- PIC24 Microcontrollers
- dsPIC® Digital Signal Controllers

16-bit Embedded Control Solutions

Are you enhancing your product performance and features to increase market share?

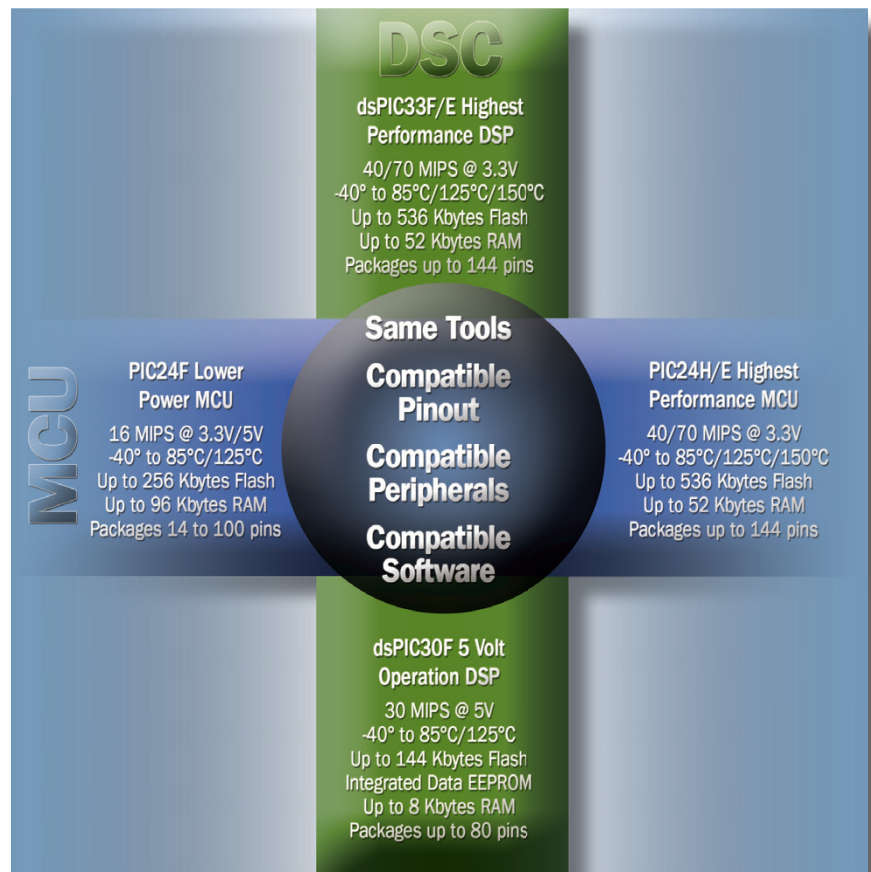

Do you want to achieve an edge over your competition with added connectivity and graphical user interface?

Do you want to generate more profits by optimizing your design and development costs?

Microchip's 16-bit embedded control solutions can help you!

Microchip's 16-bit solutions are designed to be a broad platform which can serve your needs now and in the future. If you have designed using our 8-bit PIC® microcontrollers you will be pleased to see that the same MPLAB® Integrated Development Environment used on our smallest 6-pin MCUs and our largest 32-bit PIC32 microcontrollers also supports our 16-bit controllers. Our commitment to peripheral and pinout compatibility has been carried forward to our 16-bit product families. If you are new to Microchip, we offer powerful, low cost development tools, a compatible lineup of products that range from low cost to high performance, and a Company dedicated to serving your needs.

Microchip offers two 16-bit Microcontroller (MCU) families plus two 16-bit Digital Signal Controller (DSC) families that offer compatible options across a wide spectrum of price, performance and feature sets.

Advanced Motor Control with dsPIC Portfolio

dsPIC Motor Control DSCs feature a high-performance CPU with motor control peripherals. The silicon solutions are backed up by free software application libraries and motor control algorithms. Low-cost motor control development boards support a wide variety of motors and help you to reduce your design risk and development efforts. Visit www.microchip.com/motor for more information.

Extreme Low Power Solutions

XLP Technology brings together the circuit and process technologies needed to address today's low power applications. With sleep currents down to 10 nA and industry-leading integration that includes USB OTG, PPS and mTouch™ capacitive sensing, XLP products can help you extend the life of your battery powered application. Visit www.microchip.com/xlp for more information.

Speech and Audio for All Embedded Applications

Microchip's 16-bit microcontrollers and digital signal controllers have the performance, peripherals and memory to implement speech and audio applications. A suite of advanced solution libraries have been developed and are available for your application requirements. Visit www.microchip.com/speech for more information.

Graphics Display Solutions

Graphics displays are gaining popularity in user interface applications and they are easy to add to your application when you use any of Microchip's 16- or 32-bit MCU or DSC devices with PMP. With Microchip's free graphics library and development tools, you can quickly integrate graphics display functions into your application in a single microcontroller. Visit www.microchip.com/graphics for more information.

16-bit Embedded Control Solutions

Digital Power for Improving the Efficiency and Optimizing the BOM Cost

Implementing advanced software digital control loops for power applications requires a high-performance DSP engine along with specialized peripherals. The dsPIC SMPS Family of DSCs feature a high-performance CPU and rich SMPS peripherals. SMPS peripherals include 4 MSPS 10-bit ADC, 1 nSec Resolution PWM and Analog comparator with 10 nSec response time. Complete reference designs and application solutions from Microchip will help you to get started. Visit www.microchip.com/power for more information.

Enhancing Connectivity to Your Embedded Control Applications

Whether you are considering wired or wireless connectivity, Microchip supports a wide variety of communications protocols with extensive design resources and software libraries. Microchip offers ZigBee® Pro, MiWi™, IrDA® Library stack for wireless connectivity and Ethernet, CAN and USB library stack for wired connectivity. Visit www.microchip.com/connectivity for more information.

High Temperature Rated Devices Qualified to AEC-Q100 Requirements

Several PIC24HJ and dsPIC33FJ devices are rated for operation up to 150°C ambient. These devices provide up to 20 MIPS processing power plus digital signal processing, LIN/ECAN™ connectivity, Motor Control and 10/12-bit ADC performance for stringent automotive and industrial applications. AEC-Q100 Grade 0 (150°C) devices have been released as well. Visit www.microchip.com/hightemp for the latest product offering.

Adding Intelligence To Sensors

dsPIC DSCs and PIC24 MCUs with high performance DSP and 12-bit ADC enable more complex data processing to occur closer to the sensor. These devices are available in small packages and can operate in extended and high-temperature ranges.

Powerful 16-bit CPU

- Single cycle execution
- Deterministic Interrupt response
- Single cycle bit manipulation
- Single-cycle multiply
- Zero overhead looping
- Fast DMA – No cycle stealing

Flexible Flash

- High endurance, flexible and secure Flash
- Advanced security features are available
- Program and data storage
- Self-program features

Integrated DSP

- Look and feel of MCU
- Single cycle 16x16 MAC
- 40-bit accumulators
- Dual operand fetches
- Saturation and rounding modes
- Many free libraries and low cost filter design tools

Innovative Peripherals

- Motor control peripherals
- SMPS peripherals
- Audio peripherals: DAC and I²S
- Graphics controller
- CTMU for mTouch™
- USB OTG
- CAN
- PMP for graphics

Power Saving Options

- eXtreme Low Power technology
- Deep sleep current as low as 10 nA
- Options to reduce speed or disable CPU
- Application software can alter clock speeds
- VBAT battery backup

Small Packages

- Packages as small as 5x5 mm
- 16-bit MCU with 128 KB Flash in a 6x6 mm package
- Peripheral Pin Select allows access to the peripherals needed

Leading 16-bit Performance and Features

16-bit Microcontroller (MCU) Portfolio

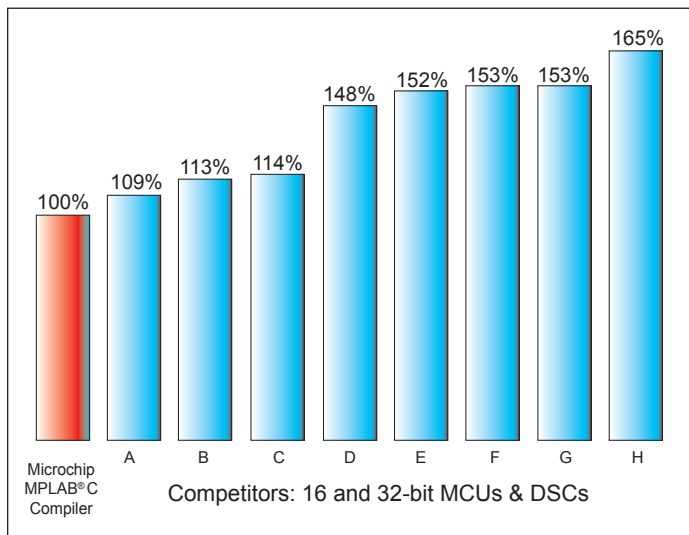

Are costs, performance, low power and smaller packages important considerations for your next design?

PIC24 MCUs offer a variety of peripherals, memory sizes and packaging choices. Microchip offers two compatible Flash-based 16-bit PIC24 MCU families. The 16 MIPS PIC24F family is designed for low power applications. The 40/70 MIPS PIC24H/E MCUs are designed for high performance applications. Both families have the same instruction set, share basic peripherals, have common pinouts and use the same tools for development. The PIC24 families are compatible with dsPIC DSCs for easy migration when additional performance or DSP capability is required.

PIC24F: Lowest Power 16-bit MCUs

With 16 MIPS performance and an extensive peripheral set, including a graphics controller, USB OTG and capacitive touch sense interface, the PIC24F MCUs are cost-effective for the most demanding 16-bit applications. Serial communication peripherals include up to 4 UARTs, 3 SPI and 3 I²C™. With the introduction of XLP Technology, select PIC24F devices have industry leading low power performance with sleep numbers as low as 20 nA and RTCC operation down to 400 nA.

