

# LPC1110/11/12/13/14/15

32-bit ARM Cortex-M0 microcontroller; up to 64 kB flash and 8 kB SRAM

Rev. 8 — 20 February 2013

Product data sheet

## 1. General description

The LPC1110/11/12/13/14/15 are a ARM Cortex-M0 based, low-cost 32-bit MCU family, designed for 8/16-bit microcontroller applications, offering performance, low power, simple instruction set and memory addressing together with reduced code size compared to existing 8/16-bit architectures.

The LPC1110/11/12/13/14/15 operate at CPU frequencies of up to 50 MHz.

The peripheral complement of the LPC1110/11/12/13/14/15 includes up to 64 kB of flash memory, up to 8 kB of data memory, one Fast-mode Plus I<sup>2</sup>C-bus interface, one RS-485/EIA-485 UART, up to two SPI interfaces with SSP features, four general purpose counter/timers, a 10-bit ADC, and up to 42 general purpose I/O pins.

**Remark:** The LPC111x series consists of the LPC1100 series (parts LPC111x/101/201/301), LPC1100L series (parts LPC111x/002/102/202/302), and the LPC1100XL series (parts LPC111x/103/203/303/323/333). The LPC1100L and LPC1100XL series include the power profiles, a windowed watchdog timer, and a configurable open-drain mode.

## 2. Features and benefits

- System:
  - ◆ ARM Cortex-M0 processor, running at frequencies of up to 50 MHz.
  - ◆ ARM Cortex-M0 built-in Nested Vectored Interrupt Controller (NVIC).
  - ◆ Non-Maskable Interrupt (NMI) input selectable from several input sources (LPC1100XL series only).
  - ◆ Serial Wire Debug.
  - ◆ System tick timer.
- Memory:
  - ◆ 64 kB (LPC1115), 56 kB (LPC1114/333), 48 kB (LPC1114/323), 32 kB (LPC1114/102/201/202/203/301/302/303), 24 kB (LPC1113), 16 kB (LPC1112), 8 kB (LPC1111), or 4 kB (LPC1110) on-chip flash programming memory.
  - ◆ 256 byte page erase function (LPC1100XL series only)
  - ◆ 8 kB, 4 kB, 2 kB, or 1 kB SRAM.
  - ◆ In-System Programming (ISP) and In-Application Programming (IAP) via on-chip bootloader software.
- Digital peripherals:
  - ◆ Up to 42 General Purpose I/O (GPIO) pins with configurable pull-up/pull-down resistors. In addition, a configurable open-drain mode is supported on the LPC1100L and LPC1100XL series.

- ◆ GPIO pins can be used as edge and level sensitive interrupt sources.
- ◆ High-current output driver (20 mA) on one pin.
- ◆ High-current sink drivers (20 mA) on two I<sup>2</sup>C-bus pins in Fast-mode Plus (not on LPC1112FDH20/102).
- ◆ Four general purpose counter/timers with up to eight capture inputs and up to 13 match outputs.
- ◆ Programmable WatchDog Timer (WDT) the LPC1100 series only.
- ◆ Programmable windowed WDT on the LPC1100L and LPC1100XL series only.
- Analog peripherals:
  - ◆ 10-bit ADC with input multiplexing among 5, 6, or 8 pins depending on package size.
- Serial interfaces:
  - ◆ UART with fractional baud rate generation, internal FIFO, and RS-485 support.
  - ◆ Two SPI controllers with SSP features and with FIFO and multi-protocol capabilities (second SPI on LPC1100 and LPC1100L series LQFP48 package only).
  - ◆ I<sup>2</sup>C-bus interface supporting full I<sup>2</sup>C-bus specification and Fast-mode Plus with a data rate of 1 Mbit/s with multiple address recognition and monitor mode (not on LPC1112FDH20/102).
- Clock generation:
  - ◆ 12 MHz internal RC oscillator trimmed to 1 % accuracy that can optionally be used as a system clock.
  - ◆ Crystal oscillator with an operating range of 1 MHz to 25 MHz.
  - ◆ Programmable watchdog oscillator with a frequency range of 9.4 kHz to 2.3 MHz.
  - ◆ PLL allows CPU operation up to the maximum CPU rate without the need for a high-frequency crystal. May be run from the system oscillator or the internal RC oscillator.
  - ◆ Clock output function with divider that can reflect the system oscillator clock, IRC clock, CPU clock, and the Watchdog clock.
- Power control:
  - ◆ Integrated PMU (Power Management Unit) to minimize power consumption during Sleep, Deep-sleep, and Deep power-down modes.
  - ◆ Power profiles residing in boot ROM allowing to optimize performance and minimize power consumption for any given application through one simple function call. (LPC1100L and LPC1100XL series only.)
  - ◆ Three reduced power modes: Sleep, Deep-sleep, and Deep power-down.
  - ◆ Processor wake-up from Deep-sleep mode via a dedicated start logic using up to 13 of the functional pins.
  - ◆ Power-On Reset (POR).
  - ◆ Brownout detect with up to four separate thresholds for interrupt and forced reset.
- Unique device serial number for identification.
- Single power supply (1.8 V to 3.6 V).
- Available as LQFP48 package and HVQFN33 package.
- LPC1100L series available as TSSOP28 package, DIP28 package, TSSOP20 package, and SO20 package.

### 3. Applications

- eMetering
- Alarm systems
- Lighting
- White goods

### 4. Ordering information

Table 1. Ordering information

Type number	Package		Version
	Name	Description	
<b>SO20, TSSOP20, TSSOP28, and DIP28 packages</b>			
LPC1110FD20 <sup>[1]</sup>	SO20	SO20: plastic small outline package; 20 leads; body width 7.5 mm	SOT163-1
LPC1111FDH20/002 <sup>[1]</sup>	TSSOP20	TSSOP20: plastic thin shrink small outline package; 20 leads; body width 4.4 mm	SOT360-1
LPC1112FD20/102 <sup>[1]</sup>	SO20	SO20: plastic small outline package; 20 leads; body width 7.5 mm	SOT163-1
LPC1112FDH20/102	TSSOP20	TSSOP20: plastic thin shrink small outline package; 20 leads; body width 4.4 mm	SOT360-1
LPC1112FDH28/102	TSSOP28	TSSOP28: plastic thin shrink small outline package; 28 leads; body width 4.4 mm	SOT361-1
LPC1114FDH28/102	TSSOP28	TSSOP28: plastic thin shrink small outline package; 28 leads; body width 4.4 mm	SOT361-1
LPC1114FN28/102	DIP28	DIP28: plastic dual in-line package; 28 leads (600 mil)	SOT117-1
<b>HVQFN24/33 and LQFP48 packages</b>			
LPC1111FHN33/101	HVQFN33	HVQFN: plastic thermal enhanced very thin quad flat package; no leads; 33 terminals; body 7 × 7 × 0.85 mm	n/a
LPC1111FHN33/102	HVQFN33	HVQFN: plastic thermal enhanced very thin quad flat package; no leads; 33 terminals; body 7 × 7 × 0.85 mm	n/a
LPC1111FHN33/201	HVQFN33	HVQFN: plastic thermal enhanced very thin quad flat package; no leads; 33 terminals; body 7 × 7 × 0.85 mm	n/a
LPC1111FHN33/202	HVQFN33	HVQFN: plastic thermal enhanced very thin quad flat package; no leads; 33 terminals; body 7 × 7 × 0.85 mm	n/a
LPC1111FHN33/103	HVQFN33	HVQFN: plastic thermal enhanced very thin quad flat package; no leads; 33 terminals; body 7 × 7 × 0.85 mm	n/a

Table 4. LPC1100L series: LPC1110/11/12 pin description table (SO20 and TSSOP20 package with I<sup>2</sup>C-bus pins)

Symbol	Pin SO20/ TSSOP20	Start logic input	Type	Reset state <a href="#">[1]</a>	Description
PIO0_0 to PIO0_11			I/O		<b>Port 0</b> — Port 0 is a 12-bit I/O port with individual direction and function controls for each bit. The operation of port 0 pins depends on the function selected through the IOCONFIG register block.
RESET/PIO0_0	17	<a href="#">[2]</a> yes	I	I; PU	<b>RESET</b> — External reset input with 20 ns glitch filter. A LOW-going pulse as short as 50 ns on this pin resets the device, causing I/O ports and peripherals to take on their default states, and processor execution to begin at address 0.
			I/O	-	<b>PIO0_0</b> — General purpose digital input/output pin with 10 ns glitch filter.
PIO0_1/CLKOUT/ CT32B0_MAT2	18	<a href="#">[3]</a> yes	I/O	I; PU	<b>PIO0_1</b> — General purpose digital input/output pin. A LOW level on this pin during reset starts the ISP command handler.
			O	-	<b>CLKOUT</b> — Clockout pin.
			O	-	<b>CT32B0_MAT2</b> — Match output 2 for 32-bit timer 0.
PIO0_2/SSEL0/ CT16B0_CAP0	19	<a href="#">[3]</a> yes	I/O	I; PU	<b>PIO0_2</b> — General purpose digital input/output pin.
			I/O	-	<b>SSEL0</b> — Slave Select for SPI0.
			I	-	<b>CT16B0_CAP0</b> — Capture input 0 for 16-bit timer 0.
PIO0_4/SCL	20	<a href="#">[4]</a> yes	I/O	I; IA	<b>PIO0_4</b> — General purpose digital input/output pin (open-drain).
			I/O	-	<b>SCL</b> — I <sup>2</sup> C-bus, open-drain clock input/output. High-current sink only if I <sup>2</sup> C Fast-mode Plus is selected in the I/O configuration register.
PIO0_5/SDA	5	<a href="#">[4]</a> yes	I/O	I; IA	<b>PIO0_5</b> — General purpose digital input/output pin (open-drain).
			I/O	-	<b>SDA</b> — I <sup>2</sup> C-bus, open-drain data input/output. High-current sink only if I <sup>2</sup> C Fast-mode Plus is selected in the I/O configuration register.
PIO0_6/SCK0	6	<a href="#">[3]</a> yes	I/O	I; PU	<b>PIO0_6</b> — General purpose digital input/output pin.
			I/O	-	<b>SCK0</b> — Serial clock for SPI0.
PIO0_8/MISO0/ CT16B0_MAT0	1	<a href="#">[3]</a> yes	I/O	I; PU	<b>PIO0_8</b> — General purpose digital input/output pin.
			I/O	-	<b>MISO0</b> — Master In Slave Out for SPI0.
			O	-	<b>CT16B0_MAT0</b> — Match output 0 for 16-bit timer 0.
PIO0_9/MOSI0/ CT16B0_MAT1	2	<a href="#">[3]</a> yes	I/O	I; PU	<b>PIO0_9</b> — General purpose digital input/output pin.
			I/O	-	<b>MOSI0</b> — Master Out Slave In for SPI0.
			O	-	<b>CT16B0_MAT1</b> — Match output 1 for 16-bit timer 0.
SWCLK/PIO0_10/ SCK0/ CT16B0_MAT2	3	<a href="#">[3]</a> yes	I	I; PU	<b>SWCLK</b> — Serial wire clock.
			I/O	-	<b>PIO0_10</b> — General purpose digital input/output pin.
			I/O	-	<b>SCK0</b> — Serial clock for SPI0.
			O	-	<b>CT16B0_MAT2</b> — Match output 2 for 16-bit timer 0.

			I	-	<b>AD2</b> — A/D converter, input 2.
			O	-	<b>CT32B1_MAT0</b> — Match output 0 for 32-bit timer 1.
R/PIO1_2/ AD3/CT32B1_MAT1	9	<a href="#">[5]</a> no	I	I; PU	R — Reserved. Configure for an alternate function in the IOCONFIG block.
			I/O	-	<b>PIO1_2</b> — General purpose digital input/output pin.
			I	-	<b>AD3</b> — A/D converter, input 3.
			O	-	<b>CT32B1_MAT1</b> — Match output 1 for 32-bit timer 1.
SWDIO/PIO1_3/ AD4/CT32B1_MAT2	10	<a href="#">[5]</a> no	I/O	I; PU	<b>SWDIO</b> — Serial wire debug input/output.
			I/O	-	<b>PIO1_3</b> — General purpose digital input/output pin.
			I	-	<b>AD4</b> — A/D converter, input 4.
			O	-	<b>CT32B1_MAT2</b> — Match output 2 for 32-bit timer 1.
PIO1_6/RXD/ CT32B0_MAT0	11	<a href="#">[3]</a> no	I/O	I; PU	<b>PIO1_6</b> — General purpose digital input/output pin.
			I	-	<b>RXD</b> — Receiver input for UART.
			O	-	<b>CT32B0_MAT0</b> — Match output 0 for 32-bit timer 0.
PIO1_7/TXD/ CT32B0_MAT1	12	<a href="#">[3]</a> no	I/O	I; PU	<b>PIO1_7</b> — General purpose digital input/output pin.
			O	-	<b>TXD</b> — Transmitter output for UART.
			O	-	<b>CT32B0_MAT1</b> — Match output 1 for 32-bit timer 0.
V <sub>DD</sub>	15	-	-	-	3.3 V supply voltage to the internal regulator, the external rail, and the ADC. Also used as the ADC reference voltage.
XTALIN	14	<a href="#">[6]</a> -	I	-	Input to the oscillator circuit and internal clock generator circuits. Input voltage must not exceed 1.8 V.
XTALOUT	13	<a href="#">[6]</a> -	O	-	Output from the oscillator amplifier.
V <sub>SS</sub>	16	-	-	-	Ground.

- [1] Pin state at reset for default function: I = Input; O = Output; PU = internal pull-up enabled (pins pulled up to full V<sub>DD</sub> level ); IA = inactive, no pull-up/down enabled.
- [2] See [Figure 48](#) for the reset pad configuration.  $\overline{\text{RESET}}$  functionality is not available in Deep power-down mode. Use the WAKEUP pin to reset the chip and wake up from Deep power-down mode. An external pull-up resistor is required on this pin for the Deep power-down mode.
- [3] 5 V tolerant pad providing digital I/O functions with configurable pull-up/pull-down resistors and configurable hysteresis (see [Figure 47](#)).
- [4] I<sup>2</sup>C-bus pads compliant with the I<sup>2</sup>C-bus specification for I<sup>2</sup>C standard mode and I<sup>2</sup>C Fast-mode Plus.
- [5] 5 V tolerant pad providing digital I/O functions with configurable pull-up/pull-down resistors, configurable hysteresis, and analog input. When configured as a ADC input, digital section of the pad is disabled and the pin is not 5 V tolerant (see [Figure 47](#)).
- [6] When the system oscillator is not used, connect XTALIN and XTALOUT as follows: XTALIN can be left floating or can be grounded (grounding is preferred to reduce susceptibility to noise). XTALOUT should be left floating.

