# OMRON

Modular Temperature Controller
EJ1

In-panel Temperature Controller with Flexible Modular Design and Wide Integration with Host Devices

- The compact modular structure enables construction of temperature systems optimally suited to the application.
- Connection can be made to a Programmable Controller without any programming required, reducing the number of steps required in ladder programming design.
- One fully universal-input Unit includes a thermocouple, platinum-resistance thermometer, and analog input for easy selection and reduced inventory requirements.
- Connect directly to the G3ZA Multi-channel Power Controller using optimum cycle control for high-accuracy regulation with minimal noise.
- Autotuning (AT) can be used for independent heating/cooling PID control, and self-tuning (ST) can be used to calculate the PID constants with the step response method.
- Up to 16 Temperature Controllers can be connected to a single DeviceNet Communications Unit.

CE c**RU**us
Supports DeviceNet Communications.

⚠ Refer to the *Safety Precautions* on page 21.

Ordering Information

■ Temperature Controller
Standard Control Models

Name	Power supply voltage	No. of control points	Control outputs 1 and 2	Control outputs 3 and 4	Auxiliary output	Functions		Communications functions	Input type	Terminal	Model
						Heater burnout alarm	Event inputs				
Basic Unit (temperature control) (See note 1.) V1.2	24 VDC supplied from the End Unit	2	Voltage output: 2 points (for SSR drive) (See note 2.)	Transistor output: 2 points (sinking)	None	2 (See note 3.)	2	G3ZA connection port: RS-485 From End Unit: Port A or port B: RS-485	Thermocouple, platinum resistance thermometer, analog voltage, and analog current selectable for each channel.	M3 terminal	EJ1N-TC2A-QNHB
										Screw-less clamp	EJ1N-TC2B-QNHB
		4	Voltage output: 2 points (for SSR drive) (See note 2.)			None	None			M3 terminal	EJ1N-TC4A-QQ
										Screw-less clamp	EJ1N-TC4B-QQ
		2	Current output: 2 points	Transistor output: 2 points (sinking)			2			M3 terminal	EJ1N-TC2A-CNB
										Screw-less clamp	EJ1N-TC2B-CNB
HFU with Programless Communications (See note 1.) V1.2		None	None	None	Transistor output: 4 points (sinking)		4	Port C: RS-485 or RS-232C selectable. From End Unit: Port A: RS-485	No input	M3 terminal	EJ1N-HFUA-NFLK
										Screw-less clamp	EJ1N-HFUB-NFLK
								Port C: RS-422 From End Unit: Port A: RS-485		M3 terminal	EJ1N-HFUA-NFL2
										Screw-less clamp	EJ1N-HFUB-NFL2
HFU with DeviceNet Communications (See note 1.)					None		None	DeviceNet communications		Screw-less clamp	EJ1N-HFUB-DRT
End Unit (See note 1.)	24 VDC				Transistor output: 2 points (sinking)		None	Port A or B: RS-485 Connector: Port A		M3 terminal	EJ1C-EDUA-NFLK
										Detachable connector	EJ1C-EDUC-NFLK

Note:
1. An End Unit is always required for connection to a Basic Unit or an HFU. An HFU cannot operate without a Basic Unit. External communications cannot be performed when using a Basic Unit only.
2. For heating/cooling control applications, control outputs 3 and 4 on the 2-point models are used for the cooling or heating control outputs. On the 4-point models, heating/cooling control is performed for the two input points.
3. When using the heater burnout alarm, purchase a Current Transformer (E54-CT1 or E54-CT3) separately.

Functional Upgrades

Refer to page 18 for details.
Upgrade functions are supported by the indicated version ("V1.1" or "V1.2") or a higher version of the software.