Relative Code Size (in bytes) for 16-bit Applications

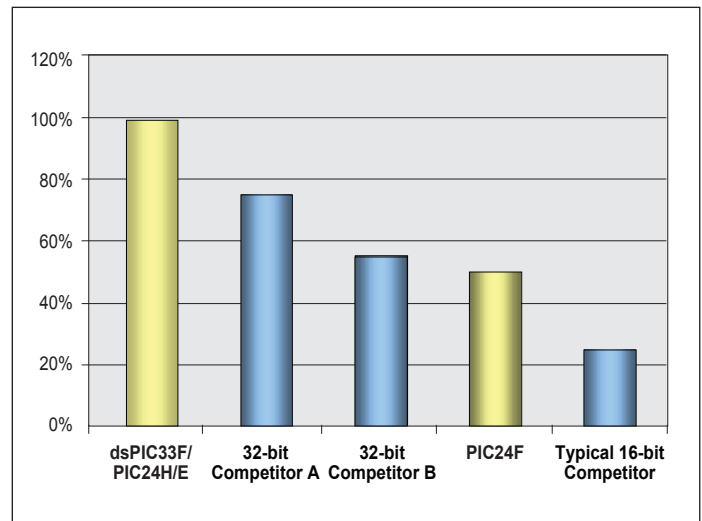

PIC24H/E: Highest Performance 16-bit MCUs

PIC24 devices offer 40/70 MIPS performance with a combination of large memory and a wide variety of package options. They also includes large Flash in smaller packages (5x5 mm). The built-in peripherals include high performance 12-bit ADC and general purpose and motor control 16-bit PWMs. Communication peripherals include up to 2 ECAN™ modules, 4 UARTs (with IrDA® support), 4 SPI, 2 I²C and USB OTG. High performance 16 channel Direct Memory Access (DMA) provides better data handling capability optimizing CPU throughput. AEC-Q100-qualified extended (125°C) and high-temperature (150°C) options for industrial and automotive applications are available.

Optimized C Compiler

Supporting the PIC24 MCU and dsPIC DSC families, Microchip's 16-bit architecture was designed to optimize C language code size. The architecture was co-developed by compiler writers who emphasized the need for an orthogonal instruction set, many general-purpose registers, powerful indirect with offset addressing and a software stack. Now you can achieve leadership code size in applications, helping your project team hit schedule and code size targets. Reduced code size provides the opportunity to use a smaller memory device, spend less time optimizing code size and respond to those marketing requests for "just one more feature."

Relative Performance/MHz

Benefits of Microchip's 16-bit Embedded Control Solutions

16-bit Digital Signal Controller (DSC) Portfolio

Does your embedded control application demand performance for advanced motor control, digital power, speech and audio processing? Alternatively, do you want to implement digital filters and FFT algorithms for signal analysis?

dsPIC® DSCs offer innovative peripherals and required performance for these needs. Our dsPIC family is a 100% PIC® MCU with great math. dsPIC DSCs blend the performance of DSP with the simplicity of an MCU.

Versatile 5 Volt dsPIC30F DSCs

The 30 MIPS dsPIC30F family is developed for applications that benefit from a wide operating voltage (2.5 to 5.5V), extremely low standby current, integrated EEPROM, and for those that prefer 5V operation due to system considerations.

dsPIC33F/E: Highest Performance 16-bit MCU with Integrated DSP

The 40/70 MIPS dsPIC33 core is designed to execute and control the high speed precision digital control loops and digital audio and speech processing. The optimized motor control and digital power conversion peripherals include the highest performance ADC, PWMs, USB OTG and analog comparators. A wide variety of memory and package options, audio peripherals, communication peripherals, 15 channel DMA and general purpose peripherals provide flexibility to your high performance embedded control designs. AEC-Q100-qualified extended and high-temperature options for industrial and automotive applications are available.

Example dsPIC® DSP Performance

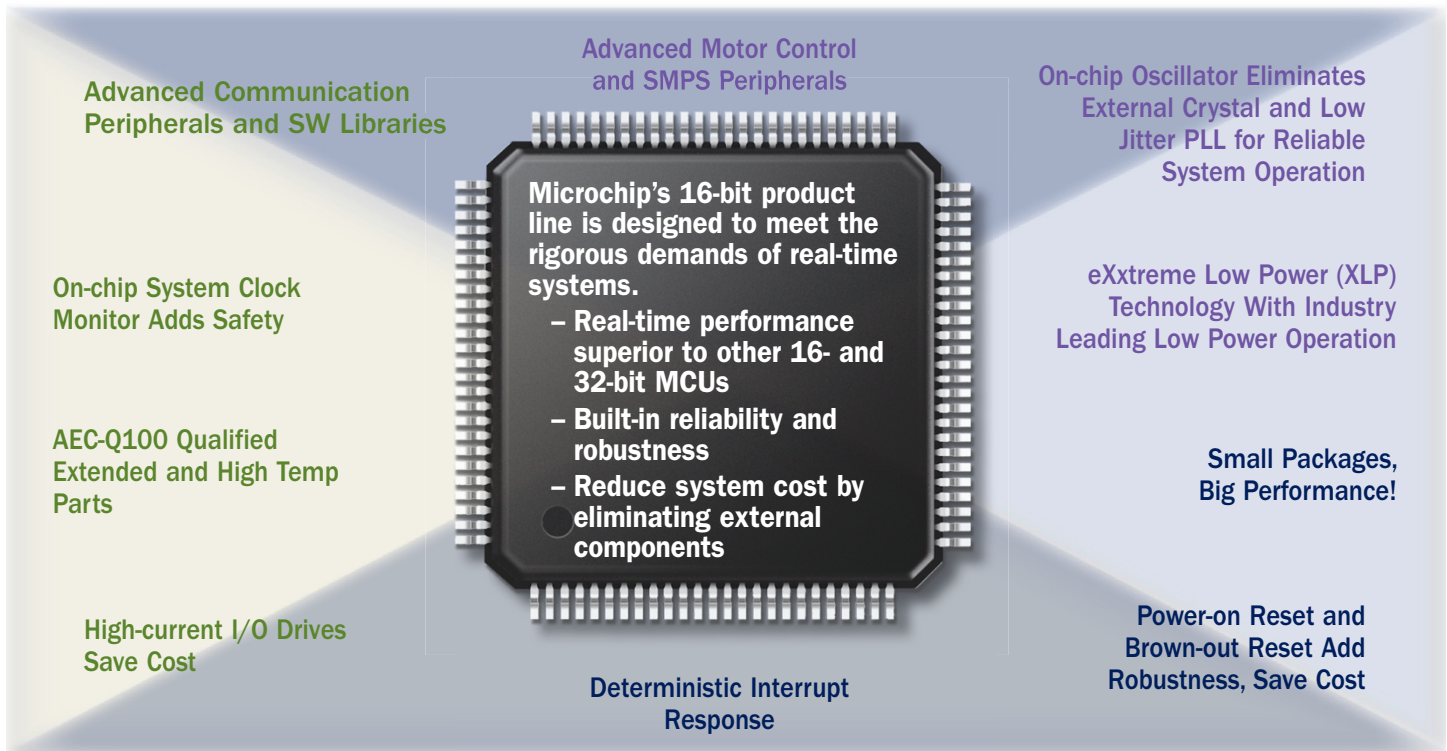

Function	Conditions*	Execution Time @70 MIPS
Complex FFT**	N=64	55.6 µs
Block FIR	N=32, M=32	17.5 µs
Block IIR Canonic	N=32, S=4	17.0 µs
Matrix Add	C=8, R=8	3.1 µs
Matrix Transpose	C=8, R=8	3.4 µs
Vector Dot Product	N=32	1.7 µs

*C = # columns, N = # samples, M = # taps, S = # sections, R = # rows

**Complex FFT routine inherently prevents overflow.

1 cycle = 14.29 nanoseconds @ 70 MIPS

Designed for real-time control, Microchip's 16-bit DSCs and MCUs offer high performance, innovative features, outstanding reliability, robustness and reduced system cost.

16-bit Product Features Overview

CPU, Systems & Memory

Operating Range PIC24F

DC to 16 MIPS
V _{DD} range: 1.8 to 5.5V
Ind. (-40° to 85°C) Ext. (-40° to 125°C)

Operating Range PIC24H/E & dsPIC33F/E

DC to 40/70 MIPS
V _{DD} range: 3.0 to 3.6V
Ind. (-40° to 85°C) Ext. (-40° to 125°C)
High-Temp (-40° to 150°C)

Operating Range dsPIC30F

DC to 30 MIPS
V _{DD} range: 2.5 to 5.5V
Ind. (-40° to 85°C) Ext. (-40° to 125°C)

High Performance CPU

Single cycle execution (most instructions)
C compiler optimized instruction set
16-bit wide data path
76 base instructions: mostly 1 word/1 cycle
16 16-bit general purpose registers
Software stack
16x16 signed fractional/integer multiplier
32/16 and 16/16 divide
40-stage barrel shifter
DSC additions (dsPIC30 & dsPIC33):
• Adds 8 base DSP instructions
• 2 40-bit accumulators with rounding and saturation options
• Single core combines MCU & DSP features
• Adds Modulo and Bit-reverse address modes

System Management

Flexible clock options:
• Primary external clock, crystal, resonator
• Secondary lower power 32 kHz oscillator
• Internal RC: fast or low power
• Integrated low jitter PLL
– PLL sourced by ext. and int. clock sources
Programmable power-up timer
Oscillator start-up timer/stabilizer
Watchdog Timer with its own RC oscillator
Clock switching/fail-safe clock monitor

Interrupt Controller

5 cycle fixed latency
Up to 118 interrupt sources, up to 5 external
7 programmable priority levels
4 processor exceptions and software traps

Power Management/VBAT Battery Backup

Switch between clock sources in real-time
Programmable power-on reset start up
Programmable High/Low-Voltage Detect (HLVD)
Programmable brown-out reset
Idle, Sleep and Deep Sleep modes with fast wake up

On-chip Flash, Data EEPROM and RAM

Flash program memory: up to 512 KB
Auxiliary Flash memory: up to 24 KB
Data EEPROM
• dsPIC30F: up to 4 KB
• PIC24F: up to 512B
Data RAM: up to 96 KB