			I	-	<b>WAKEUP</b> — Deep power-down mode wake-up pin with 20 ns glitch filter. This pin must be pulled HIGH externally to enter Deep power-down mode and pulled LOW to exit Deep power-down mode. A LOW-going pulse as short as 50 ns wakes up the part.
PIO1_6/RXD/ CT32B0_MAT0	23 <sup>[3]</sup>	no	I/O	I; PU	<b>PIO1_6</b> — General purpose digital input/output pin.
			I	-	<b>RXD</b> — Receiver input for UART.
			O	-	<b>CT32B0_MAT0</b> — Match output 0 for 32-bit timer 0.
PIO1_7/TXD/ CT32B0_MAT1	24 <sup>[3]</sup>	no	I/O	I; PU	<b>PIO1_7</b> — General purpose digital input/output pin.
			O	-	<b>TXD</b> — Transmitter output for UART.
			O	-	<b>CT32B0_MAT1</b> — Match output 1 for 32-bit timer 0.
PIO1_8/ CT16B1_CAP0	6 <sup>[3]</sup>	no	I/O	I; PU	<b>PIO1_8</b> — General purpose digital input/output pin.
			I	-	<b>CT16B1_CAP0</b> — Capture input 0 for 16-bit timer 1.
XTALIN	4 <sup>[6]</sup>	-	I	-	Input to the oscillator circuit and internal clock generator circuits. Input voltage must not exceed 1.8 V.
V <sub>DD</sub>	5; 22	-	I	-	1.8 V supply voltage to the internal regulator, the external rail, and the ADC. Also used as the ADC reference voltage.
V <sub>SS</sub>	3; 21	-	I	-	Ground.

[1] Pin state at reset for default function: I = Input; O = Output; PU = internal pull-up enabled (pins pulled up to full V<sub>DD</sub> level); IA = inactive, no pull-up/down enabled.

[2] See [Figure 48](#) for the reset pad configuration.  $\overline{\text{RESET}}$  functionality is not available in Deep power-down mode. Use the WAKEUP pin to reset the chip and wake up from Deep power-down mode. An external pull-up resistor is required on this pin for the Deep power-down mode.

[3] Pad providing digital I/O functions with configurable pull-up/pull-down resistors and configurable hysteresis (see [Figure 47](#)).

[4] I<sup>2</sup>C-bus pads compliant with the I<sup>2</sup>C-bus specification for I<sup>2</sup>C standard mode and I<sup>2</sup>C Fast-mode Plus.

[5] Pad providing digital I/O functions with configurable pull-up/pull-down resistors, configurable hysteresis, and analog input. When configured as a ADC input, digital section of the pad is disabled (see [Figure 47](#)).

[6] When the system oscillator is not used, connect XTALIN and XTALOUT as follows: XTALIN can be left floating or can be grounded (grounding is preferred to reduce susceptibility to noise). XTALOUT should be left floating.

			I	-	$\overline{\text{DSR}}$ — Data Set Ready input for UART.
PIO3_2/ $\overline{\text{DCD}}$	43 <sup>[3]</sup>	no	I/O	I; PU	<b>PIO3_2</b> — General purpose digital input/output pin.
			I	-	$\overline{\text{DCD}}$ — Data Carrier Detect input for UART.
PIO3_3/ $\overline{\text{RI}}$	48 <sup>[3]</sup>	no	I/O	I; PU	<b>PIO3_3</b> — General purpose digital input/output pin.
			I	-	$\overline{\text{RI}}$ — Ring Indicator input for UART.
PIO3_4	18 <sup>[3]</sup>	no	I/O	I; PU	<b>PIO3_4</b> — General purpose digital input/output pin.
PIO3_5	21 <sup>[3]</sup>	no	I/O	I; PU	<b>PIO3_5</b> — General purpose digital input/output pin.
V <sub>DD</sub>	8; 44	-	I	-	3.3 V supply voltage to the internal regulator, the external rail, and the ADC. Also used as the ADC reference voltage.
XTALIN	6 <sup>[6]</sup>	-	I	-	Input to the oscillator circuit and internal clock generator circuits. Input voltage must not exceed 1.8 V.
XTALOUT	7 <sup>[6]</sup>	-	O	-	Output from the oscillator amplifier.
V <sub>SS</sub>	5; 41	-	I	-	Ground.

- [1] Pin state at reset for default function: I = Input; O = Output; PU = internal pull-up enabled (pins pulled up to 2.6 V for LPC111x/101/201/301, pins pulled up to full V<sub>DD</sub> level on LPC111x/002/102/202/302 (V<sub>DD</sub> = 3.3 V)); IA = inactive, no pull-up/down enabled.
- [2] See [Figure 48](#) for the reset pad configuration.  $\overline{\text{RESET}}$  functionality is not available in Deep power-down mode. Use the WAKEUP pin to reset the chip and wake up from Deep power-down mode. An external pull-up resistor is required on this pin for the Deep power-down mode.
- [3] 5 V tolerant pad providing digital I/O functions with configurable pull-up/pull-down resistors and configurable hysteresis (see [Figure 47](#)).
- [4] I<sup>2</sup>C-bus pads compliant with the I<sup>2</sup>C-bus specification for I<sup>2</sup>C standard mode and I<sup>2</sup>C Fast-mode Plus.
- [5] 5 V tolerant pad providing digital I/O functions with configurable pull-up/pull-down resistors, configurable hysteresis, and analog input. When configured as a ADC input, digital section of the pad is disabled and the pin is not 5 V tolerant (see [Figure 47](#)).
- [6] When the system oscillator is not used, connect XTALIN and XTALOUT as follows: XTALIN can be left floating or can be grounded (grounding is preferred to reduce susceptibility to noise). XTALOUT should be left floating.

Table 9. LPC1100 and LPC1100L series: LPC1111/12/13/14 pin description table (HVQFN33 package)

Symbol	Pin	Start logic input	Type	Reset state [1]	Description
PIO0_0 to PIO0_11					<b>Port 0</b> — Port 0 is a 12-bit I/O port with individual direction and function controls for each bit. The operation of port 0 pins depends on the function selected through the IOCONFIG register block.
$\overline{\text{RESET}}$ /PIO0_0	2 <sup>[2]</sup>	yes	I	I;PU	$\overline{\text{RESET}}$ — External reset input with 20 ns glitch filter. A LOW-going pulse as short as 50 ns on this pin resets the device, causing I/O ports and peripherals to take on their default states and processor execution to begin at address 0.
			I/O	-	<b>PIO0_0</b> — General purpose digital input/output pin with 10 ns glitch filter.

## 7. Functional description

---

### 7.1 ARM Cortex-M0 processor

The ARM Cortex-M0 is a general purpose, 32-bit microprocessor, which offers high performance and very low power consumption.

### 7.2 On-chip flash program memory

The LPC1110/11/12/13/14/15 contain 64 kB (LPC1115), 56 kB (LPC1114/333), 48 kB (LPC1114/323), 32 kB (LPC1114), 24 kB (LPC1113), 16 kB (LPC1112), 8 kB (LPC1111) or 4 kB (LPC1110) of on-chip flash memory.

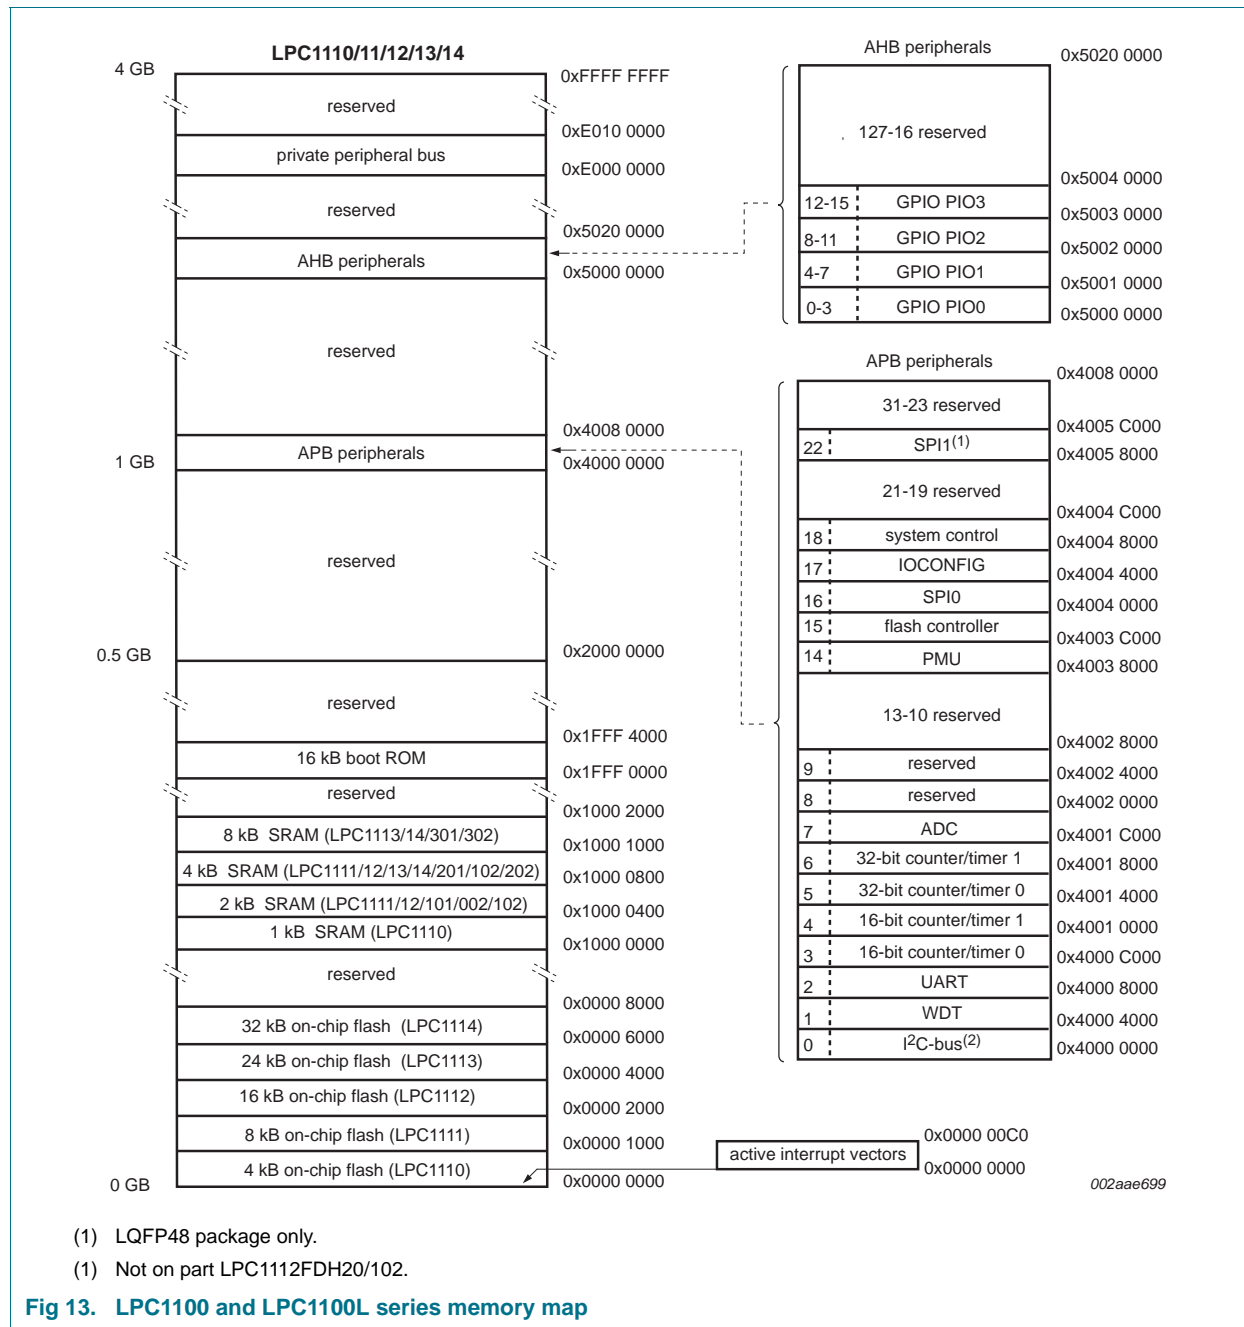

### 7.3 On-chip SRAM

The LPC1110/11/12/13/14/15 contain a total of 8 kB, 4 kB, 2 kB, or 1 kB on-chip static RAM memory.

### 7.4 Memory map

The LPC1110/11/12/13/14/15 incorporate several distinct memory regions, shown in the following figures. [Figure 13](#) shows the overall map of the entire address space from the user program viewpoint following reset. The interrupt vector area supports address remapping.

The AHB peripheral area is 2 MB in size, and is divided to allow for up to 128 peripherals. The APB peripheral area is 512 kB in size and is divided to allow for up to 32 peripherals. Each peripheral of either type is allocated 16 kB of space. This allows simplifying the address decoding for each peripheral.

