

W91430 SERIES

## 13-MEMORY TONE/PULSE SWITCHABLE DIALER WITH SAVE FUNCTION

### GENERAL DESCRIPTION

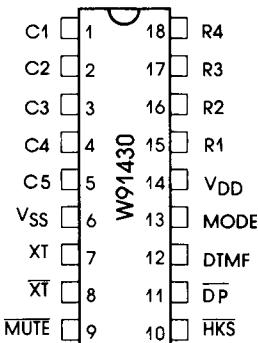

The W91430 series are monolithic integrated circuit. It contains 13 memories which can perform Tone/Pulse switchable dialing functions. It is fabricated in CMOS technology thus has good performance in low voltage, low power operations.

Three 16-digits direct dialing memories and two 32-digits Redial & Save memories are design for convenient operations.

### FEATURES

- DTMF/PULSE switchable dialer.
- 2 by 32 digits for Redial and Save memory.
- 3 by 16 digits for one touch direct repertory memory.
- 10 by 16 digits for two touch indirect repertory memory.
- Tone key (\*) key for Long Distance Call operation.
- Redial memory cascadable with normal dialing and dialing length is unlimit, but if dialing length overstep 32 digits the Redial is inhibited.
- Fully key-ined & key-released debounced 4 × 5 keyboard.
- Easy operation with Redial, Flash, Pause and P-T (\*) keypads.
- Flash, Pause, P-T (\*) can be stored as a digit in memory.
- Minimum tone output duration: 100mS.; Minimum inter tone pause: 100mS.
- Dial rate 10 or 20 pps is selectable by pin option.

### PIN CONFIGURATION

TONE/PULSE  
DIALER

- Typical inter digit pause (IDP): 800mS. (10 pps); 500 mS. (20 pps) in Pulse mode.
- Power on reset on chip.
- Long mute for Redial & Repertory dialing.
- Uses 3.579545 MHz TV quartz crystal or

ceramic resonator.

- DIP plastic 18 PIN package
- Pulse number, Pause time, Flash time are selected by type number. (See TABLE 1)

TABLE 1

TYPE NO.	DIALING SEQ.	PAUSE	B:M	FLASH	FLASH PAUSE
W91432	10/20 pps (Normal)	2.0 SEC	3:2	600 mS	600 mS
W91433			2:1		
W91434	10/20 pps (Normal)	3.6 SEC	3:2	73 mS	140 mS
W91435			2:1		
W91436	10/20 pps (Normal)	3.6 SEC	3:2	600 mS	600 mS
W91437			2:1		
W91438	10 pps (N+1)	3.6 SEC	3:2	73 mS	140 mS
W91439	10 pps (10-N)	3.6 SEC	2:1	73 mS	140 mS

NORMAL	N + 1	10 - N
0-10 pulses	0-1 pulses	0-10 pulses
1-1 pulses	1-2 pulses	1-9 pulses
2-2 pulses	2-3 pulses	2-8 pulses
3-3 pulses	3-4 pulses	3-7 pulses

**PIN /FUNCTION DESCRIPTION****A. ROW-COLUMN INPUTS (pins 1-5 & 15-18)**

The keyboards input is compatible with the standard 2-of-9 keyboard, the inexpensive single contact (Form A) keyboard, and electronic input.

In normal operation, any single button is pushed to produce dual tone, pulses or functions. Activation of two or more buttons will result in no response, except for single tone.

**B. XT,  $\overline{XT}$  (Pin 7 & 8)**

An built in inverter provides oscillation with an inexpensive 3.579545 MHz TV color burst crystal. The oscillator ceases when a keypad input is not sensed. Most crystals do not very more than  $\pm 0.02\%$ .

**C. MUTE (pin 9)**

The MUTE is a conventional CMOS N-Channel open drain output. The output transistor is switched on during dialing sequence (both Pulse and Tone mode). Otherwise, it is switched off.

**D. HKS (pin 10)**

The HKS (HOOK SWITCH) input is used to sense the state of handset in ON HOOK or OFF HOOK. In ON HOOK state, HKS=1, or open the keyboard input is disabled, there is not any operation for any keyboard entry, to avoid the energy lose stored in capacitor. In OFF HOOK state, HKS=0, all of the function work.

HKS pin is pulled to  $V_{DD}$  by internal resistor.

**E.  $\overline{DP}$  (pin 11)**

This pin is an N-channel open drain output. The output is low (switched on) in the dial pulse "Break" operation during Off Hook Pulse. Otherwise, this output is "open" (switched off).

In Pulse mode, the output sends a chain of pulses to correspond the address keypad input, but keep open level for \* and # entry and can not be stored in memory for # entry.

In Pulse mode, the \* key is a tone key, if \* key is key-ined then it will be changed to Tone mode from Pulse mode.

Table-2 is the operation function table for \* key.

Fig. – 1(a,b) shows the timing diagram in pulse mode. The pulses rate and inter digit pause are fixed, to be 10 pps (800 mS) and 20 pps (500 mS) respectively.