Peripherals

Digital I/O

Peripheral Pin Select (PPS)
• Remap digital I/O
• Support most digital peripherals
Up to 122 programmable digital I/O pins
Wake-up/Interrupt-on-change on up to 52 pins
High current sink/source

Communication Modules

3-wire SPI: up to 3 modules
• Framing supports I/O interface to simple codecs
I ² C™: up to 3 modules
• Full Multi-master and Slave mode support
• 7-bit and 10-bit addressing
UART: up to 4 modules
• Interrupt-on-address bit detect
• Wake-up on Start bit from Sleep mode
• 4-character TX and RX FIFO buffers
• LIN and IrDA® support
USB OTG*
• Internal Boost Regulator requires minimal external components
• Separate 3.3V regulator
• Transparent RAM buffer interface
Codec interface module
• Supports I ² S and AC97 protocols

Timers/Capture/Compare/PWM

Timer/counters: up to nine 16-bit timers
• Can pair up to make 32-bit timers
• 1 timer can run as real-time clock
Input capture: up to 16 channels
• Capture on rising, falling or both edges
• 4-deep FIFO on each capture
Output compare: up to 16 channels
• Dedicated timer
• Single or dual 16-bit compare mode
• 16-bit glitchless PWM mode

Auxiliary Functions

LCD Segment Driver:
• 60 Segment x 8 Common Driver
Graphics Controller Features:
• 3x graphics hardware acceleration units
• Color look-up table with up to 256 entries
• Direct interface to monochrome, C-STN, TFT, OLED
Parallel Master Slave Port (PMP/PSP):
• 8-bit Parallel IO, highly configurable
• Communicates with external data memory, communications peripherals, LCDs
• Supports 8-bit or 16-bit data
• Supports 16 address lines
Hardware Real-Time Clock/Calendar (RTCC):
• Provides clock, calendar and alarm functions
Programmable CRC generator
Charge/Time Measurement Unit (CTMU)
• Capacitive Touch Sense Keypad I/F
• Provides 1 ns resolution time measurements

Hardware DMA PIC24F/H/E & dsPIC33F/E

Up to 15 channel DMA between RAM & peripherals
--

Analog Subsystems

On-chip high speed op amps
• High bandwidth op amps designed for motor control and general purpose applications
Analog comparators (up to 4):
• Programmable reference
Audio DAC:
• 2 ch. 16-bit 100 ksp/s
• Differential output
10-bit ADC:
• PIC24F: 500 ksp/s, 1 module
• PIC24FJXXMC: 1.1 Msps, 1 module
• dsPIC30F: 1 Msps, 1 module
12-bit ADC:
• PIC24F: 200 ksp/s 1 module
• dsPIC30F: 200 ksp/s 1 module
10-/12-bit ADC (user selectable):
• Available on PIC24H/E and dsPIC33F/E
• 10-bit: 1.1 Msps, 4 S&H
• 12-bit: 500 ksp/s, 1 S&H
• Some devices have 2 modules
Common ADC features:
Buffered output or DMA
• dsPIC30F & PIC24F: up to 24 channels auto scanning
• PIC24H/E & dsPIC33F/E: up to 32 channels auto scanning

Motor Control Peripherals

Motor Control PWM: up to 14 outputs
• Up to 7 duty cycle generators
• Independent or complementary mode
• Programmable dead time settings
• Edge or center-aligned PWMs
• Manual output override control
• Up to 10 fault inputs
• ADC samples triggered by PWM module
Quadrature encoder interface module
• Up to 2 modules
• Phase A, Phase B and index pulse input
High current sink/source

Switch Mode Power Peripherals

10-bit ADC Up to 4 Msps, Up to 6 sample and holds
PS PWM, 1 nS duty cycle resolution
Analog comparators
• Programmable reference

*Device, Embedded Host, On-The-Go

PIC24F MCU Family

16 MIPS, Low Cost/Low Power (non-XLP Devices)

The PIC24F family is ideal for cost-sensitive applications or applications migrating from 8-bit designs for a boost in performance or memory. In addition to a wide range of general purpose peripherals the PIC24F families include nanoWatt XLP low power technology, USB OTG, a Charge Time Measurement Unit (CTMU) for capacitive touch sense and a PMP that allows easy interface to a graphical user interface.

PIC24F MCU Family

XLP eXtreme Low Power MCUs

As more electronic applications require low power or battery power, energy conservation becomes paramount. Today's applications must consume little power, and in extreme cases, last up to 15-20 years, while running from a single battery. To enable applications like these, products with Microchip's nanoWatt XLP Technology offer the industry's lowest currents for Sleep, where extreme low power applications spend 90%-99% of their time. Benefits of XLP Technology:

- Sleep currents down to 10 nA
- Brown-out Reset down to 45 nA
- Watchdog Timer down to 200 nA
- VBAT and Real-Time Clock/Calendar down to 400 nA
- Active current down to 150 μ A/MHz

PIC24F MCU Devices with NanoWatt XLP Technology

Microchip products with nanoWatt XLP Technology offer the industry's lowest currents for Sleep, where extreme low power applications spend more than 99% of their time. Visit www.microchip.com/XLP for more XLP product information.

PIC24E MCU General Purpose Family

Up to 70 MIPS, Highest Performance MCU

Microchip's PIC24E general purpose microcontroller family features the highest speed core (up to 70 MIPS) with excellent performance and code density. It offers superior ADC performance, enhanced CAN communication, easier graphic display interface through 8-bit parallel master port and up to 15 DMA channels for extensive data movement. These devices are available in various packages and with extended (125°C) temp option.

PIC24E MCU Motor Control Family

Up to 70 MIPS, High Performance Motor Control MCU

Microchip's PIC24E motor control family of microcontrollers features a high speed core (up to 70 MIPS) with excellent performance and code density. These MCUs enable the design of motor control systems that are more energy efficient, quieter in operation, have a great range and extended life. They can be used to control brushless DC, permanent magnet synchronous, AC induction and stepper motors.

PIC24H MCU General Purpose Family

40 MIPS, High MCU Performance

Microchip's PIC24H general purpose microcontroller family features the highest 16-bit MCU performance and excellent code density. The PIC24H family offers CAN communication, superior ADC performance, easier graphic display interface through 8-bit parallel master port and extensive data movement through DMA channels. PIC24H devices are available in small packages with scalable memory and extended (125°C) and high temp (150°C) options.

†PIC24H devices feature one or two user-selectable 1.1 Msps 10-bit ADC (4 Sample and Hold) or 500 ksps 12-bit ADC (1 Sample and Hold).

*Parts available with High Temperature options.

dsPIC33E DSC Product Family

70 MIPS Motor Control and General Purpose Family

Microchip's dsPIC33E motor control family of digital signal controllers (DSCs) features a high speed dsPIC DSC core (Up to 70 MIPS) with integrated DSP and enhanced on-chip peripherals. These DSCs enable the design of high-performance, precision motor control systems that are more energy efficient, quieter in operation, have a great range and extended life. They can be used to control brushless DC, permanent magnet synchronous, AC induction and stepper motors. These devices are also ideal for high-performance general purpose applications.

dsPIC33F DSC Product Family

General Purpose Family

The 40 MIPS dsPIC33F general purpose digital signal controllers offer the performance of DSP with the simplicity of an MCU. The dsPIC33F core is designed to execute digital filter algorithms, high speed precision digital control loops and digital audio and speech processing. A wide variety of memory and package options, audio peripherals, communication peripherals, DMA and general purpose peripherals provide flexibility to high performance embedded control designs.

dsPIC33F DSC Product Family

Motor Control and Power Conversion Family

Microchip's 16-bit dsPIC33F motor control family of Digital Signal Controllers (DSCs) provide high performance 16-bit MCUs with integrated DSP and on-chip peripherals. These DSCs enable the design of high-performance, precision motor control systems that are more energy efficient, quieter in operation, have greater range and an extended life. These motor control DSCs can be used to control brushless DC, permanent magnet synchronous, AC induction and stepper motors. These devices are also ideal for switched mode power supplies and power factor correction applications.

dsPIC33F DSC Product Family

SMPS and Digital Power Conversion Family

Implementing high speed precision digital control loops for power conversion applications requires a high-performance DSP engine along with specialized Switch Mode Power Supplies (SMPS) peripherals. Microchip's 16-bit dsPIC33F SMPS DSCs provide on-chip peripherals specifically designed for high-performance, digital power supplies. SMPS peripherals include high speed PWM, ADC and analog comparators. The dsPIC33F SMPS family supports applications such as, induction cooking, UPS, inverter, intelligent battery chargers, power factor correction, HID lighting, fluorescent lighting, LED lighting, AD-DC and DC-DC conversion and motor control applications. SMPS and digital power conversion devices are offered in 40 MIP and 50 MIP versions. Please see www.microchip.com for availability.

dsPIC30F DSC Product Family

General Purpose Family

The 30 MIPS dsPIC30F family is developed for applications that benefit from a wide operating voltage (2.5 to 5.5V), extremely low standby current, integrated EEPROM and for those that prefer 5V operation due to system considerations. The variants with Codec interfaces are well suited for speech and audio applications.

Motor Control and Power Conversion Family

This dsPIC30F family supports motor control applications, such as brushless DC, single- and 3-phase induction and switched reluctance motors. These are also ideal for UPS, inverter and power factor correction applications.

World Class Development Tools

MPLAB® Integrated Development Environment (IDE)

Microchip's 16-bit controllers are supported by MPLAB Integrated Development Environment. MPLAB IDE is a FREE development environment that is common to all Microchip 8-, 16- and 32-bit products, making it possible to use across many of your designs. When combined with Microchip's PICkit™ 3 In-Circuit Debugger, you can get started with a complete development tool chain for as little as \$44.95.

