

OMRON

3G3MX2 AC Drives

Born to drive machines

» Omron Quality with a capital "Q"

» High programming functionality

» Built-in safety

Harmonized motor and machine control

The 3G3MX2 is specifically designed to drive machines. It has been developed to harmonize advanced motor and machine control.

Thanks to its advanced design and algorithms the 3G3MX2 provides smooth control down to zero speed, plus precise operation for fast cyclic operations and torque control capability in open loop.

The 3G3MX2 also gives you comprehensive functionality for machine control such as positioning, speed synchronization and logic programming. The 3G3MX2 is fully integrated within the Omron smart automation platform. The 3G3MX2 is the child of a true leader in machine automation.

MOTOR CONTROL

200% starting torque

- Near stand-still operation (0.5 Hz)
- Smooth control of high inertia loads
- Control of fast cyclic loads

Torque control in open loop

- Ideal for low to medium torque applications
- Can replace a flux vector or servo drive in suitable systems

Special motors

- Permanent magnet motors
- High speed motors up to 1000 Hz

One parameter auto-tuning

- Just by entering the power rating of the motor the 3G3MX2 gives you smooth and safe operation

Safety inside

- Conforms to safety norm ISO-13849 CAT3 performance level PLD
- 2 Safety inputs
- External device monitoring (EDM)

Logic programming

- Flow chart programming
- Intuitive – up to 5 tasks in parallel

Positioning

- Up to 8 pre-set positions with "Homing"
- Speed synchronization

Integrated in the Omron Smart Automation

- CX-Drive programming tool connected via integrated USB port on 3G3MX2.
- Modbus RS485 built-in
- Option units for EtherCAT, Profibus, DeviceNet, ML-II and more...

100% Control...

High starting torque and torque control capability in open loop mode give you full control of your machine dynamics and performance. Options for all of the major fieldbus systems and a 24 VDC external supply keeps you in full control of your machine operation.

Torque master

The 3G3MX2 delivers 200% starting torque near stand-still (0.5 Hz) and can operate in torque control in open loop mode. This allows the 3G3MX2 to be used in applications where closed loop AC vector drives were previously used.

Easy network integration

Built-in RS485 Modbus communications and the possibility for integration in standard industrial networks, such as DeviceNet, Profibus, CANopen, CompoNet, ML-II or EtherCat makes the 3G3MX2 exceptionally easy to integrate.

External 24 VDC for continuous operation

With no additional hardware, a 24 VDC connection to the 3G3MX2 ensures the CPU is always in control, even if the main input is removed. This feature is vital in providing a controlled stop in emergency situations and in keeping the network communications operating.

...0% risk!

Safety is embedded in the 3G3MX2, according to ISO 13849-1, Cat 3, with two safety inputs and an External Device Monitoring (EDM) output.

No external contactors on the motor side are required, meaning simpler wiring for the user.

Safety embedded; ISO 13849-1, cat 3

Dual contactors at the output of the inverter are no longer required. Direct connection to a safety controller ensures compliance to ISO 13849-1, cat 3.

EDM monitoring output

An External Device Monitoring (EDM) output confirms the safety status of the inverter, saving you the cost and wiring of external devices to carry out the same function.

Direct integration into the safety circuit

3G3MX2 inverters can fit easily into the safety circuit. The safety inputs can be linked from one inverter to another without additional safety relays.

Position and run!

The 3G3MX2 is a drive and position controller in one, ideal for modular machines where moderate positional accuracy is required. Speed synchronization is also possible, with no additional programming required.

Speed synchronization

With no external hardware required, and via standard parameter settings, speed synchronization can be achieved. The 3G3MX2 will act as a speed follower to an external pulse generator/ encoder signal up to 32 kHz.

Positioning functionality

Specially developed application functionality enables the 3G3MX2 to solve simple positioning tasks without the need for an external controller. Up to 8 positions, plus home, can be selected by the user, and furthermore, the 3G3MX2 can be switched between speed and position mode.

Program and play!

The 3G3MX2 gives you the power to create smart solutions using PLC functionality, as standard. Via an intuitive flow chart programming tool, you can create programs with up to 1000 lines of code and with 5 tasks running in parallel.