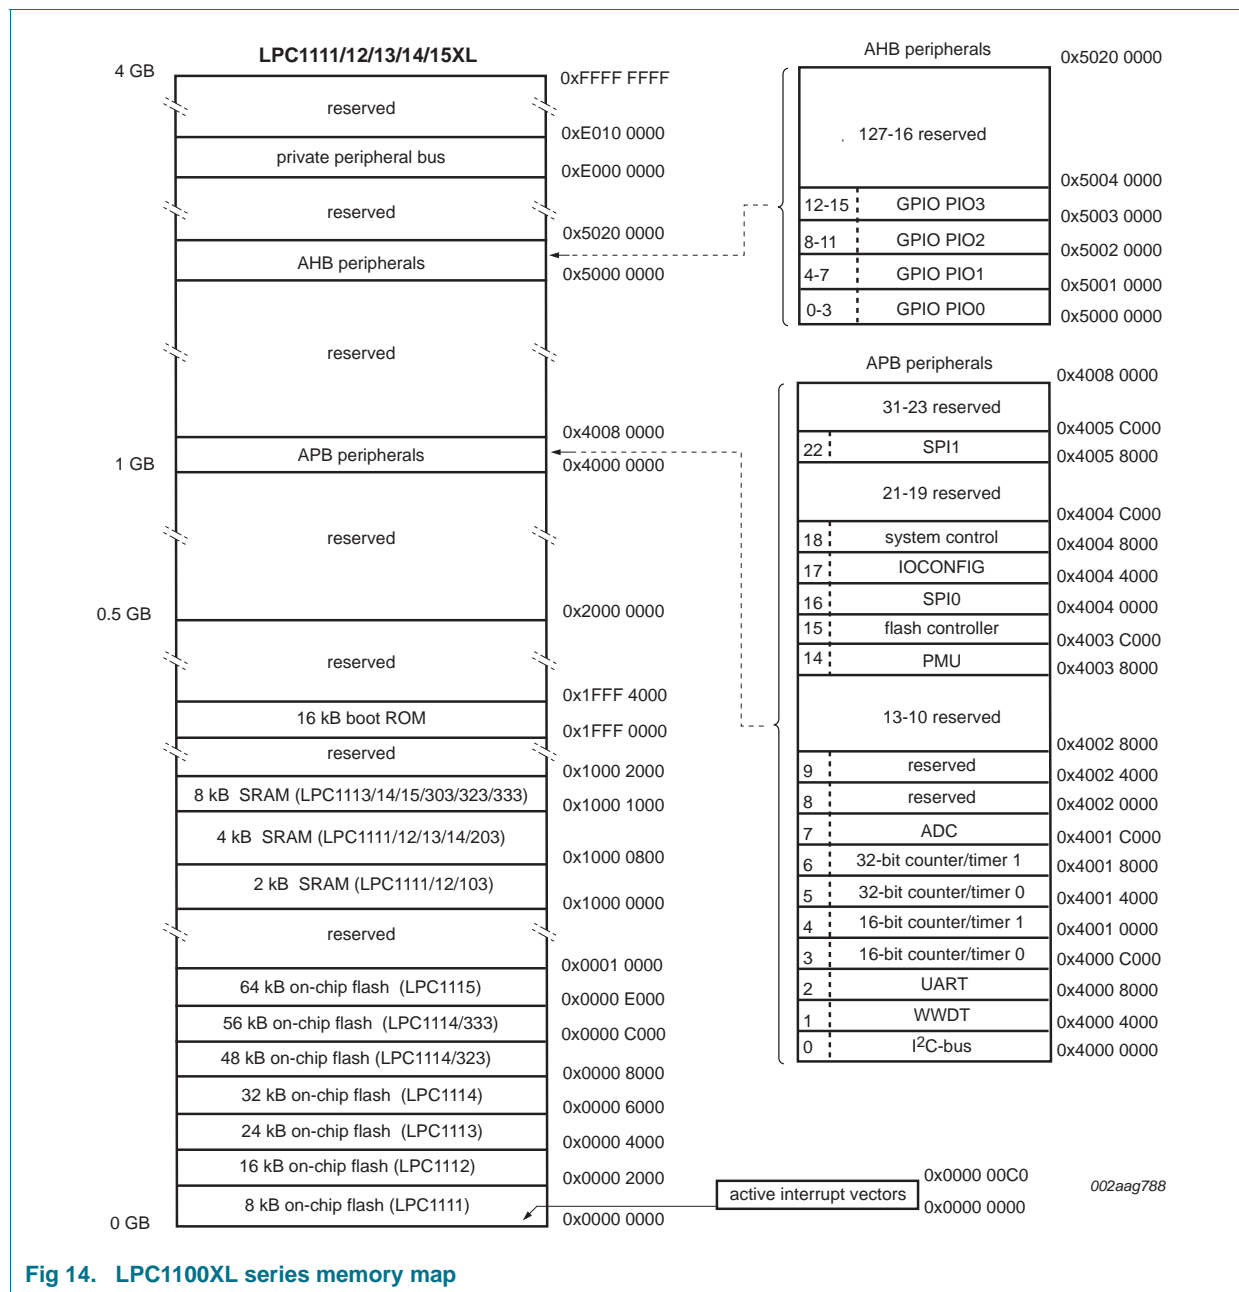

Fig 14. LPC1100XL series memory map

## 7.5 Nested Vectored Interrupt Controller (NVIC)

The Nested Vectored Interrupt Controller (NVIC) is an integral part of the Cortex-M0. The tight coupling to the CPU allows for low interrupt latency and efficient processing of late arriving interrupts.

### 7.5.1 Features

- Controls system exceptions and peripheral interrupts.

- In the LPC1110/11/12/13/14/15, the NVIC supports 32 vectored interrupts including up to 13 inputs to the start logic from individual GPIO pins.
- Four programmable interrupt priority levels with hardware priority level masking.
- Software interrupt generation.

### 7.5.2 Interrupt sources

Each peripheral device has one interrupt line connected to the NVIC but may have several interrupt flags. Individual interrupt flags may also represent more than one interrupt source.

Any GPIO pin (total of up to 42 pins) regardless of the selected function, can be programmed to generate an interrupt on a level, or rising edge or falling edge, or both.

## 7.6 IOCONFIG block

The IOCONFIG block allows selected pins of the microcontroller to have more than one function. Configuration registers control the multiplexers to allow connection between the pin and the on-chip peripherals.

Peripherals should be connected to the appropriate pins prior to being activated and prior to any related interrupt(s) being enabled. Activity of any enabled peripheral function that is not mapped to a related pin should be considered undefined.

## 7.7 Fast general purpose parallel I/O

Device pins that are not connected to a specific peripheral function are controlled by the GPIO registers. Pins may be dynamically configured as inputs or outputs. Multiple outputs can be set or cleared in one write operation.

LPC1110/11/12/13/14/15 use accelerated GPIO functions:

- GPIO registers are a dedicated AHB peripheral so that the fastest possible I/O timing can be achieved.
- Entire port value can be written in one instruction.

Additionally, any GPIO pin (total of up to 42 pins) providing a digital function can be programmed to generate an interrupt on a level, a rising or falling edge, or both.

### 7.7.1 Features

- Bit level port registers allow a single instruction to set or clear any number of bits in one write operation.
- Direction control of individual bits.
- All I/O default to inputs with pull-ups enabled after reset with the exception of the I<sup>2</sup>C-bus pins PIO0\_4 and PIO0\_5.
- Pull-up/pull-down resistor configuration can be programmed through the IOCONFIG block for each GPIO pin (except for pins PIO0\_4 and PIO0\_5).
- On the LPC1100, all GPIO pins (except PIO0\_4 and PIO0\_5) are pulled up to 2.6 V ( $V_{DD} = 3.3$  V) if their pull-up resistor is enabled in the IOCONFIG block.

- On the LPC1100L and LPC1100XL series, all GPIO pins (except PIO0\_4 and PIO0\_5) are pulled up to 3.3 V ( $V_{DD} = 3.3$  V) if their pull-up resistor is enabled in the IOCONFIG block.
- Programmable open-drain mode for series LPC1100L and LPC1100XL.

## 7.8 UART

The LPC1110/11/12/13/14/15 contain one UART.

Support for RS-485/9-bit mode allows both software address detection and automatic address detection using 9-bit mode.

The UART includes a fractional baud rate generator. Standard baud rates such as 115200 Bd can be achieved with any crystal frequency above 2 MHz.

### 7.8.1 Features

- Maximum UART data bit rate of 3.125 MBit/s.
- 16 Byte Receive and Transmit FIFOs.
- Register locations conform to 16C550 industry standard.
- Receiver FIFO trigger points at 1 B, 4 B, 8 B, and 14 B.
- Built-in fractional baud rate generator covering wide range of baud rates without a need for external crystals of particular values.
- FIFO control mechanism that enables software flow control implementation.
- Support for RS-485/9-bit mode.
- Support for modem control.

## 7.9 SPI serial I/O controller

The LPC1100 and LPC1100L series contain two SPI controllers on the LQFP48 package and one SPI controller on the HVQFN33/TSSOP28/DIP28/TSSOP20/SO20 packages (SPI0).

The LPC1100XL series contain two SPI controllers.

Both SPI controllers support SSP features.

The SPI controller is capable of operation on a SSP, 4-wire SSI, or Microwire bus. It can interact with multiple masters and slaves on the bus. Only a single master and a single slave can communicate on the bus during a given data transfer. The SPI supports full duplex transfers, with frames of 4 bits to 16 bits of data flowing from the master to the slave and from the slave to the master. In practice, often only one of these data flows carries meaningful data.

### 7.9.1 Features

- Maximum SPI speed of 25 Mbit/s (master) or 4.17 Mbit/s (slave) (in SSP mode)
- Compatible with Motorola SPI, 4-wire Texas Instruments SSI, and National Semiconductor Microwire buses
- Synchronous serial communication

- Master or slave operation
- 8-frame FIFOs for both transmit and receive
- 4-bit to 16-bit frame

## 7.10 I<sup>2</sup>C-bus serial I/O controller

The LPC1110/11/12/13/14/15 contain one I<sup>2</sup>C-bus controller.

**Remark:** Part LPC1112FDH20/102 does not contain the I<sup>2</sup>C-bus controller.

The I<sup>2</sup>C-bus is bidirectional for inter-IC control using only two wires: a Serial Clock Line (SCL) and a Serial Data line (SDA). Each device is recognized by a unique address and can operate as either a receiver-only device (e.g., an LCD driver) or a transmitter with the capability to both receive and send information (such as memory). Transmitters and/or receivers can operate in either master or slave mode, depending on whether the chip has to initiate a data transfer or is only addressed. The I<sup>2</sup>C is a multi-master bus and can be controlled by more than one bus master connected to it.

### 7.10.1 Features

- The I<sup>2</sup>C-interface is a standard I<sup>2</sup>C-bus compliant interface with open-drain pins. The I<sup>2</sup>C-bus interface also supports Fast-mode Plus with bit rates up to 1 Mbit/s.
- Easy to configure as master, slave, or master/slave.
- Programmable clocks allow versatile rate control.
- Bidirectional data transfer between masters and slaves.
- Multi-master bus (no central master).
- Arbitration between simultaneously transmitting masters without corruption of serial data on the bus.
- Serial clock synchronization allows devices with different bit rates to communicate via one serial bus.
- Serial clock synchronization can be used as a handshake mechanism to suspend and resume serial transfer.
- The I<sup>2</sup>C-bus can be used for test and diagnostic purposes.
- The I<sup>2</sup>C-bus controller supports multiple address recognition and a bus monitor mode.

## 7.11 10-bit ADC

The LPC1110/11/12/13/14/15 contain one ADC. It is a single 10-bit successive approximation ADC with eight channels.

### 7.11.1 Features

- 10-bit successive approximation ADC.
- Input multiplexing among 8 pins.
- Power-down mode.
- Measurement range 0 V to V<sub>DD</sub>.
- 10-bit conversion time  $\geq 2.44 \mu\text{s}$  (up to 400 kSamples/s).
- Burst conversion mode for single or multiple inputs.

- Optional conversion on transition of input pin or timer match signal.
- Individual result registers for each ADC channel to reduce interrupt overhead.

## 7.12 General purpose external event counter/timers

The LPC1110/11/12/13/14/15 include two 32-bit counter/timers and two 16-bit counter/timers. The counter/timer is designed to count cycles of the system derived clock. It can optionally generate interrupts or perform other actions at specified timer values, based on four match registers. Each counter/timer also includes up to two capture inputs to trap the timer value when an input signal transitions, optionally generating an interrupt.

### 7.12.1 Features

- A 32-bit/16-bit timer/counter with a programmable 32-bit/16-bit prescaler.
- Counter or timer operation.
- Up to two capture channels per timer, that can take a snapshot of the timer value when an input signal transitions. A capture event may also generate an interrupt.
- The timer and prescaler may be configured to be cleared on a designated capture event. This feature permits easy pulse width measurement by clearing the timer on the leading edge of an input pulse and capturing the timer value on the trailing edge.
- Four match registers per timer that allow:
  - Continuous operation with optional interrupt generation on match.
  - Stop timer on match with optional interrupt generation.
  - Reset timer on match with optional interrupt generation.
- Up to four external outputs corresponding to match registers, with the following capabilities:
  - Set LOW on match.
  - Set HIGH on match.
  - Toggle on match.
  - Do nothing on match.

## 7.13 System tick timer

The ARM Cortex-M0 includes a system tick timer (SYSTICK) that is intended to generate a dedicated SYSTICK exception at a fixed time interval (typically 10 ms).

## 7.14 Watchdog timer (LPC1100 series, LPC111x/101/201/301)

**Remark:** The watchdog timer without windowed features is available on parts LPC111x/101/201/301.

The purpose of the watchdog is to reset the microcontroller within a selectable time period.

### 7.14.1 Features

- Internally resets chip if not periodically reloaded.
- Debug mode.

- Enabled by software but requires a hardware reset or a watchdog reset/interrupt to be disabled.
- Incorrect/Incomplete feed sequence causes reset/interrupt if enabled.
- Flag to indicate watchdog reset.
- Programmable 24-bit timer with internal prescaler.
- Selectable time period from  $(T_{cy(WDCLK)} \times 256 \times 4)$  to  $(T_{cy(WDCLK)} \times 2^{24} \times 4)$  in multiples of  $T_{cy(WDCLK)} \times 4$ .
- The Watchdog Clock (WDCLK) source can be selected from the Internal RC oscillator (IRC), the Watchdog oscillator, or the main clock. This gives a wide range of potential timing choices of Watchdog operation under different power reduction conditions. It also provides the ability to run the WDT from an entirely internal source that is not dependent on an external crystal and its associated components and wiring for increased reliability.

## 7.15 Windowed WatchDog Timer (LPC1100L and LPC1100XL series)

**Remark:** The windowed watchdog timer is available on the LPC1100L and LPC1100XL series only.

The purpose of the watchdog is to reset the controller if software fails to periodically service it within a programmable time window.

### 7.15.1 Features

- Internally resets chip if not periodically reloaded during the programmable time-out period.
- Optional windowed operation requires reload to occur between a minimum and maximum time period, both programmable.
- Optional warning interrupt can be generated at a programmable time prior to watchdog time-out.
- Enabled by software but requires a hardware reset or a watchdog reset/interrupt to be disabled.
- Incorrect feed sequence causes reset or interrupt if enabled.
- Flag to indicate watchdog reset.
- Programmable 24-bit timer with internal prescaler.
- Selectable time period from  $(T_{cy(WDCLK)} \times 256 \times 4)$  to  $(T_{cy(WDCLK)} \times 2^{24} \times 4)$  in multiples of  $T_{cy(WDCLK)} \times 4$ .
- The Watchdog Clock (WDCLK) source can be selected from the IRC or the dedicated watchdog oscillator (WDO). This gives a wide range of potential timing choices of watchdog operation under different power conditions.

## 7.16 Clocking and power control

### 7.16.1 Crystal oscillators

The LPC1110/11/12/13/14/15 include three independent oscillators. These are the system oscillator, the Internal RC oscillator (IRC), and the Watchdog oscillator. Each oscillator can be used for more than one purpose as required in a particular application.

Following reset, the LPC1110/11/12/13/14/15 will operate from the Internal RC oscillator until switched by software. This allows systems to operate without any external crystal and the bootloader code to operate at a known frequency.

See [Figure 15](#) for an overview of the LPC1110/11/12/13/14/15 clock generation.