All of Microchip's MCU and DSC tools operate cohesively under the MPLAB IDE umbrella. The powerful and easy-to-use MPLAB IDE has all of the advanced edit/build/debug features you would expect from a 32-bit debug environment. MPLAB IDE integrates not only software, but all of Microchip's hardware tools and many third party tools. Key features of MPLAB IDE include:

- Project build and management
- Flexible watch windows
- Mouse over variable inspection
- MATLAB Device Blocks for MPLAB IDE (for dsPIC30 and dsPIC33 DSCs)
- Full feature code editor with color context
- Source level debug in ASM and C
- Searchable trace buffers
- Version control integration
- Real-time data monitoring

Available for MPLAB IDE

Assembler/Linker/Librarian

The MPLAB ASM30 is a full-featured macro assembler. User defined macros, conditional assembly and a variety of assembler directives make the MPLAB ASM30 a powerful code generation tool.

MPLAB SIM Software Simulator

The MPLAB SIM Software Simulator is a full-featured, cycle accurate software simulator. In addition to simulating the CPU and the instruction set, it also supports key peripherals.

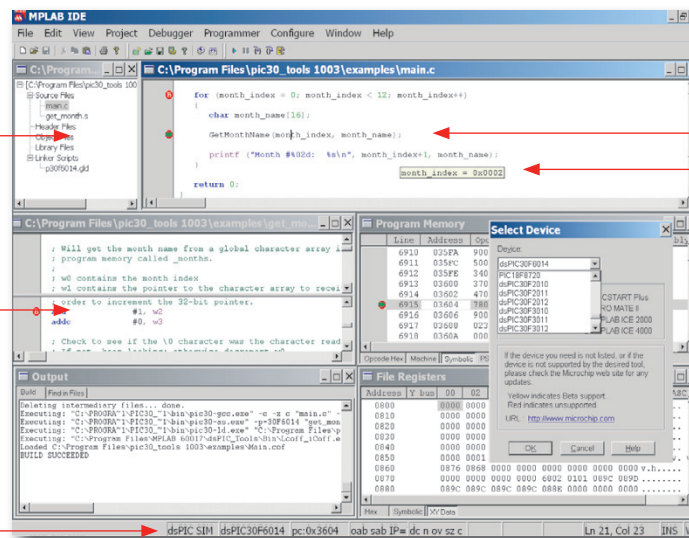

MATLAB/Simulink Device Blocks for dsPIC DSCs

The Microchip Device Blocksets for MATLAB Simulink provide a set of interface-compliant configuration and run-time peripheral blocks for the dsPIC30 and dsPIC33 DSCs. Complete applications can be created in the form of a MATLAB/SIMULINK model using blocksets provided by Microchip and Simulink. C code for the application will be generated. These blocksets are compatible with the MATLAB plug-in available in MPLAB IDE.

Powerful Project Manager handles multiple projects and all file types

Color-keyed editor makes source code debug easier

Status bar updates on single step or run

Set break/trace points with a click of the mouse

Simply move your mouse over a variable to view or modify

Fully customizable watch windows to view and modify registers and memory locations

World Class Development Tools

MPLAB® X IDE

Universal and Integrated Tool Set

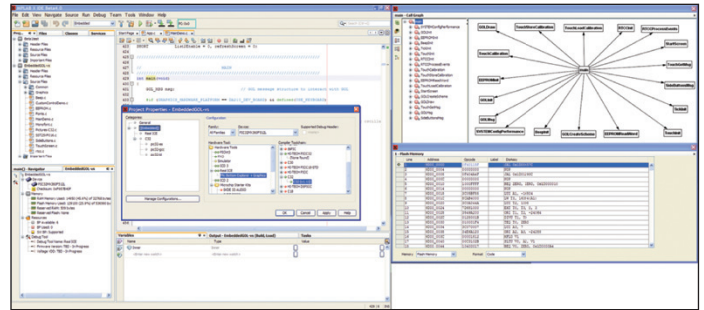

MPLAB X IDE is a single, universal graphical user interface for Microchip and third party software and hardware development tools. It is the industry's only IDE to support an entire portfolio of 800+ 8-bit, 16-bit and 32-bit PIC® MCUs, dsPIC® DSCs and memory devices.

MPLAB X supports Microchip's compilers, emulators, debuggers and starter kits, as well as many third-party tools. Moving between all of your favorite Microchip tools and upgrading from software simulators to hardware debugging and programming tools is simple with this IDE's seamless user interface.

Powerful Yet User-Friendly Interface

With complete project management, visual call graphs, a configurable watch window and a feature-rich editor that includes code-completion, context menus and a task navigator, MPLAB X is flexible and friendly enough for new users.

MPLAB X is also fully equipped for the needs of experienced users with the ability to support multiple tools on multiple projects with multiple configurations and simultaneous debugging.

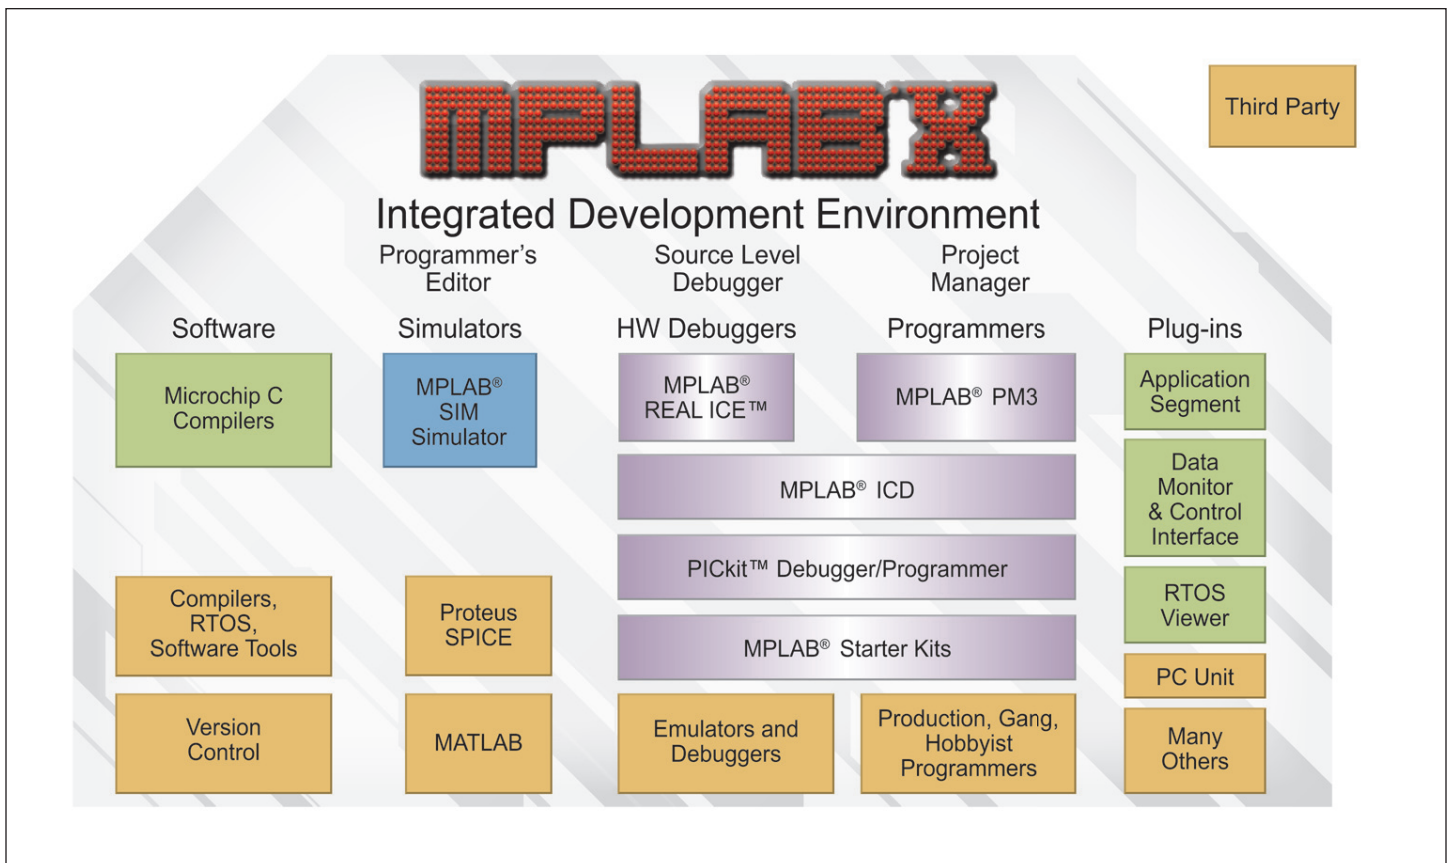

Open-Source Platform

Based on the NetBeans™ Platform, MPLAB X supports a host of free software components and plug-ins from the NetBeans community for high-performance application development customized to your needs. In addition to local file history, MPLAB X is also compatible with revision control plug-ins and Bugzilla.

Cross-Platform

Using MPLAB X, users can run their favorite toolset and develop their next embedded application on Windows®, Linux or Mac OS X.

World Class Development Tools

Popular C Compilers

MPLAB® C Compilers

Microchip's MPLAB C compilers are full-featured, ANSI compliant high-performance tools tightly integrated with MPLAB IDE. Source level debugging allows single stepping through C source code and inspecting variables and structures at critical points in the code. Integration with MPLAB IDE means there is a single, consistent environment to write code and to debug with the free MPLAB SIM simulator or with MPLAB in-circuit debuggers and emulators. Code can be programmed into the target using the hardware debuggers or with Microchip's device programmers. Compiler switches and linker customizations are done within MPLAB IDE to provide a full graphical front end to these powerful compilers. Editing errors and breakpoints instantly switch to the corresponding lines in source code. Watch windows show data structures with defined data types, including floating point.

MPLAB C Compiler for PIC24 MCUs and dsPIC® DSCs

The MPLAB C Compiler for PIC24 MCUs and dsPIC DSCs includes a complete ANSI C standard library, including string manipulation, dynamic memory allocation, data conversion, timekeeping and math libraries. The MPLAB C Compiler has a powerful code optimizer; other 16-bit MCUs generate as much as 165 percent larger code for the same application.