**F.DTMF (pin 12)**

This pin is used to output DTMF address signals. During pulse dialing, it always keep at low state regardless of keypad input. In tone mode, it will output dual or single tone. The detail timing diagram of tone mode is shown in Fig. – 2(a,b).

Specified	Actual	% Error
R1	697	+0.28
R2	770	-0.52
R3	852	-0.47
R4	941	+0.74
C1	1209	+0.57
C2	1336	-0.30
C3	1477	-0.34

**G.MODE (pin 13)**

Pulls pin 13 to  $V_{DD}$  or floating, the dialer is in pulse mode, the pulse rate is 10 pps or 20 pps respectively.

Pulls pin 13 to  $V_{SS}$ , it is in DTMF mode.

**H. $V_{DD}$ ,  $V_{SS}$  (pin 14, 6)**

These are the power input pins for the Tone/Pulse dialer.

## KEYBOARD FUNCTION

C1	C2	C3	C4	C5	
1	2	3	STR	M1	R1
4	5	6	F	M2	R2
7	8	9	AUTO	M3	R3
(P→T)	0	#	R/P	SAVE	R4

## KEYBOARD OPERATION

Note:

- All the keyboard operations should be under OFF HOOK condition.
- D1-Dn: 0-9, \*, #.
- Mn: M1-M3
- Ln: Memory location 0-9
- The number D1, D2, ---, Dn will be dialed out in Pulse or Tone mode as mode selected.

### A. NORMAL DIALING

**OFF HOOK** **D1** **D2** ..., **Dn**

D1, D2 ---, Dn will be dialed out.

Dialing length is unlimit, but if dialing length overstep 32 digits the Redial is inhibited.

### B. REDIALING

**OFF HOOK** **R/P**

The **R/P** key can execute Redial function only in first key in after OFF HOOK, otherwise will be Pause function.

### C. NUMBER STORE

1. **OFF HOOK** **D1** **D2** ... **Dn** **S** **S** **Mn** or  
**Ln** **ON HOOK**

D1, D2, ---, Dn will be stored in Mn memory location and they will be dialed out.

2. **OFF HOOK** **S** **D1** **D2** ..., **Dn** **S** **Mn** or  
**Ln** **ON HOOK**

D1, D2, ---, Dn will be stored in Mn memory location but they will not be dialed out.

**F** **R/P** and **P-T** keys can be stored as a digit in memory, but **R/P** key can not be occupied in first digit. The store mode can be released after the store function is executed or the present state of hook switch is changed.

TABLE 2.

Function Mode	Normal Dialing	Redialing	Repertory Dialing	Save Dialing
Tone Mode	*	*	Pause	Pause
Pulse Mode	P-T Pause	P-T Pause	P-T Pause	P-T Pause

### D. MEMORY DIALING

- OFF HOOK** **Mn**
- OFF HOOK** **AUTO** **Ln**

**E.ACCESS PAUSE****OFF HOOK [D1], [D2], R/P, [D3] ,--, [Dn]****BUSY [ON HOOK]****Come [OFF HOOK] R/P**

The Pause function is executed in Normal dialing or Memory dialing. Auto Pause 2.0 or 3.6 sec per Pause, that selects by type number. Pause function timing diagram is shown in Fig.-3.

**F.PULSE TO TONE (\* key)**
**OFF HOOK [D1], [D2],---,[Dn], P→T, [D1][Dj],  
P→T, [D1'], [D2'],---, [Dn']**

If the mode switch is set in Pulse mode, then the output signal will be:

D1, D2, - - -, Dn, (Pulse) Pause (2.0s/3.6s), Dj, Dj, DTMF(\*), D1', D2', - - -, Dn' (Tone)

If the mode switch is set in Tone mode, then the output signal will be:

D1, D2, ---, Dn, (Tone) DTMF (\*), Di, Dj, DTMF (\*), D1', D2', - - -, Dn' (Tone)

It can be reset to Pulse mode only in operation of ON HOOK, because it's still in Tone mode when the digits have been dialed out. P-T function timing diagram is shown in Fig-4.

**G.FLASH****OFF HOOK F**

It will execute ON HOOK 600 msec (or 73 msec), and pause for 600 msec (or 140 mS ) before the next digit is dialed out. Flash key can be stored as a digit in memory. The Flash function timing diagram is shown in Fig.-5.

**H.SAVE KEY**
**1. OFF HOOK [D1] [D2]---,[Dn] SAVE**
**[ON HOOK] Come [OFF HOOK] SAVE**

D1, D2, ---, Dn will be dialed out after SAVE key is keyedin.

