# 8-Channel Data Selector

The MC14512B is an 8-channel data selector constructed with MOS P-channel and N-channel enhancement mode devices in a single monolithic structure. This data selector finds primary application in signal multiplexing functions. It may also be used for data routing, digital signal switching, signal gating, and number sequence generation.

#### **Features**

- Diode Protection on All Inputs
- Single Supply Operation
- 3-State Output (Logic "1", Logic "0", High Impedance)
- Supply Voltage Range = 3.0 Vdc to 18 Vdc
- Capable of Driving Two Low-power TTL Loads or One Low-power Schottky TTL Load Over the Rated Temperature Range
- These Devices are Pb-Free and are RoHS Compliant

#### MAXIMUM RATINGS (Voltages Referenced to VSS)

| Parameter   | Symbol                             | Value                            | Unit |
|---|------------------------------------|----------------------------------|------|
| DC Supply Voltage Range                           | $V_{DD}$                           | -0.5 to +18.0                    | V    |
| Input or Output Voltage Range (DC or Transient)   | V <sub>in</sub> , V <sub>out</sub> | -0.5 to V <sub>DD</sub><br>+ 0.5 | ٧    |
| Input or Output Current (DC or Transient) per Pin | I <sub>in</sub> , I <sub>out</sub> | ±10                              | mA   |
| Power Dissipation, Per Package (Note 1)           | $P_{D}$                            | 500                              | mW   |
| Ambient Temperature Range                         | T <sub>A</sub>                     | -55 to +125                      | °C   |
| Storage Temperature Range                         | T <sub>stg</sub>                   | -65 to +150                      | °C   |
| Lead Temperature (8-Second Soldering)             | TL                                 | 260                              | °C   |

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

 Temperature Derating: Plastic "P and D/DW" Packages: – 7.0 mW/°C From 65°C To 125°C

This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high-impedance circuit. For proper operation,  $V_{in}$  and  $V_{out}$  should be constrained to the range  $V_{SS} \leq (V_{in} \text{ or } V_{out}) \leq V_{DD}$ .

Unused inputs must always be tied to an appropriate logic voltage level (e.g., either  $V_{SS}$  or  $V_{DD}$ ). Unused outputs must be left open.

To calculate total supply current at loads other than 50 pF: I<sub>T</sub>(C<sub>L</sub>) = I<sub>T</sub>(50 pF) + (C<sub>L</sub> – 50) Vfk where: I<sub>T</sub> is in μA (per package), C<sub>L</sub> in pF, V = (V<sub>DD</sub> – V<sub>SS</sub>) in volts, f in kHz is input frequency, and k = 0.001.

<sup>5.</sup> The formulas given are for the typical characteristics only at 25°C.6. Data labelled "Typ" is not to be used for design purposes but is intended as an indication of the IC's potential performance.

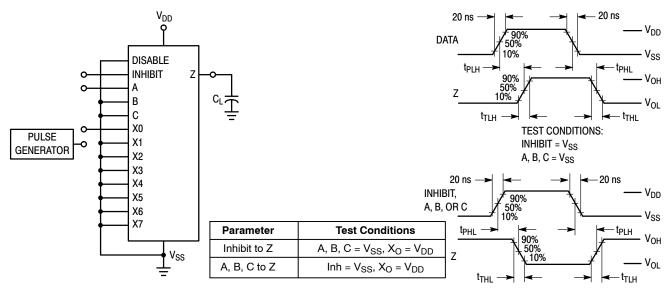

Figure 2. AC Test Circuit and Waveforms

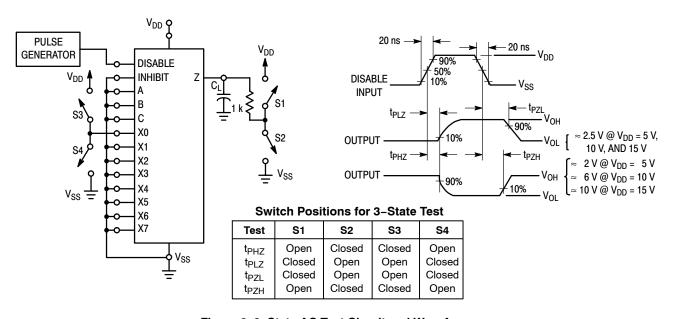

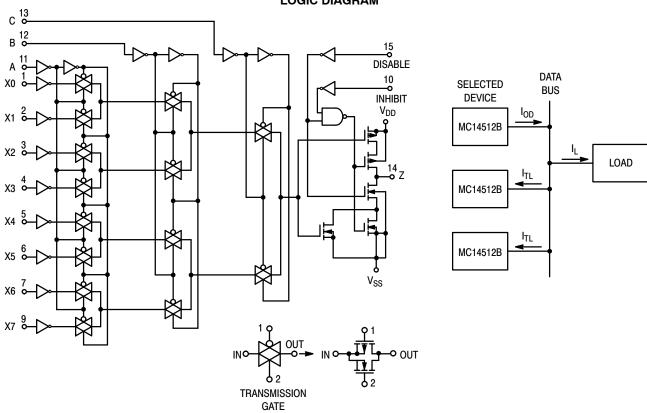

Figure 3. 3-State AC Test Circuit and Waveform

#### **LOGIC DIAGRAM**

#### 3-STATE MODE OF OPERATION

Output terminals of several MC14512B 8-Bit Data Selectors can be connected to a single date bus as shown. One MC14512B is selected by the 3-state control, and the remaining devices are disabled into a high-impedance "off" state. The number of 8-bit data selectors, N, that may be connected to a bus line is determined from the output drive current, I<sub>OD</sub>, 3-state or disable output leakage current, I<sub>TL</sub>, and the load current, I<sub>L</sub>, required to drive the bus line

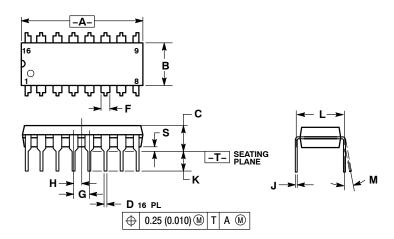

(including fanout to other device inputs), and can be calculated by:

$$N = \frac{I_{OD} - I_{L}}{I_{TL}} + 1$$

N must be calculated for both high and low logic state of the bus line.

#### **SOLDERING FOOTPRINT**

ON Semiconductor and 📖 are registered trademarks of Semiconductor Components Industries, LLC (SCILLC). SCILLC reserves the right to make changes without further notice to any products herein. SCILLC makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does SCILLC assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. "Typical" parameters which may be provided in SCILLC data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. SCILLC does not convey any license under its patent rights nor the rights of others. SCILLC products are not designed, intended, or authorized for use as components in systems intended for surgical implant into the body, or other applications intended to support or sustain life, or for any other application in which the failure of the SCILLC product could create a situation where personal injury or death may occur. Should Buyer purchase or use SCILLC products for any such unintended or unauthorized application, Buyer shall indemnify and hold SCILLC and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that SCILLC was negligent regarding the design or manufacture of the part. SCILLC is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.