■ Ratings

Item Type	EJ1N-TC4	EJ1N-TC2
Power supply voltage	24 VDC	
Operating voltage range	85% to 110% of rated voltage	
Power consumption	5 W max. (at maximum load)	4 W max. (at maximum load)
Input (See note.)	Thermocouple: K, J, T, E, L, U, N, R, S, B, W, PLII ES1B Infrared Thermosensor: 10 to 70°C, 60 to 120°C, 115 to 165°C, 140 to 260°C Analog input: 4 to 20 mA, 0 to 20 mA, 1 to 5 V, 0 to 5 V, 0 to 10 V Platinum resistance thermometer: Pt100, JPt100	
Input impedance	Current input: 150 Ω max., voltage input: 1 MΩ min.	
Control outputs — Voltage output	Output voltage: 12 VDC ±15%, max. load current: 21 mA (PNP models with short-circuit protection circuit)	
Control outputs — Transistor output	---	Max. operating voltage: 30 V, max. load current: 100 mA
Control outputs — Current output	---	Current output range: 4 to 20 mA or 0 to 20 mA DC Load: 500 Ω max. (including transfer output) (Resolution: Approx. 2,800 for 4 to 20 mA DC, approx. 3,500 for 0 to 20 mA DC)
Event inputs — Input points	---	2
Event inputs — Contact input	---	ON: 1 kΩ max., OFF: 100 kΩ min.
Event inputs — Non-contact input	---	ON: Residual voltage: 1.5 V max., OFF: Leakage current: 0.1 mA max.
	---	Outflow current: Approx. 4 mA per point
Number of input and control points	Input points: 4, Control points: 4	Input points: 2, Control points: 2
Setting method	Via communications	
Control method	ON/OFF control or 2-PID (with autotuning, self-tuning) V1.2	
Other functions	Two-point input shift, digital input filter, remote SP, SP ramp, manual manipulated variable, manipulated variable limiter, interference overshoot adjustment, loop burnout alarm, RUN/STOP, banks, I/O allocations, etc.	
Ambient temperature range	Operating: −10°C to 55°C, Storage: −25°C to 65°C (with no icing or condensation)	
Ambient humidity range	Operating: 25% to 85% (with no condensation)	

Note: Inputs are fully universal. Therefore, platinum resistance thermometer, thermocouple, infrared thermosensor, and analog input can be selected.

■ Characteristics

Indication accuracy	Thermocouple input/platinum resistance thermometer input: (±0.5% of indication value (PV) or ±1°C, whichever is greater) ±1 digit max. (See note 1.)	
	Analog input: ±0.5% FS ±1 digit max.	
	CT input: ±5% FS ±1 digit max.	
Hysteresis	0.1 to 999.9 EU (in units of 0.1 EU) (See note 2.)	
Proportional band (P)	0.1 to 999.9 EU (in units of 0.1 EU) (See note 2.)	
Integral time (I)	0 to 3,999 s (in units of 1 s)	
Derivative time (D)	0.0 to 999.9 s (in units of 0.1 s)	
Control period	0.5 s, 1 to 99 s (in units of 1 s)	
Manual reset value	0.0% to 100.0% (in units of 0.1%)	
Alarm setting range	−1,999 to 9,999 (decimal point position depends on input type)	
Sampling period	250 ms	
Influence of signal source resistance	Thermocouple: 0.1°C (0.2°F)/Ω max. (100 Ω max per line) (See note 3.)	
	Platinum resistance thermometer: 0.4°C (0.8°F)/Ω max. (10 Ω max per line)	
Insulation resistance	20 MΩ min. (at 500 VDC)	
Dielectric strength	600 VAC, 50/60 Hz for 1 min between current-carrying terminals of different polarity	
Vibration resistance	10 to 55 Hz, 20 m/s^2 for 2 hours each in X, Y, and Z directions	
Shock resistance	150 m/s^2, 3 times each in 6 directions	
Weight	180 g	
Degree of protection	Rear case: IP20, Terminal section: IP00	
Memory protection	EEPROM (non-volatile memory) (number of writes: 100,000)	
Standards	**Approved standards**	UL61010C-1, CSA C22.2 No.1010-1
	Conformed standards	EN61010-1 (IEC61010-1): Pollution level 2, overvoltage category II
EMC Directive	EMI: EN61326	
	EMI Radiated: EN55011 Group1 class A	
	EMI Conducted: EN55011 Group1 class A	
	EMS: EN61326	
	ESD Immunity: EN61000-4-2	
	Electromagnetic Field Immunity: EN61000-4-3	
	Burst immunity/Noise Immunity: EN61000-4-4	
	Conducted Disturbance Immunity: EN61000-4-6	
	Surge Immunity: EN61000-4-5	
	Power Frequency Magnetic Field Immunity: EN61000-4-8	

Note: 1. The indication of K thermocouples in the −200 to 1,300°C range, T and N thermocouples at a temperature of −100°C or less, and U and L thermocouples at any temperature is ±2°C ±1 digit maximum. The indication of B thermocouples at a temperature of 400°C or less is unrestricted. The indication of R and S thermocouples at a temperature of 200°C or less is ±3°C ±1 digit max.
W = (±0.5% of indication value (PV) or ±3°C, whichever is greater) ±1 digit max. PLII = (±0.5% of indication value (PV) or ±2°C, whichever is greater) ±1 digit max.
The indication accuracy for K thermocouples in the −199.9 to 999.9°C range V1.2 is (±0.5% of indication value (PV) or ±1°C, whichever is greater) ±10 digit maximum. However, at a temperature of -100°C or less, it is ±2°C ±10 digit maximum.