Free to program

- Intuitive and user friendly flow chart programming
- Integrated in CX-Drive
- Up to 1000 lines in a program
- 5 tasks can run in parallel

3G3MX2

Born to drive machines

- Current vector control
- High starting torque: 200% at 0.5Hz
- Double rating VT 120%/1min and CT 150%/1min
- Speed range up to 1000 Hz
- IM & PM motor control
- Torque control in open loop vector
- Positioning functionality
- Built-in application functionality (i.e., Brake control)
- User programmable as standard
- Safety embedded compliant with ISO13849-1 (double input circuit and external device monitor EDM)
- USB port for PC programming
- 24 VDC backup supply for control board
- Fieldbus communications: Modbus, DeviceNet, Profibus, Componet, EtherCAT, ML-II and CanOpen
- PC configuration tool: CX-Drive
- RoHS, CE, cULus

Ratings

- 200 V Class single-phase 0.1 to 2.2 kW (1/8 to 3 HP)
- 200 V Class three-phase 0.1 to 15.0 kW (1/8 to 20 HP)
- 400 V Class three-phase 0.4 to 15.0 kW (1/2 to 20 HP)

Specifications

Common specifications

| Model number 3G3MX2-□ | Specifications |
|-----------------------|---|
| Control functions | Control methods Phase-to-phase sinusoidal pulse with modulation PWM (Sensorless vector control, V/F) |
| | Output frequency range 0.10 to 1000.00 Hz (with restrictions above 400Hz) |
| | Frequency precision Digital set value: $\pm 0.01\%$ of the max. frequency |
| | Analog set value: $\pm 0.2\%$ of the max. frequency (25 $\pm 10^\circ\text{C}$) |
| | Resolution of frequency set value Digital set value: 0.01 Hz |
| | Analog set value: 1/1000 of maximum frequency |
| | Resolution of output frequency 0.01 Hz |
| | Starting torque 200% / 0.5 Hz |
| | Overload capability Dual rating: Heavy duty (CT): 150% for 1 minute Normal Duty (VT): 120% for 1 minute |
| | Frequency set value 0 to 10 VDC (10K Ω), 4 to 20mA (100 Ω), RS485 Modbus, Network options |
| Functionality | V/f Characteristics Constant/ reduced torque, free V/f |
| | Inputs signals FW (forward run command), RV (reverse run command), CF1~CF4 (multi-stage speed setting), JG (jog command), DB (external braking), SET (set second motor), 2CH (2-stage accel./decel. command), FRS (free run stop command), EXT (external trip), USP (startup function), CS (commercial power switchover), SFT (soft lock), AT (analog input selection), RS (reset), PTC (thermistor thermal protection), STA (start), STP (stop), F/R (forward/reverse), PID (PID disable), PIDC (PID reset), UP (remote control up function), DWN (remote control down function), UDC (remote control data clear), OPE (operator control), SF1~SF7 (multi-stage speed setting; bit operation), OLR (overload restriction), TL (torque limit enable), TRQ1 (torque limit changeover1), TRQ2 (torque limit changeover2), BOK (Braking confirmation), LAC (LAD cancellation), PCLR (position deviation clear), ADD (add frequency enable), F-TM (force terminal mode), ATR (permission of torque command input), KHC (Cumulative power clear), MI1~MI7 (general purpose inputs for EzSQ), AHD (analog command hold), CP1~CP3 (multistage position switches), ORL (limit signal of zero-return), ORC (trigger signal of zero-return), SPD (speed/position changeover), GS1~GS2 (STO inputs, safety related signals), 485 (Starting communication signal), PRG (executing EzSQ program), HLD (retain output frequency), ROK (permission of run command), EB (rotation direction detection of B-phase), DISP (display limitation), OP (option control signal), NO (no function) |
