Description

BLE112, Bluetooth low energy module is a single mode device targeted for low power sensors and accessories. BLE112 offers all Bluetooth low energy features: radio, stack, profiles and application space for customer applications, so external processor is not needed. The module also provides flexible hardware interfaces to connect sensors, simple user interfaces or even displays directly to the module.

In-module software development can be done with Bluegiga's BG Profile Toolkit™ offering environment for rapid Bluetooth profile development. Bluegiga's BG Script™ enables developers to automate in-module software functions making Bluetooth low energy application development extremely simple.

BLE112 can be powered directly with a standard 3V coin cell battery or pair of AAA batteries. In lowest power sleep mode it consumes only 400nA and will wake up in few hundred microseconds.