Math Libraries

dsPIC DSP Library

The dsPIC DSP Library provides a set of speed optimized functions for the most common digital signal processing applications. In total, 49 functions are supported by the DSP Library. It is part of the 16-bit Language Tools Libraries. The DSP Library provides significant performance savings over equivalent functions coded in "C" and allows developers to dramatically shorten their development time. The functions are callable from both 'C' and Assembly.

Fixed Point Math Library for PIC24 MCUs and dsPIC DSCs

The I/Q Fixed Point Math Library provides a set of speed optimized functions for the most common digital signal processing applications. This library provides significant performance savings over equivalent functions coded in C and allows developers to dramatically shorten their development time. The I/Q math library includes over 65 general-purpose functions composed of 28 functions supporting Q15 math and thirty seven functions supporting Q16 math. The IQ math functions are callable from both 'C' and Assembly.

Floating Point Math Library for PIC24 MCUs and dsPIC DSCs

The IEEE-754 Compliant Floating Point Math Library is the compiled version of the math library that is distributed with the highly optimized, ANSI-compliant MPLAB® C Compiler. It contains advanced single and double-precision floating-point arithmetic and trigonometric functions from the standard C header file <math.h>. The library delivers small program code size and data size, reduced cycles and high accuracy.

Library	Features
 Peripheral Driver Library	This library provides over 300 C utility functions.
 Math Libraries: Standard, Floating-Point & Fixed-Point	<ul style="list-style-type: none">■ ANSI C standard math functions■ IEEE-754 compliant floating point math Support for both single and double-precision■ I/Q math for fixed point numbers Support for both 1.15 and 16.16 formats
 DSP Algorithm Library	This extensive DSP building block library is fully optimized in assembly code for execution speed.

Download a full-featured, time-restricted eval version of the MPLAB C Compiler for PIC24 MCUs or dsPIC DSCs from the Microchip web site for evaluation.

www.microchip.com/compilers

General Purpose Development and Evaluation Tools

Debuggers, Emulators and Programmers

PICKit™ 3 In-Circuit Debugger (PG164130)

The MPLAB® PICKit 3 allows debugging and programming of PIC® and dsPIC® Flash microcontrollers at a most affordable price point using the powerful graphical user interface of the MPLAB Integrated Development Environment (IDE).

MPLAB ICD 3 In-Circuit Debugger/Programmer (DV164035)

The MPLAB ICD 3 In-Circuit Debugger/Programmer is a powerful, low-cost development tool. Running under MPLAB IDE, MPLAB ICD 3 can debug ASM or C source code, watch and modify variables, single step and set breakpoints.

MPLAB REAL ICE™ In-Circuit Emulation System (DV244005)

The MPLAB REAL ICE In-Circuit Emulator is Microchip's next-generation emulation and debugging system. This system provides a powerful in-circuit emulation platform for easy and rapid application development and debugging. The emulation is performed using special

hardware logic on the target device itself, eliminating the need for a separate emulator device.

MPLAB PM3 Device Programmer (DV007004)

MPLAB PM3 Device Programmer is a full-featured, production quality universal device programmer. Using interchangeable socket modules, the MPLAB PM3 supports virtually all programmable devices from Microchip.

MPLAB PM3 has improved programming time for many devices and offers a built-in interface for robust In-Circuit Serial Programming™ (ICSP™).

MPLAB® Starter Kits

MPLAB Starter Kits are designed to demonstrate the key features of the device family they represent. In addition to the external circuit needed to support and demonstrate the device, the starter kits include the circuitry necessary to debug and program the MCUs and DSCs. When combined with the MPLAB® IDE and the MPLAB C Compiler for PIC24 MCUs or dsPIC DSCs (Evaluation Edition), the starter kit allows designers to gain quick knowledge and experience with 16-bit MCU and DSC products.

MPLAB Starter Kit for dsPIC Digital Signal Controllers (DM330011)

The MPLAB starter kit for dsPIC Digital Signal Controllers is an excellent low cost platform to evaluate or learn about the dsPIC architecture. It is equipped with the hardware and software necessary to code and debug simple applications and also demonstrates the audio capability of the dsPIC DSC.

MPLAB Starter Kit for PIC24H MCUs (DM240021)

This starter kit is a complete hardware and software kit for exploring the power of PIC24H family of MCUs. The on-board PIC24HJ128GP504 controller is equipped with necessary software to demonstrate accelerometer based sample program with visual display and speech playback.

MPLAB Starter Kit for PIC24F MCUs (DM240011)

This starter kit is based on the PIC24FJ256GB110 family and is equipped with the hardware and software necessary to demonstrate the USB OTG peripheral and mTouch™ Capacitive Touch Sense technology.

dsPIC33E/PIC24E USB Starter Kit (DM330012/DM240012)

These starter kits provide a low-cost modular development system for Microchip's enhanced 16-bit Digital Signal Controllers or High-Performance Microcontrollers (MCUs). It comes with a preloaded demo software for the user to explore the new features of the dsPIC33E DSC family or the PIC24E MCU family.

Motor Control Starter Kit (MCSK) with mTouch™ Sensing (DM330015)

This starter kit with mTouch™ sensing is a complete, integrated development platform based on the dsPIC33FJ16MC102. It includes a USB interfaced debugger programmer, a complete drive circuit featuring Microchip's TC4428 dual 1.5A gate drivers, an on-board BLDC motor, a user configurable switch and an mTouch slider with LED indicators for speed control. Simply power the board using the included 9V supply and the pre-loaded code begins to execute.

General Purpose Development and Evaluation Tools

Development Boards

A variety of hardware development boards are available for the PIC24 MCU and dsPIC DSC, enabling designers to shorten their design cycle. These boards are designed to allow easy connection to an MPLAB® ICD 3 In-Circuit Debugger, MPLAB REAL ICE™ In-Circuit Emulator or MPLAB PM3 device programmer. All development boards include documentation and example source code to accelerate your design.

16-bit 28-pin Starter Development Board (DM300027)

This low cost development board provides an easy way to get started with any of Microchip's 28-pin 16-bit MCU or DSC devices.

nanoWatt XLP 16-bit Development Board (DM240311)

The XLP 16-bit Development Board is designed with eXtreme Low Power in mind. Designed as a true platform for low power development, it enables designs with sleep currents as low as 10 nA. The board is suitable for prototyping many low power applications including RF sensors, data loggers, temperature sensors, electronic door locks, metering sensors, remote controls, security sensors, smart cards and energy harvesting. The PICTail™ interface supports Microchip's extensive line of daughter cards for easy evaluation of your next low power application.

Microstick for dsPIC33F and PIC24H Development Board (DM330013)

The Microstick for dsPIC33F and PIC24H devices is designed to provide designers with an easy to use, economical development environment for 16-bit digital signal controllers and microcontrollers.

Microstick for 3V PIC24 K-series Development Board (DM240013-1)

Microstick for 3V PIC24F K-series is a flexible, USB powered development platform. It's the perfect solution for those looking to get started with Microchip's lowest cost 16-bit microcontroller families – the PIC24F K-series – for extremely cost sensitive applications.

Microstick II Development Board (DM330013-2)

Microstick II delivers a low-cost, easy-to-use development platform for Microchip's 16- and 32-bit microcontrollers and digital signal controllers. The USB-powered kit includes an on-board debugger/programmer, a DUT socket for easy device swapping, a user LED and reset button.

Audio Development Board for dsPIC33E (DM330016)

The audio development board features a 70 MIPS dsPIC33E MCU, a 24-bit Wolfson audio codec, a two-inch color LCD display, a USB interface and an onboard microphone. Supported by Microchip's free software libraries, the kit provides an ideal solution for the development of iPod music playback, speech and audio recording and playback, as well as MP3 decoding applications.

LCD Explorer Development Board (DM240314)

This development board supports Microchip's 100-pin microcontrollers with x8 common segment LCD drivers. The LCD Explorer provides an ideal platform for a customer to evaluate a MCU with an x8 Common LCD Driver on a 38 segment x 8 common LCD display. PICTail™ Plus connections allow customers to evaluate the selected MCU in a complex system by adding Microchip's PICTail Plus daughter boards.

PIC24H mTouch™ Capacitive Touch Evaluation Board (AC243026)

This evaluation board is designed to facilitate the development of capacitive touch-based applications using PIC24H-series microcontrollers. This board is intended to supplement the motherboard portfolio already included in the mTouch Capacitive Touch Evaluation Kit (DM183026-2).

PIC24FJ256DA210 Development Kit (DV164039)

This low cost development kit is an efficient means to evaluate the features and performance of the PIC24FJ256DA210 with integrated graphics, mTouch™ and USB. This kit is an ideal platform for new graphical human interface developers. It bundles the PIC24FJ256DA210 Development Board (DM240312), a 3.2" Truly 240x320 TFT Display Board (AC164127-4), three Graphics Display Prototype Boards (AC164139), the MPLAB ICD 3 Debugger with USB Cable (DV164035) and accessories. For those interested in purchasing the kit components, each item can also be purchased separately.

Enhanced mTouch Capacitive Touch Evaluation Kit (DM183026-2)

This evaluation kit provides a simple platform for developing a variety of capacitive touch sense applications using PIC16F, PIC18F, PIC24F and PIC32 microcontrollers. The diagnostic tool provided allows the user to analyze application-critical information in real-time as it relates to touch sensor behavior.