2. "EU" stands for Engineering Unit. The location of the decimal point depends on the type of sensor that is selected.
If the decimal point locations is set to 0 (****), however, it will be treated as if it were set to 1 (***.*).

3. B, R, S, and W sensors: 0.2°C/Ω max. (100 Ω max.)

OMRON

■ Communications Specifications

Item	Port B (See note 1.)	Port A Terminal/ Port A Connector (See note 1.)	G3ZA Connection Port (See note 2.)
Transmission path connection	RS-485 (multipoint)		
Communications method	RS-485 (two-wire, half duplex)		
Synchronization method	Start-stop synchronization		
Communications protocol	CompoWay/F, Modbus (See note 4.) `V1.1`	CompoWay/F	
Baud rate	9.6, 19.2, 38.4, 57.6, or 115.2 kbps	38.4 kbps fixed	57.6 kbps fixed
Transmission code	CompoWay/F: ASCII, Modbus: RTU	CompoWay/F: ASCII	
Data bit length	7 or 8 bits	7 bits	
Stop bit length	1 or 2 bits	2 bits	
Error detection	Vertical parity (none, even, or odd)	Vertical parity (even)	
	Block check character (BCC): with CompoWay/F, CRC-16: (with Modbus)		
Flow control	None		
Interface	RS-485		
Retry function	None		
Communications response wait time	0 to 99 ms (default: 5 ms) `V1.1`	1 to 99 ms (default: 1 ms)	---
Number of Units that can be connected in parallel (See note 3.)	64 Units (model numbers with TC4: 256 channels, model numbers with TC2: 128 channels) Communications connection via port B on the End Unit	64 Units (model numbers with TC4: 256 channels, model numbers with TC2: 128 channels) Communications connection via port A on the End Unit	8 Units (Communications connection via G3ZA port on the Basic Unit)

Note: 1. Connection from the EJ1C-EDU. When using an HFU, port B on the End Unit can be used for distributed placement only.
    2. A special cable (EJ1C-CBLA050) must be purchased separately for the G3ZA connection.
    3. For the number of Units that can be connected, refer to *Connection Precautions* on page 11.
    4. The Modbus protocol can be used with Basic Unit with version 1.1 or higher.

■ Current Transformer (CT) Rating

Dielectric strength	1,000 VAC for 1 min
Vibration resistance	50 Hz, 98 m/s^2
Weight	E54-CT1: Approx. 11.5 g, E54-CT3: Approx. 50 g
Accessories (E54-CT3 only)	Armatures (2), plugs (2)

■ Characteristics of the Heater Burnout Alarm, SSR Failure Alarm, and Heater Overcurrent Alarm (TC2□-QNHB Model Only)

Maximum heater current	100 VAC
Input current indication accuracy	±5%FS ±1 digit max.
Heater burnout alarm setting range	0.1 to 99.9 A (in units of 0.1 A) 0.0 A: Heater burnout alarm output turns OFF. 100.0 A: Heater burnout alarm output turns ON. Min. detection ON time: 100 ms (See note 1.)
SSR failure alarm setting range	0.1 to 99.9 A (in units of 0.1 A) 0.0 A: SSR failure alarm output turns ON. 100.0 A: SSR alarm output turns OFF. Min. detection OFF time: 100 ms (See note 2.)
Heater overcurrent alarm setting range	0.1 to 99.9 A (in units of 0.1 A) 0.0 A: Heater overcurrent alarm output turns ON. 100.0 A: Heater overcurrent alarm output turns OFF. Min. detection ON time: 100 ms (See note 1.)

Note: 1. When the control output ON time is less than 100 ms, heater burnout detection, heater overcurrent detection, and heater current measurement are not performed.
    2. When the control output OFF time is less than 100 ms, SSR failure alarm and leakage current measurement are not performed.

■ Input Ranges

Sensor inputs are fully universal. Therefore, platinum resistance thermometer, thermocouple, infrared thermosensor, and analog input can be selected.
Inputs can be set for each channel using universal inputs.