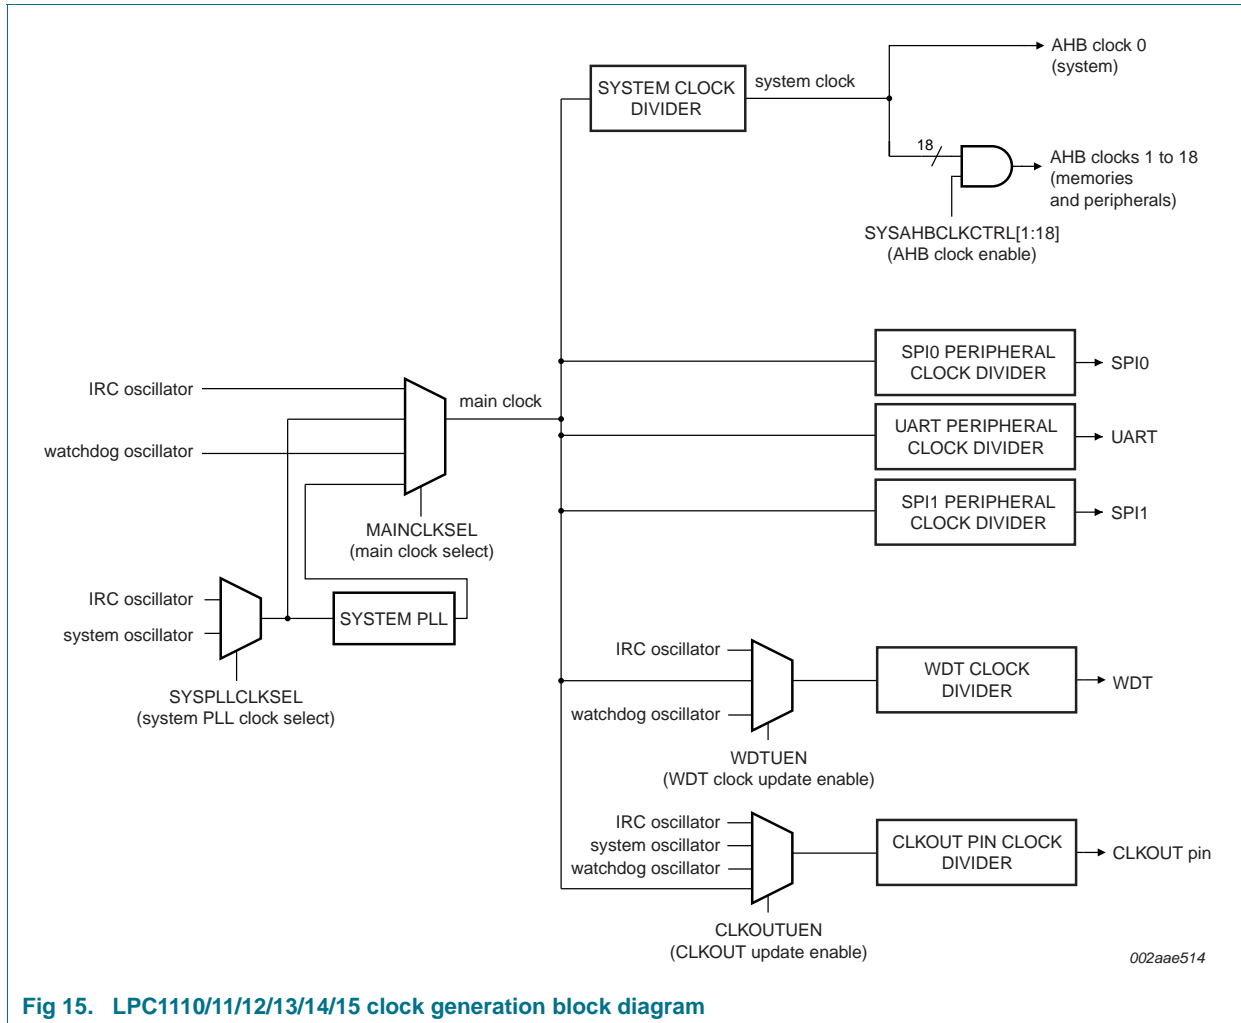

Fig 15. LPC1110/11/12/13/14/15 clock generation block diagram

### 7.16.1.1 Internal RC oscillator

The IRC may be used as the clock source for the WDT, and/or as the clock that drives the PLL and subsequently the CPU. The nominal IRC frequency is 12 MHz. The IRC is trimmed to 1 % accuracy over the entire voltage and temperature range.

Upon power-up or any chip reset, the LPC1110/11/12/13/14/15 use the IRC as the clock source. Software may later switch to one of the other available clock sources.

### 7.16.1.2 System oscillator

The system oscillator can be used as the clock source for the CPU, with or without using the PLL.

The system oscillator operates at frequencies of 1 MHz to 25 MHz. This frequency can be boosted to a higher frequency, up to the maximum CPU operating frequency, by the system PLL.

#### 7.16.1.3 Watchdog oscillator

The watchdog oscillator can be used as a clock source that directly drives the CPU, the watchdog timer, or the CLKOUT pin. The watchdog oscillator nominal frequency is programmable between 9.4 kHz and 2.3 MHz. The frequency spread over processing and temperature is  $\pm 40\%$ .

#### 7.16.2 System PLL

The PLL accepts an input clock frequency in the range of 10 MHz to 25 MHz. The input frequency is multiplied up to a high frequency with a Current Controlled Oscillator (CCO). The multiplier can be an integer value from 1 to 32. The CCO operates in the range of 156 MHz to 320 MHz, so there is an additional divider in the loop to keep the CCO within its frequency range while the PLL is providing the desired output frequency. The PLL output frequency must be lower than 100 MHz. The output divider may be set to divide by 2, 4, 8, or 16 to produce the output clock. Since the minimum output divider value is 2, it is insured that the PLL output has a 50 % duty cycle. The PLL is turned off and bypassed following a chip reset and may be enabled by software. The program must configure and activate the PLL, wait for the PLL to lock, and then connect to the PLL as a clock source. The PLL settling time is 100  $\mu$ s.

#### 7.16.3 Clock output

The LPC1110/11/12/13/14/15 features a clock output function that routes the IRC oscillator, the system oscillator, the watchdog oscillator, or the main clock to an output pin.

#### 7.16.4 Wake-up process

The LPC1110/11/12/13/14/15 begin operation at power-up and when awakened from Deep power-down mode by using the 12 MHz IRC oscillator as the clock source. This allows chip operation to resume quickly. If the system oscillator or the PLL is needed by the application, software will need to enable these features and wait for them to stabilize before they are used as a clock source.

#### 7.16.5 Power control

The LPC1110/11/12/13/14/15 support a variety of power control features. There are three special modes of processor power reduction: Sleep mode, Deep-sleep mode, and Deep power-down mode. The CPU clock rate may also be controlled as needed by changing clock sources, reconfiguring PLL values, and/or altering the CPU clock divider value. This allows a trade-off of power versus processing speed based on application requirements. In addition, a register is provided for shutting down the clocks to individual on-chip peripherals, allowing fine tuning of power consumption by eliminating all dynamic power use in any peripherals that are not required for the application. Selected peripherals have their own clock divider which provides even better power control.

##### 7.16.5.1 Power profiles (LPC1100L and LPC1100XL series only)

The power consumption in Active and Sleep modes can be optimized for the application through simple calls to the power profile. The power configuration routine configures the LPC1110/11/12/13/14/15 for one of the following power modes:

- Default mode corresponding to power configuration after reset.
- CPU performance mode corresponding to optimized processing capability.
- Efficiency mode corresponding to optimized balance of current consumption and CPU performance.
- Low-current mode corresponding to lowest power consumption.

In addition, the power profile includes routines to select the optimal PLL settings for a given system clock and PLL input clock.

#### 7.16.5.2 Sleep mode

When Sleep mode is entered, the clock to the core is stopped. Resumption from the Sleep mode does not need any special sequence but re-enabling the clock to the ARM core.

In Sleep mode, execution of instructions is suspended until either a reset or interrupt occurs. Peripheral functions continue operation during Sleep mode and may generate interrupts to cause the processor to resume execution. Sleep mode eliminates dynamic power used by the processor itself, memory systems and related controllers, and internal buses.

#### 7.16.5.3 Deep-sleep mode

In Deep-sleep mode, the chip is in Sleep mode, and in addition all analog blocks are shut down. As an exception, the user has the option to keep the watchdog oscillator and the BOD circuit running for self-timed wake-up and BOD protection. Deep-sleep mode allows for additional power savings.

Up to 13 pins total serve as external wake-up pins to the start logic to wake up the chip from Deep-sleep mode.

Unless the watchdog oscillator is selected to run in Deep-sleep mode, the clock source should be switched to IRC before entering Deep-sleep mode, because the IRC can be switched on and off glitch-free.

#### 7.16.5.4 Deep power-down mode

In Deep power-down mode, power is shut off to the entire chip with the exception of the WAKEUP pin. The LPC1110/11/12/13/14/15 can wake up from Deep power-down mode via the WAKEUP pin.

A LOW-going pulse as short as 50 ns wakes up the part from Deep power-down mode.

When entering Deep power-down mode, an external pull-up resistor is required on the WAKEUP pin to hold it HIGH. The  $\overline{\text{RESET}}$  pin must also be held HIGH to prevent it from floating while in Deep power-down mode.

## 7.17 System control

### 7.17.1 Start logic

The start logic connects external pins to corresponding interrupts in the NVIC. Each pin shown in [Table 8](#) to [Table 9](#) as input to the start logic has an individual interrupt in the NVIC interrupt vector table. The start logic pins can serve as external interrupt pins when the chip is running. In addition, an input signal on the start logic pins can wake up the chip from Deep-sleep mode when all clocks are shut down.

The start logic must be configured in the system configuration block and in the NVIC before being used.

### 7.17.2 Reset

Reset has four sources on the LPC1110/11/12/13/14/15: the  $\overline{\text{RESET}}$  pin, the Watchdog reset, Power-On Reset (POR), and the BrownOut Detection (BOD) circuit. The  $\overline{\text{RESET}}$  pin is a Schmitt trigger input pin. Assertion of chip reset by any source, once the operating voltage attains a usable level, starts the IRC and initializes the flash controller.

A LOW-going pulse as short as 50 ns resets the part.

When the internal Reset is removed, the processor begins executing at address 0, which is initially the Reset vector mapped from the boot block. At that point, all of the processor and peripheral registers have been initialized to predetermined values.

An external pull-up resistor is required on the  $\overline{\text{RESET}}$  pin if Deep power-down mode is used.

### 7.17.3 Brownout detection

The LPC1110/11/12/13/14/15 includes up to four levels for monitoring the voltage on the  $V_{DD}$  pin. If this voltage falls below one of the selected levels, the BOD asserts an interrupt signal to the NVIC. This signal can be enabled for interrupt in the Interrupt Enable Register in the NVIC in order to cause a CPU interrupt; if not, software can monitor the signal by reading a dedicated status register. Four threshold levels can be selected to cause a forced reset of the chip.

### 7.17.4 Code security (Code Read Protection - CRP)

This feature of the LPC1110/11/12/13/14/15 allows user to enable different levels of security in the system so that access to the on-chip flash and use of the Serial Wire Debugger (SWD) and In-System Programming (ISP) can be restricted. When needed, CRP is invoked by programming a specific pattern into a dedicated flash location. IAP commands are not affected by the CRP.

In addition, ISP entry via the PIO0\_1 pin can be disabled without enabling CRP. For details see the *LPC111x user manual*.

There are three levels of Code Read Protection:

1. CRP1 disables access to the chip via the SWD and allows partial flash update (excluding flash sector 0) using a limited set of the ISP commands. This mode is useful when CRP is required and flash field updates are needed but all sectors can not be erased.
2. CRP2 disables access to the chip via the SWD and only allows full flash erase and update using a reduced set of the ISP commands.
3. Running an application with level CRP3 selected fully disables any access to the chip via the SWD pins and the ISP. This mode effectively disables ISP override using PIO0\_1 pin, too. It is up to the user's application to provide (if needed) flash update mechanism using IAP calls or call reinvoke ISP command to enable flash update via the UART.

**CAUTION**

If level three Code Read Protection (CRP3) is selected, no future factory testing can be performed on the device.

In addition to the three CRP levels, sampling of pin PIO0\_1 for valid user code can be disabled. For details see the *LPC111x user manual*.

**7.17.5 APB interface**

The APB peripherals are located on one APB bus.

**7.17.6 AHBLite**

The AHBLite connects the CPU bus of the ARM Cortex-M0 to the flash memory, the main static RAM, and the Boot ROM.

**7.17.7 External interrupt inputs**

All GPIO pins can be level or edge sensitive interrupt inputs. In addition, start logic inputs serve as external interrupts (see [Section 7.17.1](#)).

**7.18 Emulation and debugging**

Debug functions are integrated into the ARM Cortex-M0. Serial wire debug with four breakpoints and two watchpoints is supported.

## 8. Limiting values

**Table 12. Limiting values**

In accordance with the Absolute Maximum Rating System (IEC 60134).<sup>[1]</sup>

Symbol	Parameter	Conditions	Min	Max	Unit
V <sub>DD</sub>	supply voltage (core and external rail)		[2] -0.5	+4.6	V
V <sub>I</sub>	input voltage	5 V tolerant I/O pins; only valid when the V <sub>DD</sub> supply voltage is present	[5][2] -0.5	+5.5	V
		5 V tolerant open-drain pins PIO0_4 and PIO0_5	[2][4] -0.5	+5.5	V
V <sub>IA</sub>	analog input voltage	pin configured as analog input	[2] [3] -0.5	4.6	V
I <sub>DD</sub>	supply current	per supply pin	-	100	mA
I <sub>SS</sub>	ground current	per ground pin	-	100	mA
I <sub>latch</sub>	I/O latch-up current	-(0.5V <sub>DD</sub> ) < V <sub>I</sub> < (1.5V <sub>DD</sub> ); T <sub>j</sub> < 125 °C	-	100	mA
T <sub>stg</sub>	storage temperature	non-operating	[6] -65	+150	°C
T <sub>j(max)</sub>	maximum junction temperature		-	150	°C
P <sub>tot(pack)</sub>	total power dissipation (per package)	based on package heat transfer, not device power consumption	-	1.5	W
V <sub>ESD</sub>	electrostatic discharge voltage	human body model; all pins	[7]	+6500	V

[1] The following applies to the limiting values:

- This product includes circuitry specifically designed for the protection of its internal devices from the damaging effects of excessive static charge. Nonetheless, it is suggested that conventional precautions be taken to avoid applying greater than the rated maximum.
- Parameters are valid over operating temperature range unless otherwise specified. All voltages are with respect to V<sub>SS</sub> unless otherwise noted.
- The limiting values are stress ratings only. Operating the part at these values is not recommended, and proper operation is not guaranteed. The conditions for functional operation are specified in [Table 13](#).

[2] Maximum/minimum voltage above the maximum operating voltage (see [Table 13](#)) and below ground that can be applied for a short time (< 10 ms) to a device without leading to irrecoverable failure. Failure includes the loss of reliability and shorter lifetime of the device.

[3] See [Table 14](#) for maximum operating voltage.

[4] V<sub>DD</sub> present or not present. Compliant with the I<sup>2</sup>C-bus standard. 5.5 V can be applied to this pin when V<sub>DD</sub> is powered down.

[5] Including voltage on outputs in 3-state mode.

[6] The maximum non-operating storage temperature is different than the temperature for required shelf life which should be determined based on required shelf lifetime. Please refer to the JEDEC spec (J-STD-033B.1) for further details.

[7] Human body model: equivalent to discharging a 100 pF capacitor through a 1.5 kΩ series resistor.

## 9. Static characteristics

**Table 13. Static characteristics**

$T_{amb} = -40\text{ }^{\circ}\text{C}$  to  $+85\text{ }^{\circ}\text{C}$ , unless otherwise specified.