Explorer 16 and PICTail™ Plus Daughter Board System

Explorer 16 Development Board (DM240001/DM240002)

This development board offers an economical way to evaluate Microchip's 16- and 32-bit MCUs, and dsPIC33F DSC families. The combination of versatility and expandability and supporting PICTail™ Plus daughter cards allows designer's to evaluate

complex software libraries and hardware with minimal time and effort. Features include:

- Processor PIMs (Plug-In Modules)
 - DM240001: two interchangeable PIMs, one each for the PIC24FJ128GA010 and the dsPIC33FJ256GP710 DSC
 - DM240002: features a PIM for the PIC24FJ64GA004 and dsPIC33FJ32GP204

- Alpha-numeric 16x2 LCD display
- Interfaces to MPLAB® ICD 3 In-Circuit Debugger, REAL ICE™ In-Circuit Emulator and RS-232
- Includes Microchip's TC1047A high accuracy, analog output temperature sensor
- Full documentation CD includes user's guide, schematics and PCB layout
- Expansion connector to access full devices pin-out and bread board prototyping area
- PICTail Plus connector for expansion boards

PICTail™ Plus Daughter Boards

- Allows for the easy addition of complex hardware
- Allows for the easy evaluation of software libraries
- Provides expansion for application specific hardware

Description	Part Number	List Price ⁽¹⁾	Devices Supported

Advanced Development Boards and Reference Designs for Motor Control Applications

Microchip offers a number of hardware tools to assist in the development of motor control applications. These tools work with Microchip's MPLAB® IDE and an in-circuit debugger to download and debug application software. Our systems make it easy to customize the software from our application notes and demo code to run different motors.

dsPICDEM™ MCSM Stepper Motor – Motor Control Development Board/Kit (DM330022)/(DV330021)

This development board is intended for low-voltage (up to 80 volts at 3 amps) 2-phase uni-polar or bi-polar stepper motor (4, 6 or 8 wire) applications. It provides a low-cost system for users to evaluate and develop applications using dsPIC33 motor control DSCs via a Plug-In Module (PIM) or 28-pin SOIC socket. A USB serial interface for RTDM is provided. Feedback support includes current and voltage. Demo software to run motors in open-loop or closed-loop with full or variable micro-stepping is provided. A DMCI/RTDM GUI for controlling step commands, motor parameter input and operation modes is included. The kit includes a stepper motor and a 24-volt power supply. MPLAB ICD 3 In-Circuit Debugger or REAL ICE™ In-Circuit Emulator is required for programming or debugging operations.

dsPICDEM MCLV Development Board (DM330021)

This development board is intended for low-voltage (up to 48 volts at 10 amps) BLDC sensored or sensorless applications. It provides a low-cost system for users to evaluate and develop applications using dsPIC33 motor control DSCs via a Plug-In Module (PIM) or 28-pin SOIC socket. Serial interfaces include: RS-232C, CAN, LIN and USB (for RTDM). Feedback support includes: Hall-Effect Sensors, Shaft Encoder, Back EMF voltages and single or dual shunt resistors for current. MPLAB ICD 3 In-Circuit Debugger or REAL ICE In-Circuit Emulator is required for programming or debugging operations.

dsPICDEM MCHV Development System (DM330023)

This development system is intended for high-voltage (up to 400 volts at 6.5 amps) BLDC, PMSM and ACIM sensored or sensorless applications. It provides a low-cost IPM-based system for users to evaluate and develop applications using dsPIC33 motor control DSCs via a Plug-In Module (PIM) or a 28-pin SOIC socket. Isolated serial interfaces include RS-232C and USB (for RTDM). Feedback support includes: Hall-Effect Sensors, Shaft Encoder, Back EMF voltages and single or dual current shunt resistors. A PFC circuit is provided to meet regulatory requirements. An isolated built-in debugger (similar to MPLAB ICD 3) permits a direct connection with a PC.

Motor Control Development Systems for dsPIC30F PICDEM™ MC LV Motor Control Development Board (DM183021)

This development board is intended for low-voltage (up to 48V at 2 amps), Brushless DC (BLDC) sensored or sensorless applications. It provides a low-cost board for users to evaluate and develop applications using Microchip's 28-pin PIC18FXX31 and dsPIC30F motor control devices. An 18-pin translator board (AC162078) is also available and allows the PIC18F1330 to be installed on the board. Feedback support includes Hall-Effect Sensors and Back EMF voltages. MPLAB ICD 3 In-Circuit Debugger or REAL ICE In-Circuit Emulator is required for programming or debugging operations.

dsPIC33E Dual Motor Control Plug-In Module (PIM) (MA33027)

This Dual Motor Control PIM is designed to facilitate the development of motor control applications using two motors and one dsPIC33E Digital Signal Controller (DSC). Two Microchip PIM based motor control development boards can be used with this PIM to control two BLDC, PMSM, ACIM or stepper motors. A flexible cable connects the two boards together and routes all signals to the appropriate pins on the dsPIC33E DSC. The configuration of the cable and signals was carefully chosen to support a wide range of dual motor configuration application notes written for the dsPICDEM™ MCLV, MCHV and MCSM development boards.

Motors

You can provide your own motor or purchase one of the motors used in our application notes and guaranteed to run, right out of the box:

- AC300024 – 2-phase, 8-wire stepper motor
- AC300020 – 24V BLDC motor
- AC300022 – 24V BLDC motor with shaft encoder
- AC300021 – 208V, 1/3 HP 3-phase AC induction motor

Advanced Development Boards and Reference Designs for Digital Power Applications

AC/DC Reference Design

This design is a completely digitally controlled full-featured 300W (5V/23A and 3.3V/69A) power supply with active PFC. The design offers a universal AC input with active power factor correction followed by two stages of DC/DC power

conversion. The first stage converts the high-voltage DC link to a 12V DC bus via a zero voltage transition full-bridge converter incorporating secondary side synchronous rectification. The second stage consists of single-phase and multi-phase buck converters.

Buck/Boost Converter PICtail™ Plus Card (AC164133)

A low-cost development platform for dsPIC33FGS SMPS devices, the buck/boost converter PICtail Plus card has two buck stage outputs and one boost stage output. The buck/boost converter operates from an input supply of +9V

to + 15V DC. Various performance measures like digital control loop performance of power conversion, dynamic load performance, multi-phase buck and synchronous buck converter operation, parallel operation of two buck converters and multiple output control with a single dsPIC® device can be evaluated for dsPIC33FGS SMPS solutions. This board can be used with either the Explorer 16 board or the 16-bit 28-pin starter board and the dsPIC33F SMPS and digital power conversion devices.

Quarter Brick DC/DC Converter Reference Design

This reference design provides an easy method to evaluate the power, and features of SMPS DSCs in high density quarter brick DC-DC converters for Intermediate Bus Architectures (IBA). This

reference design is implemented using a single dsPIC33F “GS” digital power DSC from Microchip that provides the full digital control of the power conversion and system management functions.

DC/DC LLC Resonant Converter Reference Design

This reference design operates over a wide input voltage range (350-420V DC) with a nominal input of 400V, providing a 12V DC output, while maintaining high-voltage isolation between the primary and secondary. This reference

design is implemented using a single dsPIC33F “GS” digital power DSCs from Microchip that provides the full digital control of the power conversion and system management functions.

Digital Power Interleaved PFC Reference Design

High performance power supplies are used in a wide variety of applications ranging from telecommunication equipment, industrial equipment, digital televisions, lighting, air conditioners and

other home appliances. They all need solutions for power factor correction to improve overall efficiency, improve the input power factor, voltage regulation and Total Harmonic Distortion (THD) of the input current. Digital interleaved power factor correction methods provide many benefits over older PFC techniques.

Digital Pure Sine Wave Uninterruptible Power Supply (UPS) Reference Design

This reference design is based on the dsPIC33F “GS” series of digital power DSCs. This reference design demonstrates how digital power techniques when applied to UPS

applications enable easy modifications through software, the use of smaller magnetics, intelligent battery charging, higher efficiency, compact designs, reduction in audible and electrical noise via a purer sine-wave output, USB communication and low-cost overall bill-of-materials.

Digital LED Lighting Development Kit

This LED lighting development kit enables designers to quickly leverage the capabilities and performance of the dsPIC33 ‘GS’ DSCs and this reference design to create a 100% digitally controlled ballast function, while including advanced

features such as dimming and color hue control. The dsPIC33 ‘GS’ devices can support an entire system implementation for LED lighting products, including power-conversion circuits, such as AC-to-DC and DC-to-DC conversion, along with functions such as Power Factor Correction (PFC), which are necessary for a complete product and lower overall system cost.

Grid Connected Solar Micro Inverter Reference Design

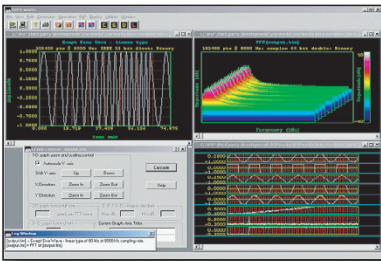

This reference design demonstrates the flexibility and power of SMPS DSCs in grid connected power conversion systems. This reference design works with any PV panel of maximum of 220W

having open circuit voltage between 25V to 55V DC. This reference design will ensure maximum power tracking for PV panel voltage between 25V to 45V DC. Two versions of this reference design are available to support 110V and 220V grid.

Additional information for all reference designs is available at www.microchip.com/power.

Develop DSP Algorithms and Debug Application Software: The Easy Way

FREE dsPICworks™ Data Analysis and DSP Software

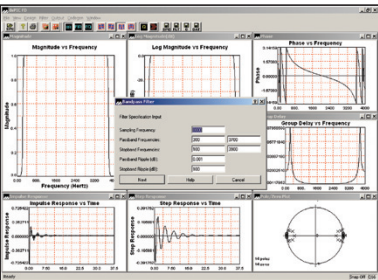

The dsPICworks Data Analysis and DSP Software makes it easy to evaluate and analyze DSP algorithms. You can run a variety of DSP and arithmetic operations and analyze your data in both time and frequency domain.

Key features of the dsPICworks Data Analysis and DSP Software:

- Visually analyze time and frequency domain data
- DSP operations: FFT, convolution, correlation, DCT and filtering
- Waveform synthesis
- Tool generates one-, two- and three-dimensional frequency graphs
- Data import/export options to interface with MPLAB IDE and MPLAB ASM30
- Support for fractional, integer and IEEE floating point data in decimal and hexadecimal notation

Digital Filter Design Tool

The Digital Filter Design Tool makes designing and analyzing FIR and IIR filters easy. Enter frequency specifications and filter code and coefficients are generated automatically. Graphical output windows provide the desired filter's characteristics.

