## HFBR-0500ZSeries

Versatile Link

## Data Sheet

## Description

The Versatile Link series is a complete family of fiber optic link components for applications requiring a low cost solution. The HFBR-0500Z series includes transmitters, receivers, connectors and cable specified for easy design. This series of components is ideal for solving problems with voltage isolation/insulation, EMI/ RFI immunity or data security. The optical link design is simplified by the logic compatible receivers and complete specifications for each component. The key optical and electrical parameters of links configured with the HFBR-0500Z family are fully guaranteed from $0^{\circ}$ to $70^{\circ} \mathrm{C}$.

A wide variety of package configurations and connectors provide the designer with numerous mechanical solutions to meet application requirements. The transmitter and receiver compo-
nents have been designed for use in high volume/low cost assembly processes such as auto insertion and wave soldering.

Transmitters incorporate a 660 nm LED. Receivers include a monolithic dc coupled, digital IC receiver with open collector Schottky output transistor. An internal pullup resistor is available for use in the HFBR-25X1Z/ $2 \mathrm{Z} / 4 \mathrm{Z}$ receivers. A shield has been integrated into the receiver IC to provide additional, localized noise immunity.

Internal optics have been optimized for use with 1 mm diameter plastic optical fiber. Versatile Link specifications incorporate all connector interface losses. Therefore, optical calculations for common link applications are simplified.

## Features

- RoHS-compliant
- Low cost fiber optic components
- Enhanced digital links: dc-5 M Bd
- Extended distance links up to 120 m at 40 kBd
- Low current link: 6 mA peak supply current
- Horizontal and vertical mounting
- Interlocking feature
- High noise immunity
- Easy connectoring: simplex, duplex, and latching connectors
- Flame retardant
- Transmitters incorporate a 660 nm red LED for easy visibility
- Compatible with standard TTL circuitry

## Applications

- Reduction of lightning/ voltage transient susceptibility
- Motor controller triggering
- Data communications and local area netw orks
- Electromagnetic Compatibility (EM C) for regulated systems: FCC, VDE, CSA, etc.
- Tempest-secure data processing equipment
- Isolation in test and measurement instruments
- Error free signalling for industrial and manufacturing equipment
- Automotive communications and control netw orks
- Noise immune communication in audio and video equipment

## HFBR-0500Z Series Part Number Guide

## Link Selection Guide

(Links specified from 0 to $70^{\circ} \mathrm{C}$, for plastic optical fiber unless specified.)

| Signal Rate | Distance $\mathbf{( m )} \mathbf{2 5 ^ { \circ }} \mathbf{C}$ | Distance (m) | Transmitter | Receiver |
| :---: | :---: | :---: | :---: | :---: |
| 40 kBd | 120 | 110 | HFBR-1523Z | HFBR-2523Z |
| 1 MBd | 20 | 10 | HFBR-1524Z | HFBR-2524Z |
| 1 MBd | 55 | 45 | HFBR-1522Z | HFBR-2522Z |
| 5 Mbd | 30 | 20 | HFBR-1521Z | HFBR-2521Z |

## Evaluation Kit

HFBR-0500Z 1 MBd Versatile Link:
This kit contains: HFBR-1524Z Tx, HFBR-2524Z Rx, polishing kit, 3 styles of plastic connectors, Bulkhead feedthrough, 5 meters of 1 mm diameter plastic cable, lapping film and grit paper, and HFBR-0500Z data sheet.

## Application Literature

Application Note 1035 (Versatile Link)

## Package and Handling Information

The compact Versatile Link package is made of a flame retardant VALOX ${ }^{\ominus}$ UL 94 V-0 material (UL file \# E121562) and uses the same pad layout as a standard, eight pin dual-in-line package. Vertical and horizontal mountable parts are available. These low profile Versatile Link packages are stackable and are enclosed to provide a dust resistant seal. Snap
action simplex, simplex latching, duplex, and duplex latching connectors are offered with simplex or duplex cables.

## Package Orientation

Performance and pinouts for the vertical and horizontal packages are identical. To provide additional attachment support for the vertical Versatile Link housing,
the designer has the option of using a self-tapping screw through a printed circuit board into a mounting hole at the bottom of the package. For most applications this is not necessary.

## Package Housing Color

Versatile Link components and simplex connectors are color coded to eliminate confusion
when making connections.
Receivers are blue and transmitters are gray, except for the HFBR-15X3Z transmitter, which is black.

## Handling

Versatile Link components are auto-insertable. When wave soldering is performed with Versatile Link components, the optical port plug should be left in to prevent contamination of the port. Do not use reflow solder processes (i.e., infrared reflow or vapor-phase reflow). Nonhalogenated water soluble fluxes (i.e., $0 \%$ chloride), not rosin based fluxes, are recommended for use with Versatile Link components.

Versatile Link components are moisture sensitive devices and are shipped in a moisture sealed bag. If the components are exposed to air for an extended period of time, they may require a baking step before the soldering process. Refer to the special labeling on the shipping tube for details.

## Recommended Chemicals for Cleaning/ Degreasing

Alcohols: methyl, isopropyl, isobutyl. Aliphatics: hexane, heptane. Other: soap solution, naphtha.