Symbol	Parameter	Conditions	Min	Typ <sup>[1]</sup>	Max	Unit

		pins configured as GPIO	-	-	2.8	pF

- [1] Typical ratings are not guaranteed. The values listed are at room temperature (25 °C), nominal supply voltages.
- [2] T<sub>amb</sub> = 25 °C.
- [3] I<sub>DD</sub> measurements were performed with all pins configured as GPIO outputs driven LOW and pull-up resistors disabled.
- [4] IRC enabled; system oscillator disabled; system PLL disabled.
- [5] System oscillator enabled; IRC disabled; system PLL disabled.
- [6] BOD disabled.
- [7] All peripherals disabled in the SYSAHBCLKCTRL register. Peripheral clocks to UART and SPI0/1 disabled in system configuration block.
- [8] IRC disabled; system oscillator enabled; system PLL enabled.
- [9] All oscillators and analog blocks turned off in the PDSLEEPCFG register; PDSLEEPCFG = 0x0000 18FF.
- [10] WAKEUP pin pulled HIGH externally.
- [11] Low-current mode PWR\_LOW\_CURRENT selected when running the set\_power routine in the power profiles.
- [12] Including voltage on outputs in 3-state mode.
- [13] V<sub>DD</sub> supply voltage must be present.
- [14] 3-state outputs go into 3-state mode in Deep power-down mode.
- [15] Allowed as long as the current limit does not exceed the maximum current allowed by the device.
- [16] To V<sub>SS</sub>.

**Table 14. ADC static characteristics**

$T_{amb} = -40\text{ }^{\circ}\text{C}$  to  $+85\text{ }^{\circ}\text{C}$  unless otherwise specified; ADC frequency 4.5 MHz,  $V_{DD} = 2.5\text{ V}$  to  $3.6\text{ V}$ .

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
$V_{IA}$	analog input voltage		0	-	$V_{DD}$	V
$C_{ia}$	analog input capacitance		-	-	1	pF
$E_D$	differential linearity error		[1][2]	-	$\pm 1$	LSB
$E_{L(adj)}$	integral non-linearity		[3]	-	$\pm 1.5$	LSB
$E_O$	offset error		[4]	-	$\pm 3.5$	LSB
$E_G$	gain error		[5]	-	0.6	%
$E_T$	absolute error		[6]	-	$\pm 4$	LSB
$R_{vsi}$	voltage source interface resistance		-	-	40	k $\Omega$
$R_i$	input resistance		[7][8]	-	2.5	M $\Omega$

[1] The ADC is monotonic, there are no missing codes.

[2] The differential linearity error ( $E_D$ ) is the difference between the actual step width and the ideal step width. See [Figure 16](#).

[3] The integral non-linearity ( $E_{L(adj)}$ ) is the peak difference between the center of the steps of the actual and the ideal transfer curve after appropriate adjustment of gain and offset errors. See [Figure 16](#).

[4] The offset error ( $E_O$ ) is the absolute difference between the straight line which fits the actual curve and the straight line which fits the ideal curve. See [Figure 16](#).

[5] The gain error ( $E_G$ ) is the relative difference in percent between the straight line fitting the actual transfer curve after removing offset error, and the straight line which fits the ideal transfer curve. See [Figure 16](#).

[6] The absolute error ( $E_T$ ) is the maximum difference between the center of the steps of the actual transfer curve of the non-calibrated ADC and the ideal transfer curve. See [Figure 16](#).

[7]  $T_{amb} = 25\text{ }^{\circ}\text{C}$ ; maximum sampling frequency  $f_s = 400\text{ kSamples/s}$  and analog input capacitance  $C_{ia} = 1\text{ pF}$ .

[8] Input resistance  $R_i$  depends on the sampling frequency  $f_s$ :  $R_i = 1 / (f_s \times C_{ia})$ .

## 9.1 BOD static characteristics

Table 15. BOD static characteristics<sup>[1]</sup>

$T_{amb} = 25\text{ }^{\circ}\text{C}$ .

		reset level 3					
		assertion	-	2.63	-	V	
		de-assertion	-	2.71	-	V	

[1] Interrupt levels are selected by writing the level value to the BOD control register BODCTRL, see *LPC111x user manual*.

## 9.2 Power consumption LPC1100 series (LPC111x/101/201/301)

Power measurements in Active, Sleep, and Deep-sleep modes were performed under the following conditions (see *LPC111x user manual*):

- Configure all pins as GPIO with pull-up resistor disabled in the IOCONFIG block.
- Configure GPIO pins as outputs using the GPIO<sub>DIR</sub> registers.
- Write 0 to all GPIO<sub>DATA</sub> registers to drive the outputs LOW.

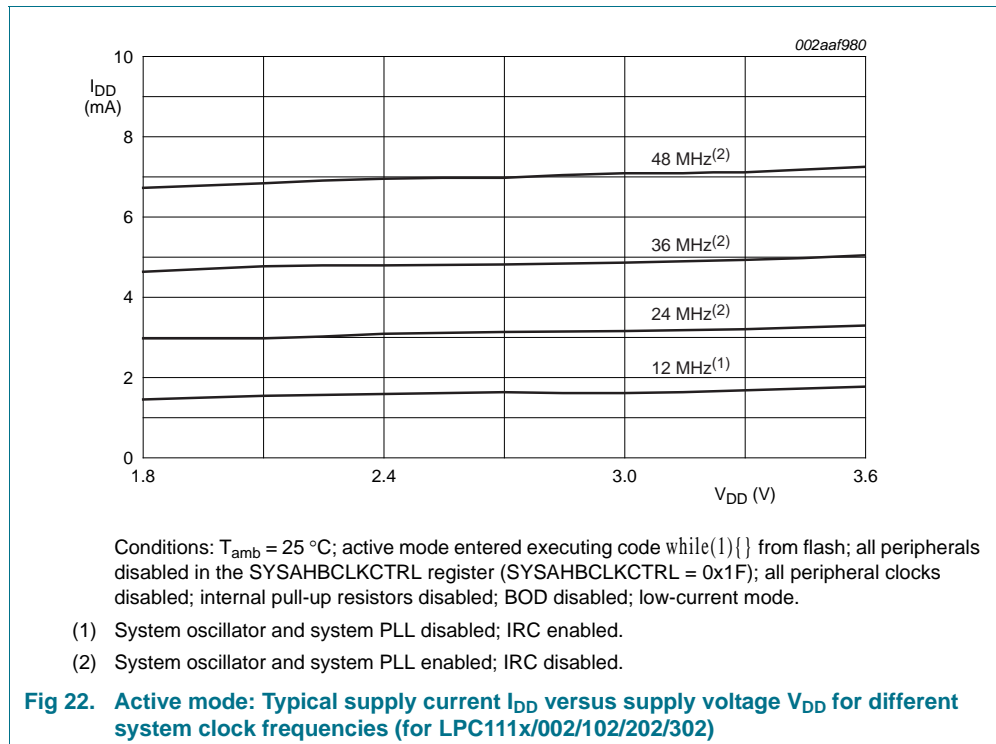

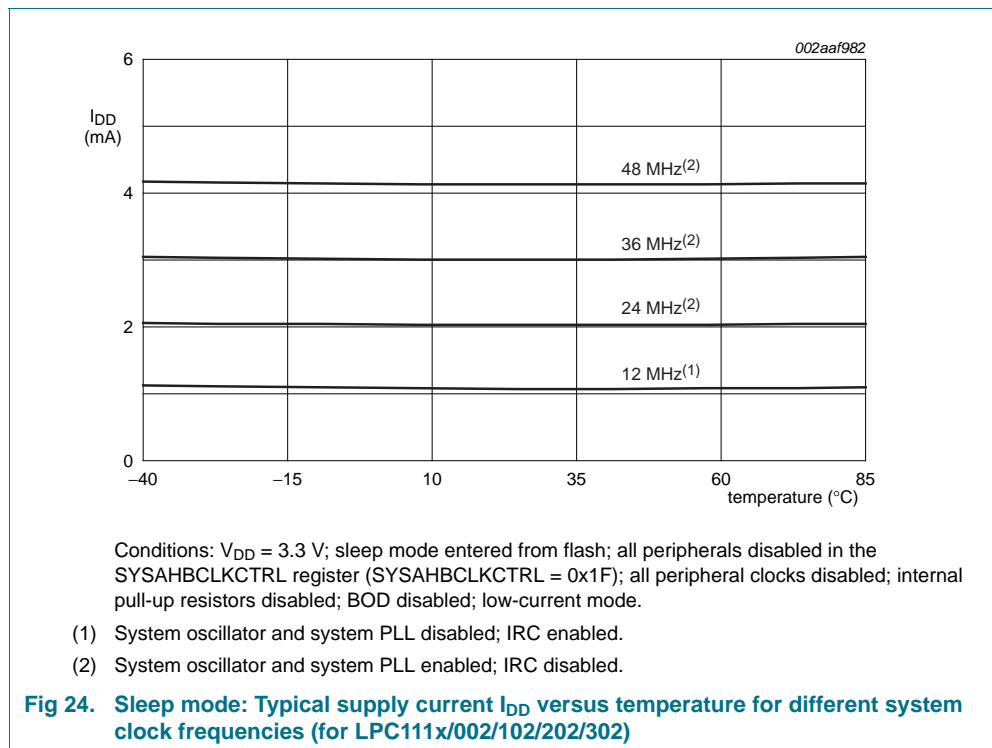

### 9.3 Power consumption LPC1100L series (LPC111x/002/102/202/302)

Power measurements in Active, Sleep, and Deep-sleep modes were performed under the following conditions (see *LPC111x user manual*):

- Configure all pins as GPIO with pull-up resistor disabled in the IOCONFIG block.
- Configure GPIO pins as outputs using the GPIO nDIR registers.
- Write 0 to all GPIO nDATA registers to drive the outputs LOW.

## 9.4 Power consumption LPC1100XL series (LPC111x/103/203/303/323/333)

Table 16. Power consumption at very low frequencies using the watchdog oscillator

		Sleep mode;					
		system clock = 8.8 kHz	-	274	-	μA	
		system clock = 257 kHz	-	285	-	μA	
		system clock = 515 kHz	-	295	-	μA	
		system clock = 784 kHz	-	309	-	μA	
		system clock = 1028 kHz	-	317	-	μA	
		system clock = 2230 kHz	-	368	-	μA	

[1] WDT OSC enabled, V<sub>DD</sub> = 3.3 V, Temp = 25 °C.

Low-current mode PWR\_LOW\_CURRENT selected when running the set\_power routine in the power profiles.

I<sub>DD</sub> measurements were performed with all pins configured as GPIO outputs driven LOW and pull-up resistors disabled, IRC disabled, System Oscillator disabled, System PLL disabled, BOD disabled.

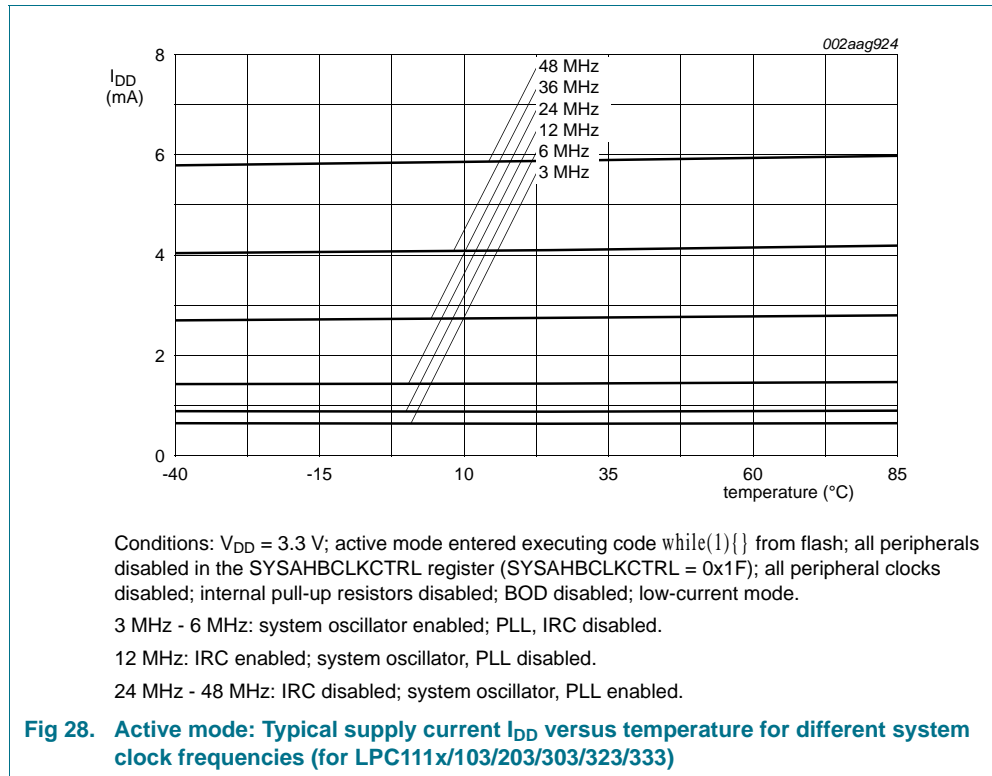

All peripherals disabled in the SYSAHBCLKCTRL register. Peripheral clocks to UART and SPI0/1 disabled in system configuration block.

[2] Typical ratings are not guaranteed. The values listed are at room temperature (25 °C), nominal supply voltages.

Power measurements in Active, Sleep, and Deep-sleep modes were performed under the following conditions (see *LPC111x user manual*):

- Configure all pins as GPIO with pull-up resistor disabled in the IOCONFIG block.
- Configure GPIO pins as outputs using the GPIO nDIR registers.
- Write 0 to all GPIO nDATA registers to drive the outputs LOW.

9.5 CoreMark data

## 9.6 Peripheral power consumption

The supply current per peripheral is measured as the difference in supply current between the peripheral block enabled and the peripheral block disabled in the SYSAHBCLKCFG and PDRUNCFG (for analog blocks) registers. All other blocks are disabled in both registers and no code is executed. Measured on a typical sample at  $T_{amb} = 25\text{ }^{\circ}\text{C}$ . Unless noted otherwise, the system oscillator and PLL are running in both measurements.

The supply currents are shown for system clock frequencies of 12 MHz and 48 MHz.

**Table 17. Power consumption for individual analog and digital blocks**

Peripheral	Typical supply current in mA			Notes
	n/a	12 MHz	48 MHz	
IRC	0.27	-	-	System oscillator running; PLL off; independent of main clock frequency.
System oscillator at 12 MHz	0.22	-	-	IRC running; PLL off; independent of main clock frequency.
Watchdog oscillator at 500 kHz/2	0.004	-	-	System oscillator running; PLL off; independent of main clock frequency.
BOD	0.051	-	-	Independent of main clock frequency.
Main PLL	-	0.21	-	
ADC	-	0.08	0.29	
CLKOUT	-	0.12	0.47	Main clock divided by 4 in the CLKOUTDIV register.
CT16B0	-	0.02	0.06	
CT16B1	-	0.02	0.06	
CT32B0	-	0.02	0.07	
CT32B1	-	0.02	0.06	
GPIO	-	0.23	0.88	GPIO pins configured as outputs and set to LOW. Direction and pin state are maintained if the GPIO is disabled in the SYSAHBCLKCFG register.
IOCONFIG	-	0.03	0.10	
I2C	-	0.04	0.13	
ROM	-	0.04	0.15	
SPI0	-	0.12	0.45	
SPI1	-	0.12	0.45	
UART	-	0.22	0.82	
WDT/WWDT	-	0.02	0.06	Main clock selected as clock source for the WDT.

