Quad Differential Line Driver

Separate Logic Bias and Driver Bias

With Tri-State Outputs

TECHNOLOGIES

## Data Sheet

### Description

These line drivers are pin compatible with 26LS31 in applications where pin 4 = 5V and pin 12 = GND. Internal clamp diodes allow trouble-free operation when driving cable lengths exceeding 100m. Split supplies are provided to minimize standby power dissipation in high voltage applications. The logic should be powered from a regulated 5V supply at the VccBias pin. The output stages may then be powered by a separate supply at VccDrivers, up to 30V. Output voltage swings of 0.3V to VCC-1.9V are typical. The outputs are protected against shorts to ground, shorts to Vcc and to other outputs, by a two-fold scheme of current limiting and thermal shutdown. This assures highly reliable operation in harsh environments.

This part is available in 16L SOIC (Pb-free) package.

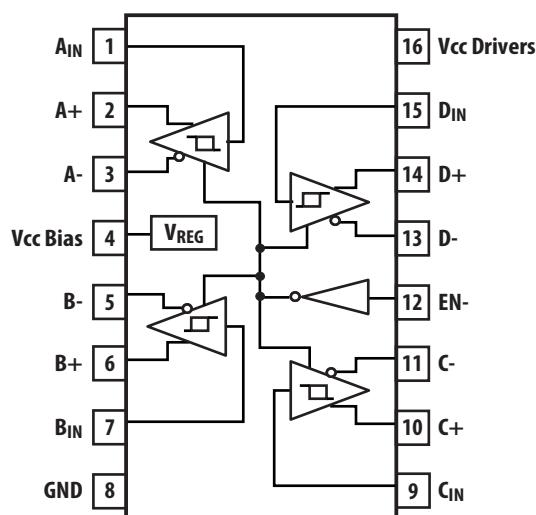

### Applications

- Encoders
- Industrial controls

### Features

- Supply (Bias) Voltage Range 3.5 V to 30 V
- Operation to 800 KHz
- CMOS and TTL Compatible Inputs
- Separate logic bias and driver supply pins
- Optional single supply operation for moderate power applications
- High Impedance Buffered Inputs with hysteresis
- Tri-State outputs
- 80 mA peak SINK/SOURCE current

### Notes:

1. Lead coplanarity should be 0 to 0.004" max.
2. Package surface finishing: VD1 24~27 (Dual).  
Package surface finishing: VD1 13~15 (16L Soic(NB) Matrix).
3. All dimension excluding mold flashes.
4. The lead width, B to be determined at 0.0075" from the lead tip.