Input type	Platinum resistance thermometer			
Name	**Pt100**		**JPt100**	
Temperature range (°C)	−200 to 850	−199.9 to 500.0	0.0 to 100.0	−199.9 to 500.0	0.0 to 100.0
Setting number	0	1	2	3	4

Setting number	Input type	Name	Temperature range (°C)
5	Thermocouple	K	−200 to 1300
6	Thermocouple	J	−20.0 to 500.0
7	Thermocouple	J	−100 to 850
8	Thermocouple	T	−20.0 to 400.0
9	Thermocouple	T	−199.9 to 400.0
10	Thermocouple	E	0 to 600
11	Thermocouple	L	−100 to 850
12	Thermocouple	L	−20.0 to 400.0
13	Thermocouple	U	−200 to 400
14	Thermocouple	U	−199.9 to 400.0
15	Thermocouple	N	−200 to 1300
16	Thermocouple	R	0 to 1700
17	Thermocouple	S	0 to 1700
18	Thermocouple	B	100 to 1800
19	Thermocouple	W	0 to 2300
20	Thermocouple	PL II	0 to 1300
21	ES1B Infrared Thermosensor	10 to 70 °C	0 to 90
22	ES1B Infrared Thermosensor	60 to 120 °C	0 to 120
23	ES1B Infrared Thermosensor	115 to 165 °C	0 to 165
24	ES1B Infrared Thermosensor	140 to 260 °C	0 to 260
25	Analog input	4 to 20 mA	Any of the following ranges, by scaling: −1999 to 9999 / −199.9 to 999.9 / −19.99 to 99.99 / −1.999 to 9.999
26	Analog input	0 to 20 mA	Any of the following ranges, by scaling: −1999 to 9999 / −199.9 to 999.9 / −19.99 to 99.99 / −1.999 to 9.999
27	Analog input	1 to 5 V	Any of the following ranges, by scaling: −1999 to 9999 / −199.9 to 999.9 / −19.99 to 99.99 / −1.999 to 9.999
28	Analog input	0 to 5 V	Any of the following ranges, by scaling: −1999 to 9999 / −199.9 to 999.9 / −19.99 to 99.99 / −1.999 to 9.999
29	Analog input	0 to 10 V	Any of the following ranges, by scaling: −1999 to 9999 / −199.9 to 999.9 / −19.99 to 99.99 / −1.999 to 9.999
30	Thermocouple	K	−199.9 to 999.9 (V1.2)

Applicable standards by input type are as follows:

K, J, T, E, N, R, S, B: JIS C1602-1995, IEC584-1
L: Fe-CuNi, DIN 43710-1985
U: Cu-CuNi, DIN 43710-1985
W: W5Re/W26Re, ASTM E988-1990
PL II: According to Platinel II Electromotive Force Table by Engelhard Corp.
JPt100: JIS C 1604-1989, JIS C 1606-1989
Pt100: JIS C 1604-1997 IEC 751

Shaded ranges indicate default settings.

HFU Unit/EJ1N-HFU□-NFL□

■ Ratings

Power supply voltage		24 VDC
Operating voltage range		85% to 110% of rated voltage
Power consumption		2 W max. (at maximum load)
Auxiliary outputs (See note.)	Outputs	4
	Transistor outputs	Max. operating voltage: 30 VDC, Max. load current: 50 mA
Event inputs	Inputs	4
	Contact inputs	ON: 1 kΩ max., OFF: 100 kΩ min.
	Transistor inputs	ON: residual voltage of 1.5 max., OFF: leakage current of 0.1 mA max.
		Outflow current: Approx. 4 mA (per contact)
Programless connection	Downloading (EJ1 reads data from a PLC)	Number of parameters that can be set: 1200 V1.2
	Uploading (EJ1 writes data to a PLC)	Number of parameters that can be set: 1200 V1.2
	Applicable PLCs	OMRON: SYSMAC CS/CJ/CP Series
		Mitsubishi Electric: MELSEC-An/AnS/FX$_{3UC}$ Series V1.1
		Mitsubishi Electric: MELSEC-Q/QnA/QnAS Series
Ambient temperature range		Operating: −10°C to 55°C Storage: −25°C to 65°C (with no icing or condensation)
Ambient humidity range		Operating: 25% to 85% (with no condensation)

Note: Auxiliary outputs can be allocated using digital output allocations.

■ Characteristics

Insulation resistance		20 MΩ min. (at 500 VDC)
Dielectric strength		600 VAC, 50/60 Hz for 1 min between current-carrying terminals of different polarity
Vibration resistance		10 to 55 Hz, 20 m/s^2 for 2 hours each in X, Y, and Z directions
Shock resistance		150 m/s^2, 3 times each in 6 directions
Weight		160 g
Degree of protection		Rear case: IP20, Terminal section: IP00
Memory protection		EEPROM (non-volatile memory) (number of writes: 100,000)
Standards	Approved standards	UL61010C-1, CSA C22.2 No.1010-1
	Conformed standards	EN61010-1 (IEC61010-1): Pollution level 2, overvoltage category II
EMC Directive		Refer to page 3.