9.7 Electrical pin characteristics

## 10. Dynamic characteristics

### 10.1 Power-up ramp conditions

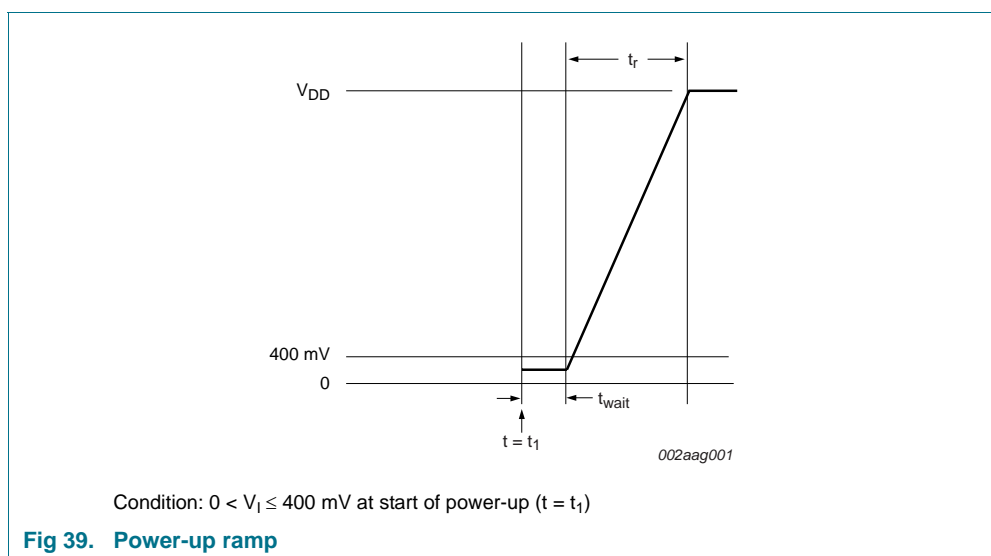

**Table 18. Power-up characteristics**

$T_{amb} = -40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ .

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
$t_r$	rise time	at $t = t_1$ : $0 < V_I \leq 400$ mV	[1] 0	-	500	ms
$t_{wait}$	wait time		[1][2] 12	-	-	$\mu\text{s}$
$V_I$	input voltage	at $t = t_1$ on pin $V_{DD}$	0	-	400	mV

[1] See [Figure 39](#).

[2] The wait time specifies the time the power supply must be at levels below 400 mV before ramping up.

**Fig 39. Power-up ramp**

### 10.2 Flash memory

**Table 19. Flash characteristics**

$T_{amb} = -40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ , unless otherwise specified.

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
$N_{endu}$	endurance		[1] 10000	100000	-	cycles
$t_{ret}$	retention time	powered	10	-	-	years
		unpowered	20	-	-	years
$t_{er}$	erase time	sector or multiple consecutive sectors	95	100	105	ms
$t_{prog}$	programming time		[2] 0.95	1	1.05	ms

[1] Number of program/erase cycles.

[2] Programming times are given for writing 256 bytes from RAM to the flash. Data must be written to the flash in blocks of 256 bytes.

### 10.3 External clock

**Table 20. Dynamic characteristic: external clock**

$T_{amb} = -40\text{ }^{\circ}\text{C}$  to  $+85\text{ }^{\circ}\text{C}$ ;  $V_{DD}$  over specified ranges.<sup>[1]</sup>

Symbol	Parameter	Conditions	Min	Typ <sup>[2]</sup>	Max	Unit
$f_{osc}$	oscillator frequency		1	-	25	MHz
$T_{cy(clk)}$	clock cycle time		40	-	1000	ns
$t_{CHCX}$	clock HIGH time		$T_{cy(clk)} \times 0.4$	-	-	ns
$t_{CLCX}$	clock LOW time		$T_{cy(clk)} \times 0.4$	-	-	ns
$t_{CLCH}$	clock rise time		-	-	5	ns
$t_{CHCL}$	clock fall time		-	-	5	ns

[1] Parameters are valid over operating temperature range unless otherwise specified.

[2] Typical ratings are not guaranteed. The values listed are at room temperature (25 °C), nominal supply voltages.

**Fig 40. External clock timing (with an amplitude of at least  $V_{i(RMS)} = 200\text{ mV}$ )**

10.4 Internal oscillators

Table 21. Dynamic characteristic: internal oscillators

$T_{amb} = -40\text{ }^{\circ}\text{C to } +85\text{ }^{\circ}\text{C}; 2.7\text{ V} \leq V_{DD} \leq 3.6\text{ V}$  [1]

Symbol	Parameter	Conditions	Min	Typ[2]	Max	Unit
$f_{osc(RC)}$	internal RC oscillator frequency	-	11.88	12	12.12	MHz

[1] Parameters are valid over operating temperature range unless otherwise specified.

[2] Typical ratings are not guaranteed. The values listed are at room temperature (25 °C), nominal supply voltages.

Fig 41. Internal RC oscillator frequency versus temperature

Table 22. Dynamic characteristics: Watchdog oscillator

Symbol	Parameter	Conditions	Min	Typ <sup>[1]</sup>	Max	Unit
$f_{\text{osc(int)}}$	internal oscillator frequency	DIVSEL = 0x1F, FREQSEL = 0x1 in the WDTOSCCTRL register;	[2][3] -	9.4	-	kHz
		DIVSEL = 0x00, FREQSEL = 0xF in the WDTOSCCTRL register	[2][3] -	2300	-	kHz

[1] Typical ratings are not guaranteed. The values listed are at room temperature (25 °C), nominal supply voltages.

[2] The typical frequency spread over processing and temperature ( $T_{\text{amb}} = -40\text{ °C}$  to  $+85\text{ °C}$ ) is  $\pm 40\%$ .

[3] See the *LPC111x user manual*.

## 10.5 I/O pins

Table 23. Dynamic characteristic: I/O pins<sup>[1]</sup>

$T_{\text{amb}} = -40\text{ °C}$  to  $+85\text{ °C}$ ;  $3.0\text{ V} \leq V_{\text{DD}} \leq 3.6\text{ V}$ .

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
$t_r$	rise time	pin configured as output	3.0	-	5.0	ns
$t_f$	fall time	pin configured as output	2.5	-	5.0	ns

[1] Applies to standard port pins and  $\overline{\text{RESET}}$  pin.

10.6 I<sup>2</sup>C-bus**Table 24. Dynamic characteristic: I<sup>2</sup>C-bus pins<sup>[1]</sup>** $T_{amb} = -40^{\circ}\text{C to } +85^{\circ}\text{C}$ <sup>[2]</sup>

Symbol	Parameter	Conditions	Min	Max	Unit
f <sub>SCL</sub>	SCL clock frequency	Standard-mode	0	100	kHz
		Fast-mode	0	400	kHz
		Fast-mode Plus	0	1	MHz
t <sub>f</sub>	fall time	<sup>[4][5][6][7]</sup> of both SDA and SCL signals Standard-mode	-	300	ns
		Fast-mode	20 + 0.1 × C <sub>b</sub>	300	ns
		Fast-mode Plus	-	120	ns
t <sub>LOW</sub>	LOW period of the SCL clock	Standard-mode	4.7	-	μs
		Fast-mode	1.3	-	μs
		Fast-mode Plus	0.5	-	μs
t <sub>HIGH</sub>	HIGH period of the SCL clock	Standard-mode	4.0	-	μs
		Fast-mode	0.6	-	μs
		Fast-mode Plus	0.26	-	μs
t <sub>HD;DAT</sub>	data hold time	<sup>[3][4][8]</sup> Standard-mode	0	-	μs
		Fast-mode	0	-	μs
		Fast-mode Plus	0	-	μs
t <sub>SU;DAT</sub>	data set-up time	<sup>[9][10]</sup> Standard-mode	250	-	ns
		Fast-mode	100	-	ns
		Fast-mode Plus	50	-	ns

[1] See the I<sup>2</sup>C-bus specification *UM10204* for details.

[2] Parameters are valid over operating temperature range unless otherwise specified.

[3] t<sub>HD;DAT</sub> is the data hold time that is measured from the falling edge of SCL; applies to data in transmission and the acknowledge.

[4] A device must internally provide a hold time of at least 300 ns for the SDA signal (with respect to the V<sub>IH(min)</sub> of the SCL signal) to bridge the undefined region of the falling edge of SCL.

[5] C<sub>b</sub> = total capacitance of one bus line in pF.

[6] The maximum t<sub>f</sub> for the SDA and SCL bus lines is specified at 300 ns. The maximum fall time for the SDA output stage t<sub>f</sub> is specified at 250 ns. This allows series protection resistors to be connected in between the SDA and the SCL pins and the SDA/SCL bus lines without exceeding the maximum specified t<sub>f</sub>.

[7] In Fast-mode Plus, fall time is specified the same for both output stage and bus timing. If series resistors are used, designers should allow for this when considering bus timing.

[8] The maximum t<sub>HD;DAT</sub> could be 3.45 μs and 0.9 μs for Standard-mode and Fast-mode but must be less than the maximum of t<sub>VD;DAT</sub> or t<sub>VD;ACK</sub> by a transition time (see *UM10204*). This maximum must only be met if the device does not stretch the LOW period (t<sub>LOW</sub>) of the SCL signal. If the clock stretches the SCL, the data must be valid by the set-up time before it releases the clock.

[9] t<sub>SU;DAT</sub> is the data set-up time that is measured with respect to the rising edge of SCL; applies to data in transmission and the acknowledge.

[10] A Fast-mode I<sup>2</sup>C-bus device can be used in a Standard-mode I<sup>2</sup>C-bus system but the requirement t<sub>SU;DAT</sub> = 250 ns must then be met. This will automatically be the case if the device does not stretch the LOW period of the SCL signal. If such a device does stretch the LOW period of the SCL signal, it must output the next data bit to the SDA line t<sub>f(max)</sub> + t<sub>SU;DAT</sub> = 1000 + 250 = 1250 ns (according to the Standard-mode I<sup>2</sup>C-bus specification) before the SCL line is released. Also the acknowledge timing must meet this set-up time.

Fig 42. I<sup>2</sup>C-bus pins clock timing

### 10.7 SPI interfaces

Table 25. Dynamic characteristics of SPI pins in SPI mode

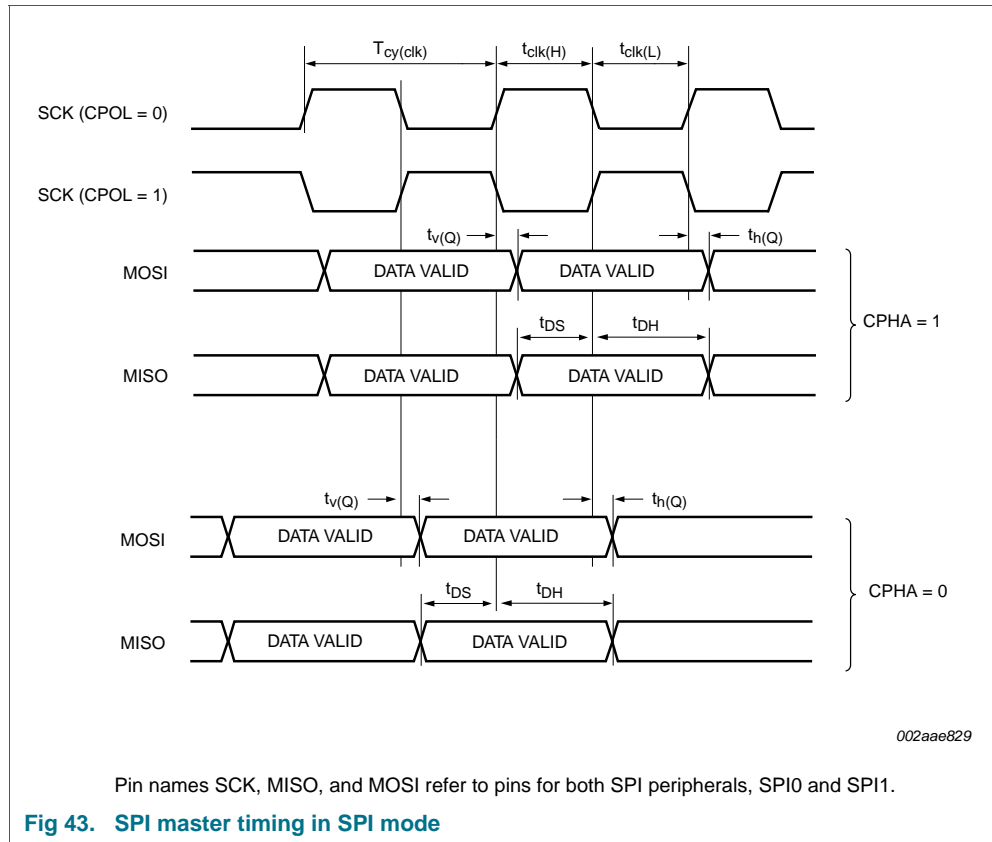

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
<b>SPI master (in SPI mode)</b>						
$T_{cy(clk)}$	clock cycle time	full-duplex mode [1]	50	-	-	ns
		when only transmitting [1]	40	-	-	ns
$t_{DS}$	data set-up time	in SPI mode $2.4\text{ V} \leq V_{DD} \leq 3.6\text{ V}$ [2]	15	-	-	ns
		$2.0\text{ V} \leq V_{DD} < 2.4\text{ V}$ [2]	20	-	-	ns
		$1.8\text{ V} \leq V_{DD} < 2.0\text{ V}$ [2]	24	-	-	ns
$t_{DH}$	data hold time	in SPI mode [2]	0	-	-	ns
$t_{v(Q)}$	data output valid time	in SPI mode [2]	-	-	10	ns
$t_{h(Q)}$	data output hold time	in SPI mode [2]	0	-	-	ns
<b>SPI slave (in SPI mode)</b>						
$T_{cy(PCLK)}$	PCLK cycle time		20	-	-	ns
$t_{DS}$	data set-up time	in SPI mode [3][4]	0	-	-	ns
$t_{DH}$	data hold time	in SPI mode [3][4]	$3 \times T_{cy(PCLK)} + 4$	-	-	ns
$t_{v(Q)}$	data output valid time	in SPI mode [3][4]	-	-	$3 \times T_{cy(PCLK)} + 11$	ns
$t_{h(Q)}$	data output hold time	in SPI mode [3][4]	-	-	$2 \times T_{cy(PCLK)} + 5$	ns