| | Output signals RUN (run signal), FA1~FA5 (frequency arrival signal), OL,OL2 (overload advance notice signal), OD (PID deviation error signal), AL (alarm signal), OTO (over/under torque threshold), UV (under-voltage), TRQ (torque limit signal), RNT (run time expired), ONT (power ON time expired), THM (thermal warning), BRK (brake release), BER (brake error), ZS (0Hz detection), DSE (speed deviation excessive), POK (positioning completion), ODc (analog voltage input disconnection), OIc (analog current input disconnection), FBV (PID second stage output), NDC (network disconnect detection), LOG1~LOG3 (Logic output signals), WAC (capacitor life warning), WAF (cooling fan warning), FR (starting contact), OHF (heat sink overheat warning), LOC (Low load), MO1~MO3 (general outputs for EzSQ), IRDY (inverter ready), FWR (forward operation), RVR (reverse operation), MJA (major failure), WCO (window comparator O), WCOI (window comparator OI), FREF (frequency command source), REF (run command source), SETM (second motor in operation), EDM (STO (safe torque off) performance monitor), OP (option control signal), NO (no function) |
| | Standard functions Free-V/f, manual/automatic torque boost, output voltage gain adjustment, AVR function, reduced voltage start, motor data selection, auto-tuning, motor stabilization control, reverse running protection, simple position control, simple torque control, torque limiting, automatic carrier frequency reduction, energy saving operation, PID function, non-stop operation at instantaneous power failure, brake control, DC injection braking, dynamic braking (BRD), frequency upper and lower limiters, jump frequencies, curve accel and decel (S, U, inverted U, EL-S), 16-stage speed profile, fine adjustment of start frequency, accel and decel stop, process jogging, frequency calculation, frequency addition, 2-stage accel/decel, stop mode selection, start/end freq., analog input filter, window comparators, input terminal response time, output signal delay/hold function, rotation direction restriction, stop key selection, software lock, safe stop function, scaling function, display restriction, password function, user parameter, initialization, initial display selection, cooling fan control, warning, trip retry, frequency pull-in restart, frequency matching, overload restriction, over current restriction, DC bus voltage AVR |
| | Analog inputs 2 analog inputs 0 to 10 V (10 K Ω), 4 to 20mA (100 Ω) |
| | Pulse train input terminal 0 to 10 V (up to 24 V), up to 32 KHz |
| | Accel/Decel times 0.01 to 3600.0 s (line/curve selection), 2nd accel/decel setting available |
| | Display Status indicator LED's Run, Program, Power, Alarm, Hz, Amps Digital operator: Available to monitor 32 items: frequency reference, output current, output frequency... |
| Protection functions | Motor overload protection Electronic Thermal overload relay and PTC thermistor input |
| | Instantaneous overcurrent 200% of rated current |
| | Overload Dual rating: Heavy duty (CT): 150% for 1 minute Normal Duty (VT): 120% for 1 minute |
| | Overvoltage 800 V for 400 V type and 400 V for 200 V type |
| | Undervoltage 345 V for 400 V type and 172.5 V for 200 V type |
| | Momentary power loss Following items are selectable: Alarm, decelerates to stop, decelerates to stop with DC bus controlled, restart |
| | Cooling fin overheat Temperature monitor and error detection |
| | Stall prevention level Stall prevention during acceleration/deceleration and constant speed |
| | Ground fault Detection at power-on |
| Ambient conditions | Power charge indication On when power is supplied to the control part |
| | Degree of protection IP20, Varnish coating on PCB |
| | Ambient humidity 90% RH or less (without condensation) |
| | Storage temperature -20 °C to +65 °C (short-term temperature during transportation) |
| | Ambient temperature -10°C to 40°C |
| | Installation Indoor (no corrosive gas, dust, etc.) |
| | Installation height Max. 1000 m |
| Vibration | 5.9 m/s ² (0.6G), 10 to 55 Hz |

FIGURE 3

FIGURE 4

Standard Connections

Note 1: Connect a single-phase 200 V AC input to terminals L1 and N.

Note 2: Factory default settings for relay output are NC contact for MA and NO contact for MB.

