Positioning Product

Miniaturized GPS receiver for passive and active antennas

Many GPS applications, such as portable devices or telematics units, require a built-in antenna. However, an external antenna connector is often desired for GPS performance or reliability reasons. This is what the new A1084-A GPS receiver supports with its second antenna pin and on board antenna switch, whilst the A1084-B supports both passive and active antennas on a single antenna pin. This very compact SiRFStar III based GPS receiver comes completely shielded with a lid and with benchmark-setting GPS performance on a very small footprint.

Features Benefits

Bench marking sensitivity ■ -159 dBm tracking

Fasted TTFF (Time To First Fix) < 35 s under cold start condition (typical)

Smallest footprint 15 x 15 mm²

Antenna Passive and active antenna supported

Dual antenna support RF switch on A1084-A