**2. OFF HOOK [D1] [D2]---,[Dn] or Mn**
**CONVERSATION**
**[S] [D1'] [D2'] ---, [Dn'] SAVE**

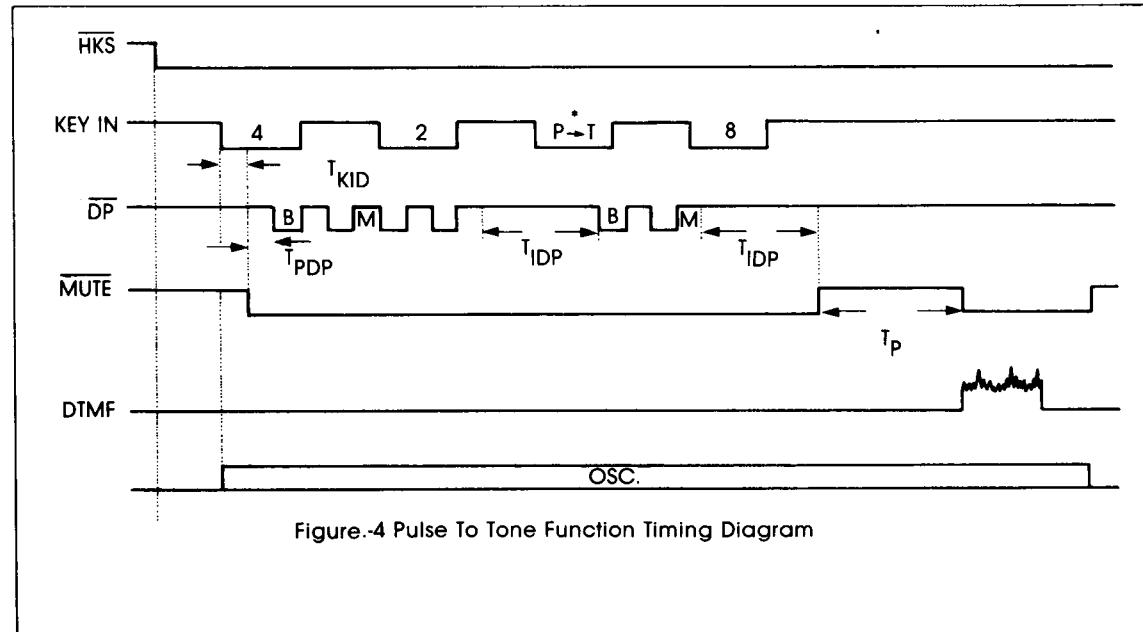

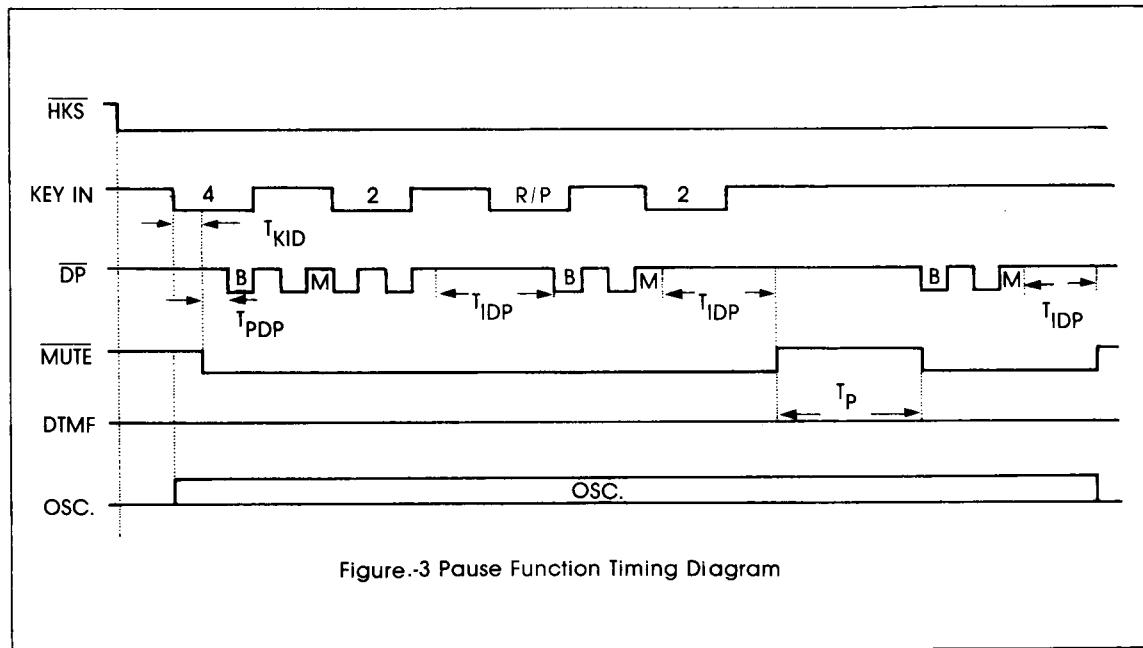

D1', D2', Dn' will be stored in SAVE memory, but they will not be dialed out.

**3. OFF HOOK S SAVE**

It will copy redial buffer content to SAVE memory.

**I.MIX DIALING**
**1. Normal dialing + Memory dialing + Normal dialing**
**2. Memory dialing + Normal dialing + Memory dialing**
**3. Redialing + Normal dialing + Memory dialing**

Redialing and Save dialing valid just for first key-in.