■ Communications Characteristics: Port C

Transmission path connection	RS-485/RS-422: Multi-point, RS-232C: Point-to-point (See note 1.)
Communications method	RS-485/RS-422 (two-wire, half duplex), RS-232C
Synchronization method	Start-stop synchronization
Communications protocol	• OMRON PLC protocol (Connectable PLCs: SYSMAC CS/CJ/CP Series) • AnA/AnU CPU common commands (Connectable PLCs: MELSEC-An/AnS/FX$_{3UC}$ Series) V1.1 • MC protocol (form 5) (Connectable PLCs: MELSEC-Q/QnA/QnAS Series)
Baud rate	9.6, 19.2, 38.4, 57.6, or 115.2 kbps
Transmission code	Binary
Data bit length	8 bits
Stop bit length	1 bit
Error detection	Depends on protocol selected for the programless communications protocol.
Flow control	None
Interface	RS-485, RS-422, RS-232C (See note 1.)
Retry function	Available
Communications response wait time	0 to 99 ms (default: 5 ms) V1.1
Number of Basic Units that can be connected in parallel (See note 2.)	32 Units (model numbers with TC4:128 channels max., model numbers with TC2:64 channels max.)
Number of HFUs that can be connected V1.1	• SYSMAC CS/CJ/CP-series PLCs: 8 (EJ1-HFU□-NFLK) • MELEC Q/QnA/QnAS-series PLCs: 8 (EJ1-HFU□-NFL2)

Note: 1. The communications method can be switched between RS-485 and RS-232C. A separate model must be used for RS-422 communications.
2. For the number of Units that can be connected, refer to *Connection Precautions* on page 11.

OMRON

■ Ratings

Power supply voltage	DeviceNet power supply	24 VDC (for internal circuits)
	EDU power supply	24 VDC (for RS-485 communications circuits and Temperature Controllers)
Operating voltage range	DeviceNet power supply	11 to 25 VDC
	EDU power supply	20.4 to 26.4 VDC
Power consumption		1 W max. (at maximum load)
Main functions		Remote I/O communications, explicit message communications, CompoWay/F command feed-through function, parameter backup function, and configuration registration
Ambient temperature range		Operating: −10°C to 55°C Storage: −25°C to 65°C (with no icing or condensation)
Ambient humidity range		Operating: 25% to 85% (with no condensation)

■ Characteristics

Insulation resistance		20 MΩ min. (at 500 VDC)
Dielectric strength		600 VAC, 50/60 Hz for 1 min
Vibration resistance		10 to 55 Hz, 10 m/s^2 for 2 hours each in X, Y, and Z directions
Shock resistance		150m/s^2 max. 3 times each in 3 axes, 6 directions
Weight		70 g max.
Degree of protection		IP20
Memory protection		EEPROM, 100,000 write operations (backup data)
Standards	Approved standards	UL61010-1, CSA C22.2 No.1010-1
	Conformed standards	EN61010-1 (IEC61010-1): Pollution level 2, overvoltage category II
EMC Directive		Refer to page 3.

■ Communications Characteristics

Communications protocol		Conforms to DeviceNet.
Communications functions	Remote I/O communications	Master-slave connections (polling, COS, or cyclic) Conforms to DeviceNet specifications.
	I/O allocation	Input and output data can be allocated freely by user with the Configurator. Allocations can be made to DeviceNet parameters or Temperature Controller parameters. Two blocks for IN Area, up to 100 words One block for OUT Area, up to 100 words (The first word is always allocated to the OUT Enable Bit.)
	Message communications	Explicit message communications CompoWay/F communications commands can be sent (commands are sent in explicit message format).
Connection format		Combination of multidrop and T-branch connections (for trunk and drop lines)
Baud rate		DeviceNet: 500, 250, or 125 kbps, or automatic detection of master baud rate
Communications media		Special 5-wire cable (2 signal lines, 2 power lines, and 1 shield line)
Communications distance		

Baud rate	Network length	Drop line length	Total drop line length
500 kbps	100 m max. (100 m max.)	6 m max.	39 m max.
250 kbps	250 m max. (100 m max.)	6 m max.	78 m max.
125 kbps	500 m max. (100 m max.)	6 m max.	156 m max.

The values in parentheses apply when Thin Cables are used.

