## 3.3V 1:2 Fanout Differential LVPECL/LVDS to LVTTTL Translator

### Description

The MC100EPT26 is a 1:2 Fanout Differential LVPECL/LVDS to LVTTTL translator. Because LVPECL (Positive ECL) or LVDS levels are used only +3.3 V and ground are required. The small outline 8-lead package and the 1:2 fanout design of the EPT26 makes it ideal for applications which require the low skew duplication of a signal in a tightly packed PC board.

The  $V_{BB}$  output allows the EPT26 to be used in a single-ended input mode. In this mode the  $V_{BB}$  output is tied to the  $\overline{D0}$  input for a non-inverting buffer or the D0 input for an inverting buffer. If used, the  $V_{BB}$  pin should be bypassed to ground with  $> 0.01 \mu\text{F}$  capacitor. For a single-ended direct connection, use an external voltage reference source such as a resistor divider. Do not use  $V_{BB}$  for a single-ended direct connection or port to another device.

### Features

- 1.4 ns Typical Propagation Delay
- Maximum Frequency  $> 275$  MHz Typical
- The 100 Series Contains Temperature Compensation
- Operating Range:  $V_{CC} = 3.0$  V to 3.6 V with  $GND = 0$  V
- 24 mA TTL outputs
- Q Outputs Will Default LOW with Inputs Open or at  $V_{EE}$
- $V_{BB}$  Output
- Pb-Free Packages are Available

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfpm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

3. Input parameters vary 1:1 with V<sub>CC</sub>.

4. V<sub>IHCMR</sub> min varies 1:1 with GND, V<sub>IHCMR</sub> max varies 1:1 with V<sub>CC</sub>. The V<sub>IHCMR</sub> range is referenced to the most positive side of the differential input signal.