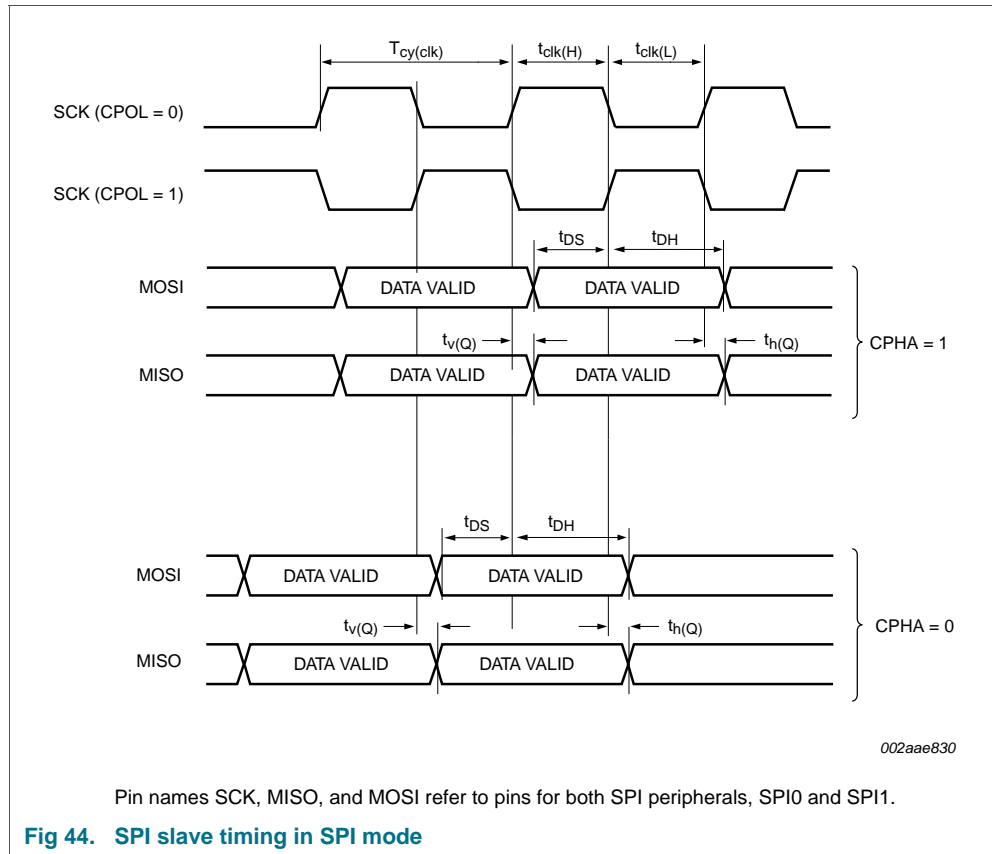

[1]  $T_{cy(clk)} = (SSPCLKDIV \times (1 + SCR) \times CPSDVSR) / f_{main}$ . The clock cycle time derived from the SPI bit rate  $T_{cy(clk)}$  is a function of the main clock frequency  $f_{main}$ , the SPI peripheral clock divider (SSPCLKDIV), the SPI SCR parameter (specified in the SSP0CR0 register), and the SPI CPSDVSR parameter (specified in the SPI clock prescale register).

[2]  $T_{amb} = -40\text{ }^\circ\text{C}$  to  $85\text{ }^\circ\text{C}$ .

[3]  $T_{cy(clk)} = 12 \times T_{cy(PCLK)}$ .

[4]  $T_{amb} = 25\text{ }^\circ\text{C}$ ; for normal voltage supply range:  $V_{DD} = 3.3\text{ V}$ .

## 11. Application information

### 11.1 ADC usage notes

The following guidelines show how to increase the performance of the ADC in a noisy environment beyond the ADC specifications listed in [Table 14](#):

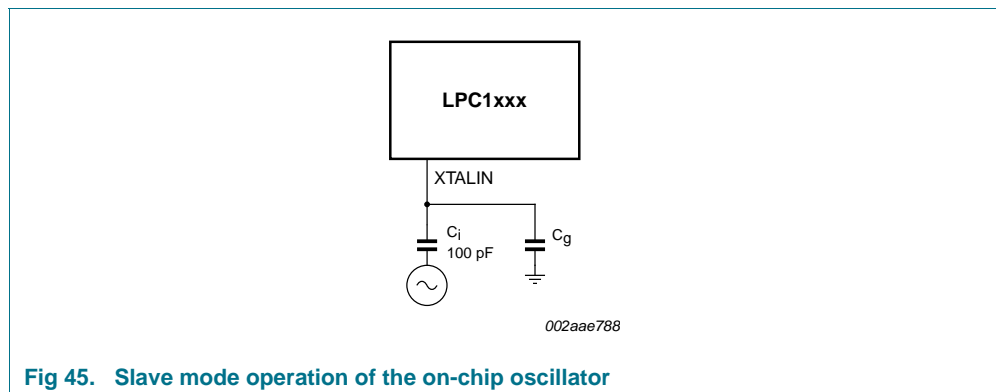

- The ADC input trace must be short and as close as possible to the LPC1110/11/12/13/14/15 chip.
- The ADC input traces must be shielded from fast switching digital signals and noisy power supply lines.
- Because the ADC and the digital core share the same power supply, the power supply line must be adequately filtered.
- To improve the ADC performance in a very noisy environment, put the device in Sleep mode during the ADC conversion.

### 11.2 Use of ADC input trigger signals

For applications that use trigger signals to start conversions and require a precise sample frequency, ensure that the period of the trigger signal is an integral multiple of the period of the ADC clock.

### 11.3 XTAL input

The input voltage to the on-chip oscillators is limited to 1.8 V. If the oscillator is driven by a clock in slave mode, it is recommended that the input be coupled through a capacitor with  $C_i = 100$  pF. To limit the input voltage to the specified range, choose an additional capacitor to ground  $C_g$  which attenuates the input voltage by a factor  $C_i/(C_i + C_g)$ . In slave mode, a minimum of 200 mV (RMS) is needed.

**Fig 45. Slave mode operation of the on-chip oscillator**

In slave mode the input clock signal should be coupled by means of a capacitor of 100 pF ([Figure 45](#)), with an amplitude between 200 mV (RMS) and 1000 mV (RMS). This corresponds to a square wave signal with a signal swing of between 280 mV and 1.4 V. The XTALOUT pin in this configuration can be left unconnected.

External components and models used in oscillation mode are shown in [Figure 46](#) and in [Table 26](#) and [Table 27](#). Since the feedback resistance is integrated on chip, only a crystal and the capacitances  $C_{X1}$  and  $C_{X2}$  need to be connected externally in case of

fundamental mode oscillation (the fundamental frequency is represented by L, C<sub>L</sub> and R<sub>S</sub>). Capacitance C<sub>P</sub> in Figure 46 represents the parallel package capacitance and should not be larger than 7 pF. Parameters F<sub>OSC</sub>, C<sub>L</sub>, R<sub>S</sub> and C<sub>P</sub> are supplied by the crystal manufacturer (see Table 26).

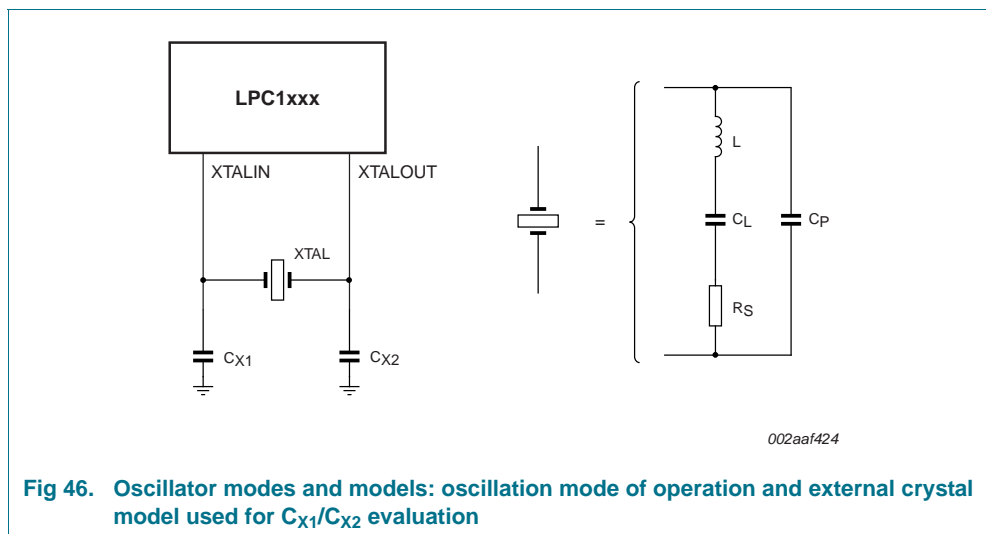

Fig 46. Oscillator modes and models: oscillation mode of operation and external crystal model used for C<sub>X1</sub>/C<sub>X2</sub> evaluation

Table 26. Recommended values for C<sub>X1</sub>/C<sub>X2</sub> in oscillation mode (crystal and external components parameters) low frequency mode

Fundamental oscillation frequency F <sub>OSC</sub>	Crystal load capacitance C <sub>L</sub>	Maximum crystal series resistance R <sub>S</sub>	External load capacitors C <sub>X1</sub> , C <sub>X2</sub>
1 MHz to 5 MHz	10 pF	< 300 Ω	18 pF, 18 pF
	20 pF	< 300 Ω	39 pF, 39 pF
	30 pF	< 300 Ω	57 pF, 57 pF
5 MHz to 10 MHz	10 pF	< 300 Ω	18 pF, 18 pF
	20 pF	< 200 Ω	39 pF, 39 pF
	30 pF	< 100 Ω	57 pF, 57 pF
10 MHz to 15 MHz	10 pF	< 160 Ω	18 pF, 18 pF
	20 pF	< 60 Ω	39 pF, 39 pF
15 MHz to 20 MHz	10 pF	< 80 Ω	18 pF, 18 pF

Table 27. Recommended values for C<sub>X1</sub>/C<sub>X2</sub> in oscillation mode (crystal and external components parameters) high frequency mode

Fundamental oscillation frequency F <sub>OSC</sub>	Crystal load capacitance C <sub>L</sub>	Maximum crystal series resistance R <sub>S</sub>	External load capacitors C <sub>X1</sub> , C <sub>X2</sub>
15 MHz to 20 MHz	10 pF	< 180 Ω	18 pF, 18 pF
	20 pF	< 100 Ω	39 pF, 39 pF
20 MHz to 25 MHz	10 pF	< 160 Ω	18 pF, 18 pF
	20 pF	< 80 Ω	39 pF, 39 pF

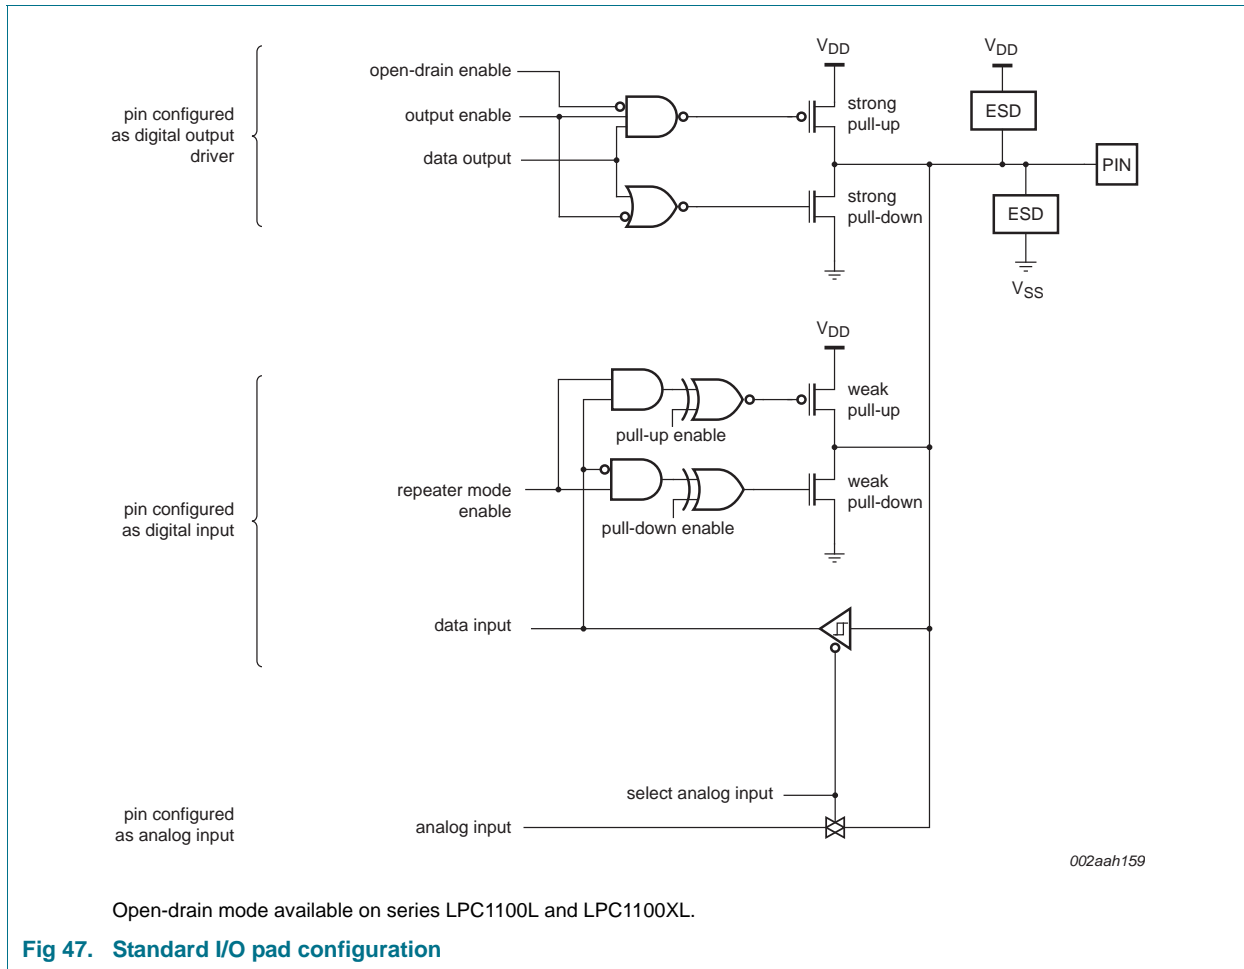

#### 11.4 XTAL Printed Circuit Board (PCB) layout guidelines

The crystal should be connected on the PCB as close as possible to the oscillator input and output pins of the chip. Take care that the load capacitors  $C_{X1}$ ,  $C_{X2}$ , and  $C_{X3}$  in case of third overtone crystal usage have a common ground plane. The external components must also be connected to the ground plane. Loops must be made as small as possible in order to keep the noise coupled in via the PCB as small as possible. Also parasitics should stay as small as possible. Values of  $C_{X1}$  and  $C_{X2}$  should be chosen smaller accordingly to the increase in parasitics of the PCB layout.