Communications power supply		11 to 25 VDC
Maximum number of nodes that can be connected		64 (includes Configurator when used.)
Maximum number of slaves that can be connected		63
Error control		CRC error detection
DeviceNet power supply		Power supplied from DeviceNet communications connector
Applicable Temperature Controllers		EJ1 Series (excluding the EJ1G) TC4: EJ1N-TC4A-QQ and EJ1N-TC4B-QQ TC2: EJ1N-TC2A-QNHB, EJ1N-TC2B-QNHB, EJ1N-TC2A-CNB, and EJ1N-TC2B-CNB
Maximum number of Temperature Controllers that can be connected (See note.)		16 Units (model numbers with TC4: 64 channels max., model numbers with TC2: 32 channels max.)

Note: For the number of Units that can be connected, refer to *Connection Precautions* on page 11.

End Unit/EJ1C-EDU

■ Ratings

Power supply voltage		24 VDC
Operating voltage range		85% to 110% of rated voltage
Auxiliary output (See note.)	Outputs	2
	Transistor outputs	Max. operating voltage: 30 VDC, Max. load current: 50 mA
Ambient temperature range		Operating: −10°C to 55°C Storage: −25°C to 65°C (with no icing or condensation)
Ambient humidity range		Operating: 25% to 85% (with no condensation)

Note: Auxiliary output can be allocated using the bus output allocation for each Basic Unit.

■ Characteristics

Insulation resistance		20 MΩ min. (at 500 VDC)
Dielectric strength		600 VAC, 50/60 Hz for 1 min between current-carrying terminals of different polarity
Vibration resistance		10 to 55 Hz, 20 m/s^2 for 2 hours each in X, Y, and Z directions
Shock resistance		150 m/s^2, 3 times each in 6 directions
Weight		70 g
Degree of protection		End Unit case: IP20, Terminal section: IP00
Standards	Approved standards	UL61010C-1, CSA C22.2 No.1010-1
	Conformed standards	EN61010-1 (IEC61010-1): Pollution level 2, overvoltage category II
EMC Directive		Same as for the Basic Unit. Refer to page 3.

■ Communications

Port B (See note 1.)	Basic Unit Communications (Refer to *Communications Specifications* on page 4.)
Port A	Basic Unit Communications (Refer to *Communications Specifications* on page 4.)
Port A connector (See note 2.)	E58-CIFQ1

Note: 1. Port B communications for the End Unit cannot be used when port C communications for the HFU is used.

2. Port A connector communications and port A terminal communications cannot be used at the same time.

Unit Configuration Example

■ Minimal Configuration

Small Systems with 2 Channels or 4 Channels Communicating with the Host Device via RS-485 (CompoWay/F Protocol)

- Alarms can be allocated to the auxiliary output for the End Unit.
- G3ZA/G3PW outputs can be used.
■ Multiple Units without an EJ1N-HFU

Building Systems Communicating with the Host Device, such as a PLC, PT, or Computer, via RS-485 (CompoWay/F Protocol)

- The 2 auxiliary alarm outputs provided on the End Unit can be used for integrated alarm systems.
- G3ZA/G3PW outputs can be used.
- Distributed placement is possible by using multiple EJ1C-EDU End Units.
■ Multiple Units with an EJ1N-HFU

Using the EJ1N-HFU□-NFL□ to Build a System Communicating 1:1 with a PLC Using Programless Communications

- The 2 auxiliary outputs provided on the End Unit can be used.
- The 4 event inputs and 4 auxiliary outputs of the HFU can also be used.
- G3ZA/G3PW outputs can be used.
- Distributed placement is possible by using multiple EJ1C-EDU End Units

Modular Temperature Controller **EJ1**   9
■ Multiple Units with an EJ1N-HFU
Using the EJ1N-HFU□-NFL□ to Build Systems Communicating 1:1 with a PLC
Using Programless Communications V1.1

- Up to eight HFUs can be connected to one port on a PLC.
- G3ZA/G3PW outputs can be used.
- Distributed placement is possible by using multiple EJ1C-EDU End Units.
- To connect more than one HFU, specific PLC and EJ1 models must be used.
  Refer to *Connecting EJ1 Controllers 1:N to a PLC* on page 13.

■ Connection Precautions

Communications Unit Number Setting

• Communications unit numbers 0 to 63 can be assigned to Basic Units and HFUs.

Restrictions on the Number of Units That Can Be Connected

Restrictions for HFUs

• One EJ1N-HFU can manage up to 32 Basic Units (EJ1N-TC4/TC2).
• Up to 16 Units can be connected side by side including the EJ1N-HFU. The End Unit is not included in the 16 Units.

One HFU can manage up to 16 Basic Units
(when using the EJ1N-TC4: 4 channels × 16 Units = 64 channels)

To the host device

Port C

Port B

EJ1N-HFU

EJ1N-TC4 or EJ1N-TC2

EJ1C-EDU

Up to 16 Units can be connected side by side.
Note: End Units are not included in the number of Units that can be connected.

