Precision Thick Film Chip Resistors

ERJ R: 0402, 0603, 0805 ERJ E: 0603, 0805, 1206, 1210, 1812

Type: ERJ 2R, 3R, 6R ERJ 3E, 6E, 8E, 14, 12

■ Features

- Small size and lightweight
- High reliability
 Metal glaze thick film resistive element and three
 layered electrodes.
- Compatible with placement machines
 Bulk, taping and magazine packaging available
- Suitable for both reflow soldering and flow soldering
- Marking
 Four digit marking of resi

Four digit marking of resistance value on resistive element side (except 2R, 3R, 6R, 3E Type)

- The power rating for one-K size larger is available for 3E, 6E, 8E type
- Approved under the ISO 9001 system Approved under the QS-9000 system
- Reference Standards
 IEC 60115-8, JIS C 5201-8

⁽¹⁾ Rated Continuous Working Voltage (RCWV) should be determined from RCWV=√Power Rating × Resistance Values, or Limiting Element Voltage (max. RCWV) listed above, whichever is less.

Power Derating Curve

For resistors operating in ambient temperature above 70 °C, power rating should be derated in accordance with the figure to the right.

⁽²⁾ Overload (Short-time Overload) Test Voltage (SOTV) should be determined from SOTV=2.5 × Power Rating or max. Overload Voltage listed above whichever is less.

^{*} Please contact us when resistors guaranteed for high power are needed.

■ Recommended Land Pattern

In case of flow soldering, the land width must be smaller than the Chip Resistor width to control the solder amount properly. Generally, the land width should be 0.7 to 0.8 times (W) of the width of chip resistor. In case of reflow soldering, solder amount can be adjusted, therefore the land width should be set to 1.0 to 1.3 times chip resistor width (W).

■ Recommended Soldering Conditions

Recommendations and precautions are described below.

- Recommended soldering conditions for reflow
- ·Reflow soldering shall be two times maximum.
- Please contact us for additional information when used in conditions other than those specified.
- ·Please measure temperature of terminations and study solderability for every kind of solder and board, before actual use.

For soldering (Example: Sn/Pb)

	Temperature	Time
Preheating	140 °C to 160 °C	60 s to 120 s
Main heating	Above 200 °C	30 s to 40 s
Peak	235 ± 5 °C	max. 10 s

For lead-free soldering (Example : Sn/Ag/Cu)

- 1. If transient load (heavy load in a short time) like pulse is to be applied, carry out an evaluation and confirmation test with the resistors actually mounted on the board.
 - When a load of more than the rated power is applied under load condition at steady state, it could impair performance and/or reliability of the resistor.
 - Never exceed the specified rated power.
- 2. Chlorine type or other highly-reactive flux is not recommended. Residue could affect performance or reliability of the resistors.
- 3. When using a soldering iron, never let the tip of the soldering iron touch the body of the chip resistor. When using a soldering iron with a tip at a high temperature, solder for as short time as possible (no more than three seconds and up to 350 °C).
- 4. Avoid physical shock to the resistor and nipping of the resistor with hard tool (pliers or tweezers) as it may damage protective coating or the body of the resistor and may affect its performance.
