

PROTECTION PRODUCTS - RailClamp®
Description

RailClamp® TVS diode arrays are specifically designed to protect sensitive components which are connected to high-speed data and transmission lines from over-voltage caused by **ESD** (electrostatic discharge), **CDE** (Cable Discharge Events), and **EFT** (electrical fast transients). The RClamp®7002M has been optimized for use on the next generation of ADSL interfaces. Their high surge capability makes them particularly useful in systems that utilize gas tubes as the primary protection component.

This device integrates surge rated, low capacitance steering diodes in a small MSOP-10L package. Each protection diode features a large area junction to minimize clamping voltage and increase reliability during high current surges. It has a maximum capacitance of only 10pF and may be used to protect two high-speed lines without sacrificing signal integrity. The RClamp7002M may be used on systems operating from 3.3 to 70 volts. This means that they may be used in applications that use the Central Office battery as the main supply.

The RClamp7002M is also designed for easy board layout by allowing the signal traces to run straight through the device. The high surge capability, ease of layout coupled with the low capacitance and clamping voltage of the RClamp7002M makes it the superior choice for protecting two high speed lines against high energy telecommunication surges.

Features

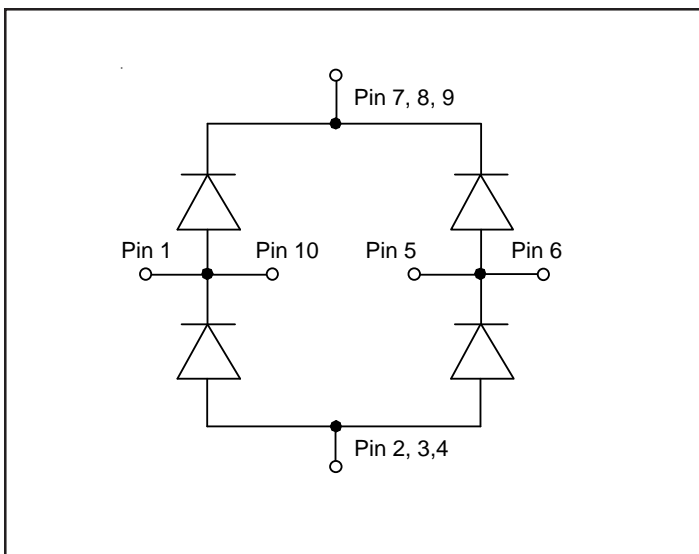

- ◆ 1000 Watts peak pulse power (**8/20µs**)
- ◆ Protection for high-speed data lines to
IEC 61000-4-2 (ESD) ±15kV (air), ±8kV (contact)
IEC 61000-4-4 (EFT) 40A (5/50ns)
IEC 61000-4-5 (Lightning) 1kV, 24A (1.2/50µs)
- ◆ Low clamping voltage: **10V at Ipp = 40A (8/20µs)**
- ◆ Array of surge rated suppression diodes
- ◆ Protects two high speed lines
- ◆ Low capacitance: **10pF** (I/O to Ground)
- ◆ Operating voltage range: 3.3 - 70V
- ◆ Small package saves board space
- ◆ Solid-state silicon-avalanche technology

Mechanical Characteristics

- ◆ JEDEC MSOP-10L package
- ◆ Molding compound flammability rating: UL 94V-0
- ◆ Marking: Marking code and date code
- ◆ Packaging: Tape and Reel
- ◆ Lead Finish: Matte tin
- ◆ Pb-Free, Halogen Free, RoHS/WEEE Compliant

Applications

- ◆ ADSL Lines
- ◆ Central Office Equipment
- ◆ T1/E1 secondary IC Side Protection
- ◆ Small Office Home Office (SOHO) Applications
- ◆ WAN/LAN Equipment
- ◆ ISDN S/T Interface
- ◆ ATM Interfaces

Applications Information

Device Connection Options for Protection of Two High-Speed Data Lines

This device is designed to protect two data lines from transient over-voltages by clamping them to a fixed reference. When the voltage on the protected line exceeds the reference voltage (plus diode V_f) the steering diodes are forward biased, conducting the transient current away from the sensitive circuitry. Data line inputs are connected at pins 1 and 5. The outputs are connected at pins 10 and 6 respectively. The negative reference is connected at pins 2, 3, and 4. These pins should be connected directly to a ground plane on the board for best results. The path length is kept as short as possible to minimize parasitic inductance. The positive reference is connected at pins 7, 8, and 9. The options for connecting the positive reference are as follows:

1. To protect data lines and the power line, connect pins 7, 8 and 9 directly to the positive supply rail (V_{CC}). In this configuration the data lines are referenced to the supply voltage. An external TVS diode may be added between the supply rail and ground in order to prevent over-voltage on the supply rail.
2. In applications where no positive supply reference is available, or complete supply isolation is desired, an external TVS diode may be used as the reference. The steering diodes will begin to conduct when the voltage on the protected line exceeds the working voltage of the TVS (plus one diode drop).