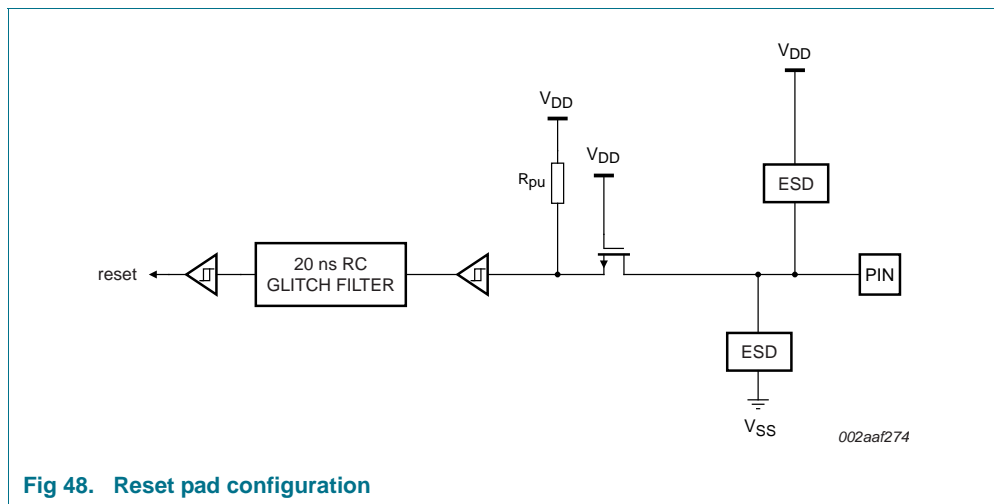

#### 11.5 Standard I/O pad configuration

[Figure 47](#) shows the possible pin modes for standard I/O pins with analog input function:

- Digital output driver
- Digital input: Pull-up enabled/disabled
- Digital input: Pull-down enabled/disabled
- Digital input: Repeater mode enabled/disabled
- Digital output: Pseudo open-drain mode enable/disabled
- Analog input

### 11.6 Reset pad configuration

## 11.7 ElectroMagnetic Compatibility (EMC)

Radiated emission measurements according to the IEC61967-2 standard using the TEM-cell method are shown for the LPC1114FBD48/302 in [Table 28](#).

**Table 28. ElectroMagnetic Compatibility (EMC) for part LPC1114FBD48/302 (TEM-cell method)**

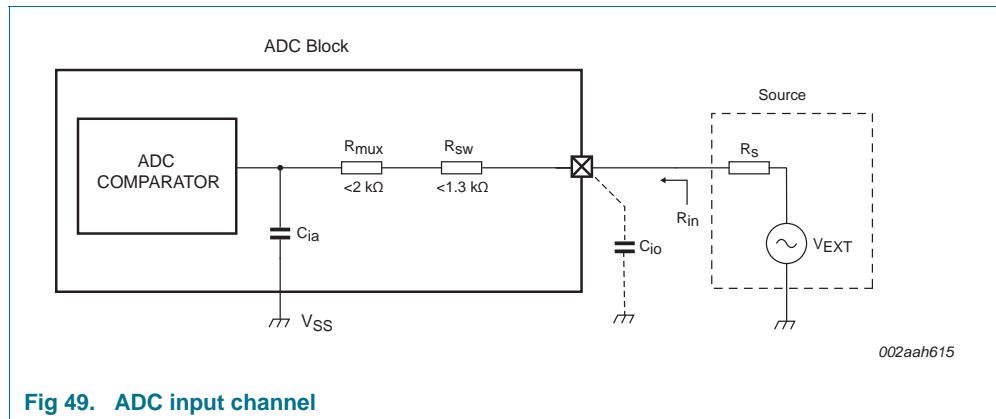

$V_{DD} = 3.3\text{ V}$ ;  $T_{amb} = 25\text{ °C}$ .

Parameter	Frequency band	System clock =			Unit
		12 MHz	24 MHz	48 MHz	
<b>Input clock: IRC (12 MHz)</b>					
maximum peak level	150 kHz to 30 MHz	-7	-5	-7	dB $\mu$ V
	30 MHz to 150 MHz	-2	1	10	dB $\mu$ V
	150 MHz to 1 GHz	4	8	16	dB $\mu$ V
IEC level <sup>[1]</sup>	-	O	N	M	-
<b>Input clock: crystal oscillator (12 MHz)</b>					
maximum peak level	150 kHz to 30 MHz	-7	-7	-7	dB $\mu$ V
	30 MHz to 150 MHz	-2	1	8	dB $\mu$ V
	150 MHz to 1 GHz	4	7	14	dB $\mu$ V
IEC level <sup>[1]</sup>	-	O	N	M	-

[1] IEC levels refer to Appendix D in the IEC61967-2 Specification.

## 11.8 ADC effective input impedance

A simplified diagram of the ADC input channels can be used to determine the effective input impedance seen from an external voltage source. See [Figure 49](#).

**Fig 49. ADC input channel**

The effective input impedance,  $R_{in}$ , seen by the external voltage source,  $V_{EXT}$ , is the parallel impedance of  $((1/f_s \times C_{ia}) + R_{mux} + R_{sw})$  and  $(1/f_s \times C_{io})$ , and can be calculated using [Equation 1](#) with

- $f_s$  = sampling frequency
- $C_{ia}$  = ADC analog input capacitance
- $R_{mux}$  = analog mux resistance
- $R_{sw}$  = switch resistance
- $C_{io}$  = pin capacitance

(1)

$$R_{in} = \left( \frac{1}{f_s \times C_{ia}} + R_{mux} + R_{sw} \right) \parallel \left( \frac{1}{f_s \times C_{io}} \right)$$

Under nominal operating condition  $V_{DD} = 3.3$  V and with the maximum sampling frequency  $f_s = 400$  kHz, the parameters assume the following values:

- $C_{ia} = 1$  pF (max)
- $R_{mux} = 2$  kΩ (max)
- $R_{sw} = 1.3$  kΩ (max)
- $C_{io} = 7.1$  pF (max)

The effective input impedance with these parameters is  $R_{in} = 308$  kΩ.

## 16. Legal information

### 16.1 Data sheet status

Document status <sup>[1][2]</sup>	Product status <sup>[3]</sup>	Definition
Objective [short] data sheet	Development	This document contains data from the objective specification for product development.
Preliminary [short] data sheet	Qualification	This document contains data from the preliminary specification.
Product [short] data sheet	Production	This document contains the product specification.

[1] Please consult the most recently issued document before initiating or completing a design.

[2] The term 'short data sheet' is explained in section "Definitions".

[3] The product status of device(s) described in this document may have changed since this document was published and may differ in case of multiple devices. The latest product status information is available on the Internet at URL <http://www.nxp.com>.

### 16.2 Definitions

**Draft** — The document is a draft version only. The content is still under internal review and subject to formal approval, which may result in modifications or additions. NXP Semiconductors does not give any representations or warranties as to the accuracy or completeness of information included herein and shall have no liability for the consequences of use of such information.

**Short data sheet** — A short data sheet is an extract from a full data sheet with the same product type number(s) and title. A short data sheet is intended for quick reference only and should not be relied upon to contain detailed and full information. For detailed and full information see the relevant full data sheet, which is available on request via the local NXP Semiconductors sales office. In case of any inconsistency or conflict with the short data sheet, the full data sheet shall prevail.

**Product specification** — The information and data provided in a Product data sheet shall define the specification of the product as agreed between NXP Semiconductors and its customer, unless NXP Semiconductors and customer have explicitly agreed otherwise in writing. In no event however, shall an agreement be valid in which the NXP Semiconductors product is deemed to offer functions and qualities beyond those described in the Product data sheet.

### 16.3 Disclaimers

**Limited warranty and liability** — Information in this document is believed to be accurate and reliable. However, NXP Semiconductors does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information. NXP Semiconductors takes no responsibility for the content in this document if provided by an information source outside of NXP Semiconductors.

In no event shall NXP Semiconductors be liable for any indirect, incidental, punitive, special or consequential damages (including - without limitation - lost profits, lost savings, business interruption, costs related to the removal or replacement of any products or rework charges) whether or not such damages are based on tort (including negligence), warranty, breach of contract or any other legal theory.

Notwithstanding any damages that customer might incur for any reason whatsoever, NXP Semiconductors' aggregate and cumulative liability towards customer for the products described herein shall be limited in accordance with the *Terms and conditions of commercial sale* of NXP Semiconductors.

**Right to make changes** — NXP Semiconductors reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. This document supersedes and replaces all information supplied prior to the publication hereof.

**Suitability for use** — NXP Semiconductors products are not designed, authorized or warranted to be suitable for use in life support, life-critical or safety-critical systems or equipment, nor in applications where failure or malfunction of an NXP Semiconductors product can reasonably be expected to result in personal injury, death or severe property or environmental damage. NXP Semiconductors and its suppliers accept no liability for inclusion and/or use of NXP Semiconductors products in such equipment or applications and therefore such inclusion and/or use is at the customer's own risk.

**Applications** — Applications that are described herein for any of these products are for illustrative purposes only. NXP Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Customers are responsible for the design and operation of their applications and products using NXP Semiconductors products, and NXP Semiconductors accepts no liability for any assistance with applications or customer product design. It is customer's sole responsibility to determine whether the NXP Semiconductors product is suitable and fit for the customer's applications and products planned, as well as for the planned application and use of customer's third party customer(s). Customers should provide appropriate design and operating safeguards to minimize the risks associated with their applications and products.

NXP Semiconductors does not accept any liability related to any default, damage, costs or problem which is based on any weakness or default in the customer's applications or products, or the application or use by customer's third party customer(s). Customer is responsible for doing all necessary testing for the customer's applications and products using NXP Semiconductors products in order to avoid a default of the applications and the products or of the application or use by customer's third party customer(s). NXP does not accept any liability in this respect.

**Limiting values** — Stress above one or more limiting values (as defined in the Absolute Maximum Ratings System of IEC 60134) will cause permanent damage to the device. Limiting values are stress ratings only and (proper) operation of the device at these or any other conditions above those given in the Recommended operating conditions section (if present) or the Characteristics sections of this document is not warranted. Constant or repeated exposure to limiting values will permanently and irreversibly affect the quality and reliability of the device.

**Terms and conditions of commercial sale** — NXP Semiconductors products are sold subject to the general terms and conditions of commercial sale, as published at <http://www.nxp.com/profile/terms>, unless otherwise agreed in a valid written individual agreement. In case an individual agreement is concluded only the terms and conditions of the respective agreement shall apply. NXP Semiconductors hereby expressly objects to applying the customer's general terms and conditions with regard to the purchase of NXP Semiconductors products by customer.

**No offer to sell or license** — Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.

**Export control** — This document as well as the item(s) described herein may be subject to export control regulations. Export might require a prior authorization from competent authorities.

**Non-automotive qualified products** — Unless this data sheet expressly states that this specific NXP Semiconductors product is automotive qualified, the product is not suitable for automotive use. It is neither qualified nor tested in accordance with automotive testing or application requirements. NXP Semiconductors accepts no liability for inclusion and/or use of non-automotive qualified products in automotive equipment or applications.

In the event that customer uses the product for design-in and use in automotive applications to automotive specifications and standards, customer (a) shall use the product without NXP Semiconductors' warranty of the product for such automotive applications, use and specifications, and (b)

whenever customer uses the product for automotive applications beyond NXP Semiconductors' specifications such use shall be solely at customer's own risk, and (c) customer fully indemnifies NXP Semiconductors for any liability, damages or failed product claims resulting from customer design and use of the product for automotive applications beyond NXP Semiconductors' standard warranty and NXP Semiconductors' product specifications.

<b>3</b>	<b>Applications</b> . . . . .	<b>3</b>	7.16.5.2	Sleep mode	52
<b>4</b>	<b>Ordering information</b> . . . . .	<b>3</b>	7.16.5.3	Deep-sleep mode	52
4.1	Ordering options	5	7.16.5.4	Deep power-down mode	52
<b>5</b>	<b>Block diagram</b> . . . . .	<b>7</b>	7.17	System control	52
<b>6</b>	<b>Pinning information</b> . . . . .	<b>9</b>	7.17.1	Start logic	52
6.1	Pinning	9	7.17.2	Reset	53
6.2	Pin description	16	7.17.3	Brownout detection	53
<b>7</b>	<b>Functional description</b> . . . . .	<b>42</b>	7.17.4	Code security (Code Read Protection - CRP)	53
7.1	ARM Cortex-M0 processor	42	7.17.5	APB interface	54
7.2	On-chip flash program memory	42	7.17.6	AHBLite	54
7.3	On-chip SRAM	42	7.17.7	External interrupt inputs	54
7.4	Memory map	42	7.18	Emulation and debugging	54
7.5	Nested Vectored Interrupt Controller (NVIC)	44	<b>8</b>	<b>Limiting values</b>	<b>55</b>
7.5.1	Features	44	<b>9</b>	<b>Static characteristics</b>	<b>56</b>
7.5.2	Interrupt sources	45	9.1	BOD static characteristics	63
7.6	IOCONFIG block	45	9.2	Power consumption LPC1100 series (LPC111x/101/201/301)	64
7.7	Fast general purpose parallel I/O	45	9.3	Power consumption LPC1100L series (LPC111x/002/102/202/302)	67
7.7.1	Features	45	9.4	Power consumption LPC1100XL series (LPC111x/103/203/303/323/333)	70
7.8	UART	46	9.5	CoreMark data	74
7.8.1	Features	46	9.6	Peripheral power consumption	75
7.9	SPI serial I/O controller	46	9.7	Electrical pin characteristics	76
7.9.1	Features	46	<b>10</b>	<b>Dynamic characteristics</b>	<b>79</b>
7.10	I <sup>2</sup> C-bus serial I/O controller	47	10.1	Power-up ramp conditions	79
7.10.1	Features	47	10.2	Flash memory	79
7.11	10-bit ADC	47	10.3	External clock	80
7.11.1	Features	47	10.4	Internal oscillators	81
7.12	General purpose external event counter/timers	48	10.5	I/O pins	82
7.12.1	Features	48	10.6	I <sup>2</sup> C-bus	83
7.13	System tick timer	48	10.7	SPI interfaces	84
7.14	Watchdog timer (LPC1100 series, LPC111x/101/201/301)	48	<b>11</b>	<b>Application information</b>	<b>87</b>
7.14.1	Features	48	11.1	ADC usage notes	87
7.15	Windowed WatchDog Timer (LPC1100L and LPC1100XL series)	49	11.2	Use of ADC input trigger signals	87
7.15.1	Features	49	11.3	XTAL input	87
7.16	Clocking and power control	49	11.4	XTAL Printed Circuit Board (PCB) layout guidelines	89
7.16.1	Crystal oscillators	49	11.5	Standard I/O pad configuration	89
7.16.1.1	Internal RC oscillator	50	11.6	Reset pad configuration	90
7.16.1.2	System oscillator	50	11.7	ElectroMagnetic Compatibility (EMC)	91
7.16.1.3	Watchdog oscillator	51	11.8	ADC effective input impedance	92
7.16.2	System PLL	51			
7.16.3	Clock output	51			
7.16.4	Wake-up process	51