Digital Filter Design Lite Tool

Not ready to purchase the whole Digital Filter package? Why not start Lite? The Digital Filter Design Lite Tool includes most of the features of the full-featured version at a fraction of the cost.

	Filter Design	Filter Design Lite

FREE Data Monitor & Control Interface – A Free MPLAB IDE Plug-in

The Data Monitor and Control Interface (DMCI) provides dynamic access and control of software variables. It is useful for tuning application parameters and viewing run-time application data graphically. Software parameter changes are updated during run-time. Feature highlights include:

- MPLAB Project Aware – The current device and software variables are recognized automatically by DMCI
- Compiler Independent
- Debug Tool Independent
- Provides Effortless Graphical Analysis of Application Historical Data

FREE Real-Time Data Monitor (RTDM)

The Real-Time Data Monitor saves development and testing time for embedded control applications. RTDM allows users to make a change to a software parameter and see the effect immediately without stopping the application execution. A serial USB or UART cable supports bi-directional data transfers between the host PC and the MCU/DSC.

Libraries for Speech and Audio Applications

Speech Encoding/Decoding Libraries

Three options exist for a variety of speech compression/encoding and decompression/decoding applications:

- FREE** ■ The library is an implementation of the ITU-T G.711 standard which uses A-law or μ -law companding to achieve 2: 1 compression.
- FREE** ■ G.726A is an implementation of the ITU-T G.726 Annex A standard which uses Adaptive Differential Pulse Code Modulation (ADPCM) encoding algorithm. It can achieve up to an 8:1 compression ratio depending on output bit rate selected.
- FREE** ■ Speex is a popular standard in the open source software community which has been adapted for the dsPIC DSC. It uses Code Excited Linear Prediction (CELP) algorithm. It can achieve a 26:1 compression ratio.

Vocoder	Incoming Data Rate (16-bit)	Output Rate	Speech Quality (MOS)	MIPS ⁽¹⁾	Flash (KB)	RAM (KB)	Target
G.711	8 kHz	64 kbps	4.3-4.5	1	3	3.6	PIC24/dsPIC DSC
G.726A	8 kHz	16-40 kbps	4.3-4.5	15	6	4	dsPIC DSC
Speex	8/16 kHz	8-12.8 kbps	3.7-4.2	20/24	24/38	7.6/12	dsPIC DSC

Note 1: Includes both encoder and decoder processing in full duplex.

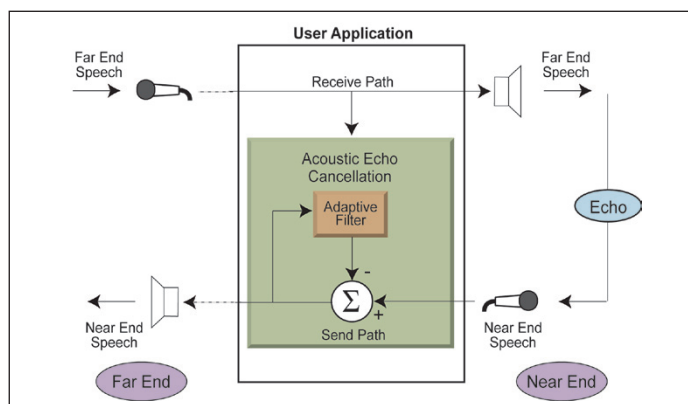

FREE Noise Suppression Library

This application library suppresses the noise interference in a speech signal, such as ambient noise picked up by a microphone while capturing speech. This algorithm is particularly useful for systems such as hands-free phones, speakerphones, intercoms and headsets where an isolated noise reference is not available. The algorithm handles 0-4 kHz audio bandwidth and provides adjustable noise reduction up to 44 dB.

FREE Acoustic Echo Cancellation Library

This library provides a function to eliminate the echo generated in the acoustic path between a speaker and a microphone, such as in a speakerphone or an intercom system. This library is compatible with the G.167 standard and provides 16, 32, 64 or 128 ms echo delays. It handles 0-4 kHz audio bandwidth and provides echo cancellation of 40-50 dB. It also includes some sample rate conversion functions.

FREE Line Echo Cancellation Library

This library provides a function to cancel electrical line echoes caused by 2- to 4-wire conversion hybrids in telephone lines. The library can be used in long distance voice communication applications, especially in links involving satellite networks and intercontinental long haul networks, as well as digital networks, such as Voice over IP (VoIP). This library is compatible with the ITU-T G.168 recommendation. The library can be used for full-duplex operation. It handles 0-4 kHz audio bandwidth (8 kHz sampling of 16-bit speech data).

FREE dsPIC® DSC Automatic Gain Control Library

The dsPIC® DSC Automatic Gain Control Library automatically adjusts the amplitude of a speech signal to match a set level. This is useful in speech applications where the distance between the speech source and the microphone is not fixed. The Automatic Gain Control Library can be used readily with Microchip's Speech and Audio Solutions for speech signal pre-processing.

FREE Equalizer Library

The Equalizer library allows applications to change the tonal properties of a signal by offering an 8-band frequency band amplitude control. The library processes an 8 kHz sampled signal. The library works readily with the rest of Microchip's dsPIC DSC Speech and Audio Processing Algorithms.

FREE Speech and Audio Fast Forward (SAFF)

The dsPIC DSC Speech and Audio Fast Forward tool provides user's with real-time control of Microchip's Speech and Audio Processing Algorithms as they are running in an embedded system application. This PC GUI tool facilitates code generation and easy tuning of Microchip's Noise Suppression, Acoustic Echo Cancellation, Line Echo Cancellation and Equalizer algorithms in speech and audio applications by simplifying parametric tuning of algorithms.

Connectivity and Embedded Control Libraries

USB On-The-Go Library

Microchip's USB support consist of a series of application notes with software that demonstrate and support the development of embedded host, peripheral and On-The-Go functions. Specific driver classes include Human Interface Device (HID) class for user interfaces, and Mass Storage Device (MSD) class for memory devices and a Microchip custom device class driver. USB application demos include thumb drive bootloader, mass storage, USB charger and a printer host. PIC18, PIC24F, PIC24E, dsPIC33E and PIC32 MCUs are supported by Microchip's USB Framework. All USB application notes are available free of charge at www.microchip.com/usb

Microchip's Free TCP/IP Stack Software (ENC28J60 and ENC624J600 Driver)

The Microchip TCP/IP Stack is a free suite of programs that provide services for standard TCP/IP-based applications (HTTP server, FTP server, etc.) or it can be used in a custom TCP/IP-based application. The stack is portable across all PIC18, PIC24 and dsPIC® products. It contains support for MPLAB C18, HI-TECH PIC18 and MPLAB C Compiler for PIC24 MCUs and dsPIC DSCs.

ZigBee® PRO Wireless Networking Protocol Stack

ZigBee PRO is a wireless network protocol specifically designed for low data rate sensors and control Networks. There are a number of applications that can benefit from the ZigBee protocol including building automation networks, home security systems, industrial control networks, remote metering and PC peripherals. ZigBee may be the appropriate solution if your product must interact with other vendor's products on a wireless network. Microchip offers a ZigBee PRO Compliant Platform, ZigBee RF4CE compliant Platform, and ZigBee application profiles.

MiWi™ Wireless Networking Protocol Stacks

The MiWi and MiWi P2P Wireless Networking Protocols are simple, easy to use protocols designed for low data rate, short distance, low-cost networks. These protocols operate on both the IEEE 802.15.4 and Sub-GHz RF transceivers for Wireless Personal Area Networks (WPANs). The MiWi protocols provide an easy to use alternative for wireless communication. In particular, the MiWi protocols target peer-to-peer, star, or mesh networks with few hops between nodes. The MiWi Protocol stacks are applicable with Microchip's MRF24J40 2.4 GHz Transceiver/modules for IEEE 802.15.4 compliant networks and Microchip's Sub-GHz transceivers.

IrDA® Standard Stack for Microchip 16-bit MCUs

The IrDA Standard is a highly popular, inexpensive method for providing wireless point-to-point communication. This free stack coupled with Microchip's 16-bit microcontrollers and DSCs, with their built-in IrDA standard support, provide an inexpensive wireless connection with plenty of computing power left for other tasks.

Embedded Control Libraries

Encryption Libraries

plement reliable secure applications using the Symmetric and Asymmetric Key Embedded Encryption Libraries. These libraries are both proven and optimized. Library functions can be easily called by your C or assembly code. These libraries and the 256-bit key AES and Triple-DES Libraries are available for a production license fee of \$5.00 from microchipDIRECT.

File System for PIC18, PIC24, PIC32 MCUs and dsPIC® DSCs

Microchip's memory disk drive file system interface library brings the ability to transfer and share portable memory devices between an embedded system and a personal computer. Most SD cards, CF cards and MMCs MultiMedia Cards, particularly those sized below 2 gigabytes (GB), use the FAT16 standard. The FAT32 standard can be used to address memory sized between 2 GB and 2 terabytes (TB). This library with complimentary application note (AN1045) provides a method to read and/or write to these storage devices through a microcontroller. The data of these storage devices can be read by a PC, and the data written by a PC can be read by a microcontroller. Most operating systems (i.e., Windows® XP) support the FAT16 and FAT32 file systems.

Graphics Library for PIC24 & PIC32 MCUs and dsPIC DSCs

The Microchip Graphics Library is highly modular and is optimized for Microchip's 16- and 32-bit microcontrollers. The software package includes: full source code, schematics, drivers, documentation and utilities. Graphics Library supports:

- Up to 800x480 (WVGA) resolution
- Up to 16-bit or 65K colors
- 2D and 3D Objects
- Image and Animation
- Resistive touch screen and keypad
- Foreign fonts

mTouch™ Sensing Technology Source Code and Demos

Microchip's mTouch Sensing solutions provide a free and easy method for designers to add capacitive touch sensing to applications utilizing PIC® microcontrollers without the cost of fee-based licensing and royalty agreements. Being a source-code solution further helps engineers quickly integrate touch sensing functionality with their existing application code in a single, standard microcontroller, thus reducing the total system cost associated with current designs.