Port B

EJ1N-TC4 or EJ1N-TC2

EJ1C-EDU
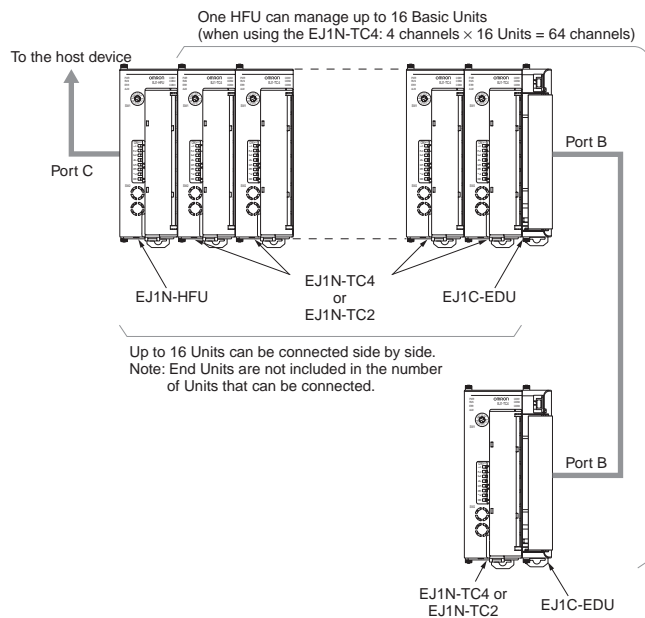

Restrictions When Connecting with the G3ZA

• Up to 8 G3ZA Multi-channel Power Controllers can be connected to one Basic Unit (EJ1N-TC4/TC2).

EJ1N-TC4 or EJ1N-TC2
EJ1C-EDU

G3ZA connection port

G3ZA

Up to 8 G3ZA Power Controllers can be connected to one Basic Unit.
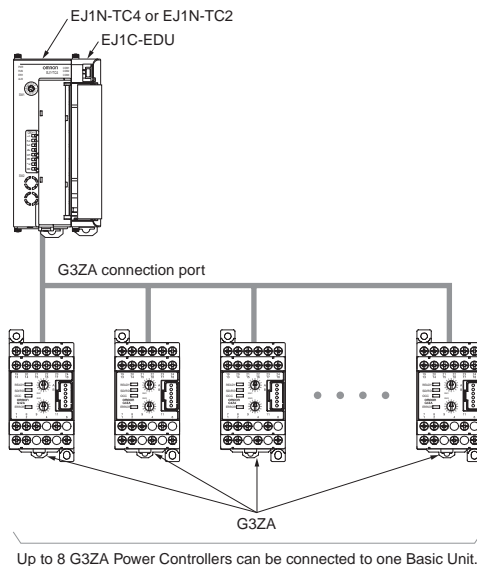

Restrictions for Basic Units

• When the system is configured of only Basic Units (EJ1N-TC4/TC2), up to 64 Units can be connected.
• Distributed placement is possible by using End Units (EJ1C-EDU).
• Up to 16 Units can be connected side by side. The End Unit is not included in the 16 Units.

To the host device

Port B

EJ1N-TC4 or EJ1N-TC2

EJ1C-EDU

Port B

EJ1N-TC4 or EJ1N-TC2

EJ1C-EDU

Up to 64 Basic Units can be connected using distributed placement.
Using EJ1□-TC4 models: 4 channels × 64 Units = 256 channels
Using EJ1□-TC2 models: 2 channels × 64 Units = 128 channels
Note: End Units are not included in the number of Units that can be connected.

Note: Wire the dotted line when settings for all distributed Units are being made from one port A connector.
If the dotted lines are not wired, make the settings for group A using the port A connector for group A and make the settings for group B using the port A connector for group B.

Modular Temperature Controller **EJ1** 11

Restrictions on Unit Placement

Always connect the HFU on the left side of the Basic Unit.

Do not connect the End Unit directly to the HFU.
Always connect a Basic Unit to the End Unit.

EJ1N-TC4 or   EJ1N-HFU
EJ1N-TC2

EJ1N-HFU   EJ1C-EDU
■ Insulation Blocks

Each EJ1 Unit is electrically insulated for each function block as shown in the following figures.
Functional insulation is applied between the power supply, input, output, and communications terminal sections.
If reinforced double insulation is required, use power supplies that comply with IEC60664 for reinforced double insulation for the EJ1's external power supply and for power supplies connected to the EJ1.

EJ1N-TC2

Power supply	Input 1
	Input 2
	Event inputs 1 and 2, CT1 and 2 (See note.)