Do not use partially halogenated hydrocarbons such as $1,1.1$ trichloroethane, ketones such as MEK, acetone, chloroform, ethyl acetate, methylene dichloride, phenol, methylene chloride, or N-methylpyrolldone. Also, Avago does not recommend the use of cleaners that use halogenated hydrocarbons because of their potential environmental harm.

## Mechanical Dimensions

 Horizontal M odules

Vertical Modules

Versatile Link Printed Board Layout Dimensions
Horizontal M odule

DIMENSIONS IN MILLIMETERS (INCHES).

## Vertical M odule

## Interlocked (Stacked) Assemblies (refer to Figure 1)

Horizontal packages may be stacked by placing units with pins facing upward. Initially engage the interlocking mechanism by sliding the L bracket body from above into the L slot body of the lower package. Use a straight edge, such as a ruler, to bring all
stacked units into uniform alignment. This technique prevents potential harm that could occur to fingers and hands of assemblers from the package pins. Stacked horizontal packages can be disengaged if necessary. Repeated stacking and unstacking causes no damage to individual units.

## Stacking Horizontal M odules

## Stacking Vertical M odules

3. $1 \mu$ s pulse, $20 \mu \mathrm{~s}$ period.

All HFBR-15XXZ LED transmitters are classified as IEC 825-1 Accessible Emission Limit (AEL) Class 1 based upon the current proposed draft scheduled to go into effect on J anuary 1, 1997. AEL Class 1 LED devices are considered eye safe. Contact your local Avago sales representative for more information.

Transmitter Electrical/ Optical Characteristics $0^{\circ} \mathrm{C}$ to $70^{\circ} \mathrm{C}$ unless otherw ise specified.
$\left.\begin{array}{l|c|c|c|c|c|c|c}\hline \text { Parameter } & \text { Symbol } & \text { Min. } & \text { Typ. }{ }^{[5]} & \text { Max. } & \text { Units } & \text { Conditions } & \text { Ref. } \\ \hline \begin{array}{l}\text { Transmitter Output } \\ \text { Optical Power }\end{array} & \mathrm{P}_{\mathrm{T}} & -16.5 & & -7.6 & \mathrm{dBm} & \mathrm{I}_{\mathrm{Fdc}}=60 \mathrm{~mA} & \text { Notes 1,2 } \\ \hline \begin{array}{l}\text { Output Optical Power } \\ \text { Temperature Coefficient }\end{array} & \Delta \mathrm{P}_{\mathrm{T}} / \Delta \mathrm{T} & & -14.3 & & -8.0 & \mathrm{dBm} & \mathrm{I}_{\mathrm{Fdc}}=60 \mathrm{~mA}, 25^{\circ} \mathrm{C}\end{array}\right]$

## Notes:

1. Measured at the end of 0.5 m standard fiber optic cable with large area detector.
2. Optical power, $\mathrm{P}(\mathrm{dBm})=10 \log [\mathrm{P}(\mu \mathrm{W}) / 1000 \mu \mathrm{~W}]$.
3. Rise and fall times are measured with a voltage pulse driving the transmitter and a series connected $50 \Omega$ load. A wide bandwidth optical to electrical waveform analyzer, terminated to a $50 \Omega$ input of a wide bandwidth oscilloscope, is used for this response time measurement.

## Notes:

1. For $\mathrm{I}_{\text {FPK }}>80 \mathrm{~mA}$, the duty factor must be such as to keep $\mathrm{I}_{\text {Fdc }} \leq 80 \mathrm{~mA}$. In addition, for $\mathrm{I}_{\text {FPK }}>80 \mathrm{~mA}$, the following rules for pulse width apply:

IFpK $\leq 160 \mathrm{~mA}$ : Pulse width $\leq 1 \mathrm{~ms}$ $I_{\text {FPK }}>160 \mathrm{~mA}$ : Pulse width $\leq 1 \mu \mathrm{~S}$, period $\geq 20 \mu \mathrm{~S}$.
2. The propagation delay for one meter of cable is typically 5 ns .
3. Estimated typical link life expectancy at $40^{\circ} \mathrm{C}$ exceeds 10 years at 60 mA .
4. Pulsed LED operation at IFPK $>80 \mathrm{~mA}$ will cause increased link tpLH propagation delay time. This extended tpLH time contributes to increased pulse width distortion of the receiver output signal.

## Notes:

1. M easured at the end of the fiber optic cable with large area detector.
2. Pulsed LED operation at $I_{F}>80 \mathrm{~mA}$ will cause increased link tpLH propagation delay time. This extended tpLh time contributes to increased pulse width distortion of the receiver output signal.
3. The LED drive circuit of Figure 11 is required for 1 M Bd operation of the HFBR-25X2Z/ 25 X 4 Z .
4. Optical flux, $\mathrm{P}(\mathrm{dBm})=10 \log [\mathrm{P}(\mu \mathrm{W}) / 1000 \mu \mathrm{~W}]$.
5. $R_{L}$ is open.

## Notes:

1. M easured at the end of the fiber optic cable with large area detector.
2. Optical flux, $P(d B m)=10 \log P(\mu W) / 1000 \mu W$
3. Because of the very high sensitivity of the HFBR-25X3Z, the digital output may switch in response to ambient light levels when a cable is not occupying the receiver optical port. The designer should take care to filter out signals from this source if they pose a hazard to the system.
4. Including current in 3.3 k pull-up resistor.