Methods and Modules Ready to Use

Methods

Emulating Data EEPROM for PIC18 and PIC24 MCUs, dsPIC DSCs and PIC32

For devices that do not have on-chip EEPROM, emulating EEPROM with on-chip Flash memory may be an important option. This application note presents an interface similar to an internal data EEPROM, but uses available on-chip Flash memory to improve endurance by a factor as high as 500. (Application Note: AN1095)

Achieving Higher ADC Resolution Using Oversampling

This application note describes oversampling as a method to add additional bits of accuracy to the 12-bit ADC conversion in a dsPIC DSC. (Application Note: AN1152)

Bootloader for PIC24 MCUs and dsPIC DSCs

This application note describes a UART-based bootloader for all 16-bit MCU and DSC families. (Application Note: AN1094)

A Serial Bootloader for PIC24F Devices

This application note describes a UART-based bootloader and includes Microchip's PIC24F Quick Programmer (P24QP) Windows-based graphical programming interface. (Application Note: AN1157)

Implementing Digital Lock-In Amplifiers Using the dsPIC® DSC

Conventionally, lock-in amplifiers use complicated (and expensive) analog circuitry to perform the phase sensitive detection and filtering. However, modern Digital Signal Controllers (DSCs), such as the dsPIC30F and dsPIC33F families, can be used to remove large amounts of the analog circuitry by performing the necessary operations in software. This capability provides a number of additional benefits including increased reliability, resistance to temperature and aging effects, and the ease with which the system can be modified in the field. (Application Note: AN1115)

Low Power Design Guide

This document seeks to simplify the transition to low-power applications by providing a single location for the foundations of low-power design for embedded systems. The examples discussed in this document will focus on power consumption from the viewpoint of the microcontroller (MCU). (Application Note: AN1416)

Modules

Cyclic Redundancy Code (CRC) Module

CRC is one of the most versatile error checking algorithms used in various digital communication systems. This application note illustrates how to use the hardware CRC module on selected 16-bit MCUs and DSCs. Users can program any user-defined generator polynomial into this module for CRC computation. (Application Note: AN1148)

MATLAB Device Blocks for MPLAB IDE

The Microchip Device Blocksets for MATLAB Simulink provide a set of interface-compliant configuration and run-time peripheral blocks for the dsPIC30 and dsPIC33 DSCs. Complete applications can be created in the form of a MATLAB/SIMULINK model using blocksets provided by Microchip and Simulink. C code for the application will be generated. These blocksets are compatible with the MATLAB plug-in available in MPLAB IDE. Also provided are many examples in the form of demo models, including a complete BLDC motor control application.

Power Conversion and Motor Control Application Software

Application Type	Application Solution	AN Number	Description
Brushless DC Motor Control	Sensored BLDC Motor Control	AN957	This application note describes a fully-tested 3-phase BLDC motor control algorithm with 3 Hall-effect sensors.
	Sensorless BLDC Motor Control Using the dsPIC30F of dsPIC33F	AN901	This application note describes how to provide sensorless BLDC motor control with the dsPIC DSC device.
	Sensorless BLDC Control with Back-EMF Filtering Using a Majority Function	AN1160	This application note describes a sensorless Brushless Direct Current (BLDC) motor control algorithm, implemented using the dsPIC® Digital Signal Controller (DSC).The algorithm works by the use of a majority function for digitally filtering the Back-Electromotive Force (BEMF). Each phase of the motor is filtered to determine when to commutate the motor drive voltages.
AC Induction Motor Control	Vector Control of an ACIM Using Optical Encoder	AN908	This application note describes a fully-tested vector, or field oriented, control algorithm for a 3-phase ACIM. The motor currents, torque and velocity are regulated in control loops.
	Introduction to ACIM Control	AN984	This application note describes volts per hertz control of an AC Induction Motor.
	Sensorless Field Oriented Control (FOC) of an AC Induction Motor (ACIM)	AN1162	This application note presents a solution for sensorless Field Oriented Control (FOC) of induction motors using a dsPIC® Digital Signal Controller (DSC). The benefits of field oriented control can be directly realized as lower energy consumption, higher efficiency, lower operating costs and reduced cost of drive components.
	Sensorless Field Oriented Control (FOC) of an AC Induction Motor (ACIM) Using Field Weakening	AN1206	This application note presents one solution for sensorless Field Oriented Control (FOC) with Field Weakening (FW) of induction motors using a dsPIC Digital Signal Controller (DSC).
Permanent Magnet Synchronous Motor Control	Sinusoidal PMSM Motor Control	AN1017	This application note provides a fully working and highly flexible solution for using the dsPIC DSC to control a permanent magnet synchronous motor using three hall sensors with sinusoidal voltages.
	Sensorless Field-Oriented Control for PMSM Motors with Field Weakening Using Slide Mode Controller	AN1078	This application note describes how to apply a dsPIC DSC to control a permanent magnet synchronous motor using the field oriented control algorithm. Shunt resistors are used to estimate rotor position.
	Sensorless Field Oriented Control (FOC) of an AC Induction Motor (ACIM) Using Field Weakening	AN1206	This application note presents one solution for sensorless Field Oriented Control (FOC) with Field Weakening (FW) of induction motors using a dsPIC Digital Signal Controller (DSC).
	Sensorless Field Oriented Control (FOC) for a Permanent Magnet Synchronous Motor (PMSM) Using a PLL Estimator and Field Weakening (FW)	AN1292	This application note describes the sensorless FOC algorithm for PMSM motor using a Phase Locked Loop (PLL) position and speed estimators.
	Integrated Power Factor Correction (PFC) and Sensorless Field Oriented Control (FOC) System	AN1208	This application note describes the process of integrating two complex applications: PFC and Sensorless FOC. These applications are implemented on a Permanent Magnet Synchronous Motor (PMSM). In addition, this application note also describes the integration of the algorithms, lists the necessary hardware requirements, and provides the guidelines to optimize the development procedure.
	Single-Shunt Three-Phase Current Reconstruction Algorithm for Sensorless FOC of a PMSM	AN1299	This dsPIC33F application note describes a motor control technique where a single-shunt resistor circuit is used to measure the motor phase current.
Stepper Motor Control	Stepper Motor Control with dsPIC DSCs	AN1307	This application note describes how to drive a stepper motor with a dsPIC33F motor control family DSC.
SMPS/ Digital Power	Switch Mode Power Supply (SMPS) Topologies (Part I)	AN1114	This application note explains the basics of different types of SMPS topologies and their applications. The pros and cons of different SMPS topologies are also explained to guide the user to select an appropriate topology for a given application, while providing useful information regarding selection of components for a given SMPS design.
	Switch Mode Power Supply (SMPS) Topologies (Part II)	AN1207	This application note is the second of a two-part series on Switch Mode Power Supply (SMPS) topologies. This series expands on the previous material in Part I, and presents the basic tools needed to design a power converter.
	Offline UPS Reference Design	AN1279	The application note describes the design of an Offline Uninterruptible Power Supply (UPS) using a Switch Mode Power Supply (SMPS) dsPIC Digital Signal Controller (DSC).
	Digital Power Interleaved PFC Reference Design	AN1278	The application note describes the design of a Digital Power Interleaved PFC (IPFC) using a Switch Mode Power Supply (SMPS) dsPIC Digital Signal Controller (DSC).
	Quarter Brick DC-DC Reference Design	AN1335	This application note describes the design of Quarter Brick DC-DC Reference Design using Switch Mode Power Supply (SMPS) dsPIC Digital Signal Controller(DSC)
	DC-DC LLC Resonant Converter Reference Design	AN1336	This application note describes the design of DC-DC LLC Resonant Converter Reference Design using Switch Mode Power Supply (SMPS) dsPIC Digital Signal Controller(DSC)
	Grid Connected Solar Microinverter	AN1338	This application note describes the design of Grid Connected Solar Microinverter Reference Design using Switch Mode Power Supply (SMPS) dsPIC Digital Signal Controller(DSC)
Class B Software	Class B Safety Software Library for PIC MCUs and dsPIC DSCs	AN1229	This application note describes the Class B Safety Software Library routines that detect the occurrence of Faults in a single channel CPU. These routines have been developed in accordance with the IEC 60730 standard to support the Class B certification process.

Motor Control Tuning Guides

Tuning guides describe the procedure and setup necessary for tuning the Motor control algorithms; they simplify motor control design and optimize solutions.

Description	Tuning Guide
Sensorless Dual-Shunt FOC with SMO estimator BLDC/PMSM	AN1078 Tuning Guide
Sensorless Dual-Shunt FOC with PLL estimator BLDC/PMSM	AN1292 Tuning Guide
Sensorless Single-Shunt FOC with SMO estimator BLDC/PMSM	AN1299 Tuning Guide
Sensorless BLDC Control with Back-EMF Filtering Using a Majority Function	AN1160 Tuning Guide
Stepper Motor Control	AN1307 Tuning Guide

Resources for Self-paced Learning

Web Seminars

Microchip offers extensive online resources for designers ranging from downloadable documentation to web seminars (webinars) to online discussion groups. All of these helpful resources are accessible at www.microchip.com/webseminars and are updated frequently with the most current information on our products and services.

For more information about additional self-paced learning resources, please visit www.microchip.com/training

Plug-in Modules Supporting Explorer 16 Development and Other Development Boards

A Plug-in Module (PIM) is a daughter board with a PIC® MCU or dsPIC® DSC soldered on top and header socket strips on the bottom. This method allows for easy swapping of devices onto the various development boards, without having to unsolder and resolder parts. For a complete listing of available PIMs please go to www.microchip.com/explorer16.

Support

Microchip is committed to supporting its customers in developing products faster and more efficiently. We maintain a worldwide network of field applications engineers and technical support ready to provide product and system assistance. In addition, the following service areas are available at www.microchip.com:

- **Support** link provides a way to get questions answered fast: <http://support.microchip.com>
- **Sample** link offers evaluation samples of any Microchip device: <http://sample.microchip.com>
- **Forum** link provides access to knowledge base and peer help: <http://forum.microchip.com>
- **Buy** link provides locations of Microchip Sales Channel Partners: www.microchip.com/sales