Main Circuit Terminals

| R/L1, S/L2, T/L3 | Main power supply input terminal | Connect the input AC power supply. Drives with 1-phase 200 V input power supply use only terminals L1 and N. |
|------------------|---|--|
| U/T1, V/T2, W/T3 | Inverter output terminal | Used to connect a 3-phase motor. |
| +1, P/+2 | DC Reactor connection terminal | Remove the shorting bar between terminals +1 and p/+2, and connect the optional DC reactor. |
| P/+2, RB | Braking Resistor connection terminal | Connect optional braking resistors. (If a braking torque is required.) |
| P/+2, N/- | Regenerative Braking unit connection terminal | Connect optional regenerative braking units. (When braking torque is required or the built-in braking circuit is not sufficient.) |
| | Ground terminal | This is a ground terminal. Connect this terminal to the ground. Provide Class D grounding for 200 V class models, and class C grounding for 400 V class models. On 200 V class models of 3.7 kW (5 HP) or below and 400 V class models of 4.0 kW (5 HP) or below, the ground terminal is located on the cooling fin. |

Control Circuit Terminals

| Terminal symbol | | Terminal name | Description | Specifications |
|----------------------|-------------------------|----------------|--|--|
| Analog | Power supply | SC | Input signal common | This is a common terminal used by the internal power supply, digital input and analog input/output terminals. |
| | | FS | Frequency reference power supply | 10 VDC power supply for the FV terminal. Allowable max. current: 7 mA |
| | Frequency setting input | FV | Frequency reference input terminal (analog voltage input) | Use this terminal if the frequency reference is provided by 0 to 10 VDC voltage input. Input impedance Approx. 10 kΩ Allowable input voltage range -0.3 to +12 VDC |
| | | FI | Frequency reference terminal (analog current input) | Use this terminal if the frequency reference is provided by 4 to 20 mA current input. Input impedance 100 Ω Allowable input range 0 to 24 mA |
| | Sensor input | S5/TH | External thermistor input (also used as multi-function input terminal) | Connect an external thermistor between the SCs, to trip the Inverter when a temperature error occurs. (The inverter will trip when the input from thermistor is approx. 3 kΩ or higher.) Since this input is also used as the multifunction input terminal, setting of C005 is required. PTC type |
| Digital | Output | AM | Multi-function analog output (voltage) | Specified signals can be output using voltage signals of 0 to 10 VDC. AM |
| | Power supply | SC | Input signal common | This is a common terminal used by the internal power supply, digital input and analog input/output terminals. |
| | | P24 | Power supply terminal for input signal | 24 VDC power supply for contact input signal. This is used as a common terminal if the source logic is input. Allowable max. current: 100 mA |
| | | PSC | Power supply terminal for input terminal | Sink logic input: Shorted with P24 Source logic input: Shorted with SC To drive the contact input using an external power supply, remove the shorting bar. |
| | Input | Contact | S7/EB S6 S5/TH S4/GS2 S3/GS1 S2 S1 | Multi-function input terminal Select 7 functions from among 59, and allocate them to terminals S1 through S7/EB. Both sink and source logics are supported. |
| | | | S4/GS2 S3/GS1 | Safety input Enabled when the safety function selector switch is turned ON. Voltage between each input and PSC ON voltage: 18 V min. OFF voltage: 3 V max. Allowable max. voltage: 27 VDC Load current: 5 mA (at 24 V) |
| | Input | Pulse | RP | Pulse input-A A pulse input for frequency setting. (Take note that the internal circuit is different from input terminals S7/EB.) Input pulse 32 kHz max. Voltage between input and SC ON voltage: 4 V min. OFF voltage: 1 V max. Allowable max. voltage: 27 VDC |
| | | | S7/EB | Pulse input-B A pulse input for frequency setting. (Take note that the internal circuit is different from input terminal RP) Input pulse 1.8 kHz max. ON voltage: 18 V min. OFF voltage: 3 V max. Allowable max. voltage: 27 VDC Load current: 5 mA (at 24 V) |
| | Output | Open collector | P1/EDM P2 | Multi-function output terminal Select 2 functions from among 43, and allocate them to terminals P1 through P2. Both sink and source logics are supported. |
| | | | P1/EDM | Safety monitor Enabled when the EDM function selector switch is ON. Open collector output Between each terminal and PC Allowable max. voltage: 27 V Allowable max. current: 50 mA Voltage drop when ON: 4 V max. |
| | | Relay | MA MB | Relay output terminal Select the desired functions from among 43 functions, and allocate them to these terminals. SPDT contact. The factory default of Relay Output (MA, MB) Contact Selection (C036) is NC contact between MA-MC, and NO contact between MB-MC. Max. contact capacity MA-MC: 250 VAC, 2 A (resistance) 0.2 A (induction) MB-MC: 250 VAC, 1 A (resistance) 0.2 A (induction) Contact min. capacity 100 VAC, 10mA 5 VDC, 100 mA |
| | Pulse | MP | Pulse output | Pulses are output. Output pulse: 32 kHz max. Output voltage: 10 VDC Allowable max. current: 2 mA |
| Serial communication | | RS+ RS- | Modbus port (RS-485) | RS-485 port RS+ RS-485 differential (+) signal RS- RS-485 differential (-) signal Max. speed: 115.2 kbps Built-in Terminal Resistor: 200 Ω Slide switch selection |

