb} between 0.5kHz to 20kHz, within the realm of $f_{zfb}=0.5kHz$ to $f_{zfb}=20kHz$ as the chart below can be effective.

Under normal condition, please set the combination to configure around $f_{zfb}=10kHz$.

Typical Performance Characteristics

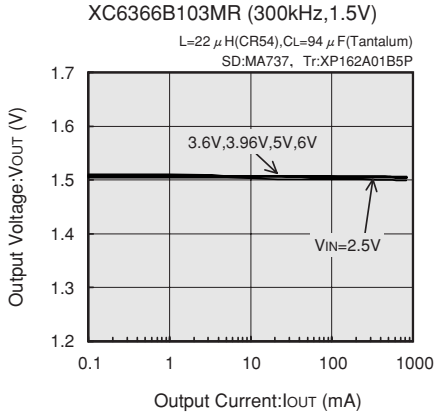

(1) OUTPUT VOLTAGE vs. OUTPUT CURRENT