Ordering Information

② Accessories

| Types | Model | Description | Functions |
|------------------|-------------------|------------------------|--|
| Digital operator | 3G3AX-OP05 | LCD remote operator | 5 Line LCD remote operator with copy function, cable length max. 3m. |
| | 3G3AX-CAJOP300-EE | Remote operator cable | 3 meters cable for connecting remote operator |
| Accessories | 3G3AX-CUSBM002-E | PC configuration cable | Mini USB to USB connector cable |

③ Communication option boards

| Types | Model | Description | Functions |
|-----------------------|----------------|-----------------------------|--|
| Communication options | 3G3AX-MX2-PRT | Profibus option card | Used for running or stopping the inverter, setting or referencing parameters, and monitoring output frequency, output current, or similar items through Profibus communications with the host controller. |
| | 3G3AX-MX2-DRT | DeviceNet option card | Used for running or stopping the inverter, setting or referencing parameters, and monitoring output frequency, output current, or similar items through DeviceNet communications with the host controller. |
| | 3G3AX-MX2-ERT | Ethercat option card | Under development |
| | 3G3AX-MX2-CRT | CompoNet option card | Used for running or stopping the inverter, setting or referencing parameters, and monitoring output frequency, output current, or similar items through CompoNet communications with the host controller. |
| | 3G3AX-MX2-ML2 | Mechatrolink II option card | Under development |
| | 3G3AX-MX2-CORT | CanOpen option card | Under development |

④ Braking Unit, Braking Resistor Unit

Ordering Information

⑤ Computer Software

| Item | Description | Functions |
|----------|-------------------------------------|---|
| CX-Drive | AC Drive/Servo Programming software | Set, transfer and compare parameters; perform test runs and adjustment; perform monitoring and data tracing for Omron inverters and servos included in CX-One software. |
| CX-One | All-in-one Automation software | Program, configure and simulate operations for PLCs, HMIs, networks, motion control systems, temperature and process controllers. |

Note: Software runs on the following OS: Windows 2000 (Service Pack 3a or higher), XP, Vista or Windows 7.

ALL DIMENSIONS SHOWN ARE IN MILLIMETERS.
 To convert millimeters into inches, multiply by 0.03937. To convert grams into ounces, multiply by 0.03527.

Specifications are subject to change without notice.

Authorized Distributor:

Automation Systems

- Programmable logic controllers (PLC) • Human machine interfaces (HMI) • Remote I/O
- Industrial PC's • Software

Motion & Drives

- Motion controllers • Servo systems • AC drives

Control Components

- Temperature controllers • Power supplies • Timers • Counters • Programmable relays
- Digital panel indicators • Electromechanical relays • Monitoring products • Solid-state relays
- Limit switches • Pushbutton switches • Low voltage switch gear

Sensing & Safety

- Photoelectric sensors • Inductive sensors • Capacitive & pressure sensors
- Cable connectors • Displacement & width-measuring sensors • Vision systems
- Safety networks • Safety sensors • Safety units/relay units • Safety door/guard lock switches