■ Programless Communications

Communications with PLCs from OMRON (SYSMAC CS/CJ/CP Series) and Mitsubishi Electric (MELSEC-Q/QnA/QnAS/An/Ans/FX$_{3UC}$ Series) can be performed without creating ladder programming.
Using programless communications enables monitoring and changing settings for the EJ1 by simply reading and writing to PLC memory.
The EJ1 automatically performs communications with the PLC, which reduces work hours spent programming for communications from the PLC to the EJ1.

Monitoring can be performed for the EJ1 and the settings can be changed by simply reading and writing to memory.

PLC

Monitor
- PV
- Manipulated variable
- Status

Setting
- SP
- Alarm value 1
- Alarm value 2

The read monitor value is written to the PLC memory.

The EJ1N-HFU automatically performs communications with the PLC.

The EJ1N-HFU reads the value written to the PLC memory.

EJ1N-HFU

Note: Refer to the Mitsubishi Electric PLC documentation for information on MELSEC PLCs.

Connection

■ External Connection

- Functional insulation is applied between the power supply and the I/O sections. If reinforced insulation is required, connect the input and output terminals to devices without any exposed current-carrying parts or to devices with reinforced insulation suitable for the maximum operating voltage of the power supply and I/O sections.
- To comply with the standards for noise terminal voltage for class A in EN 61326, install a noise filter (Densei Lamda MXB-1206-33 or the equivalent) to the DC power line as close as possible to the Temperature Controller.
- Use an SELV power supply that provides overcurrent protection. An SELV circuit is one separated from the power supply with double insulation or reinforced insulation, that does exceed an output voltage of 30 V r.m.s. and 42.4 V peak or 60 VDC max. The OMROM S8VM or S8VS Series is recommended for the power supply.

EJ1N-TC4
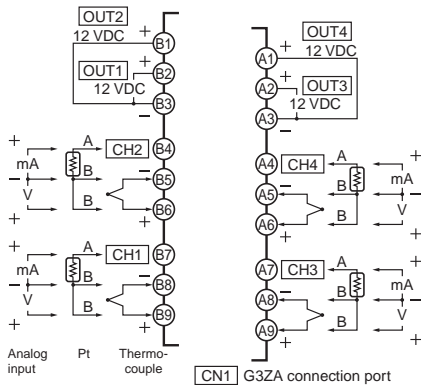

EJ1N-TC2
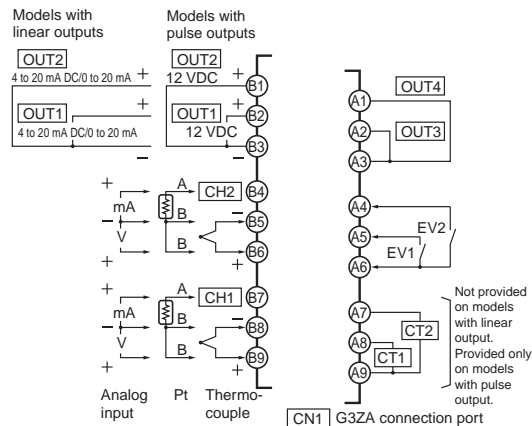

EJ1N-HFU□-NFL□
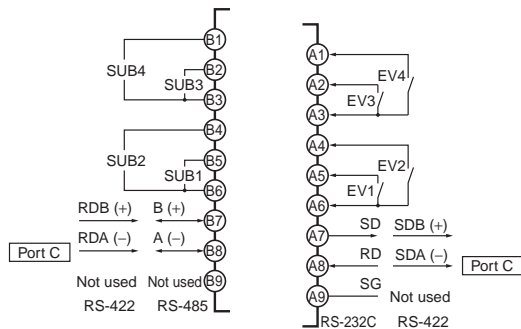

RS-485 for port C and RS-232C can be switched.
A separate EJ1 model must be used for
RS-422 communications.

EJ1N-HFUB-DRT
DeviceNet Connector
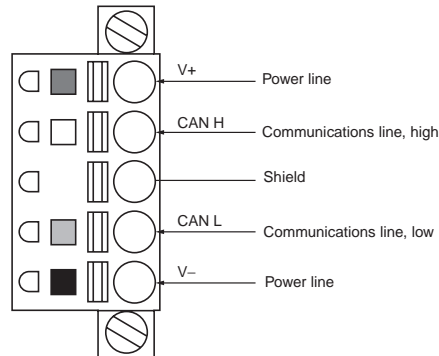

EJ1C-EDUA
Model with Screw Terminals
EJ1C-EDUC
Model with Connector Terminal Block
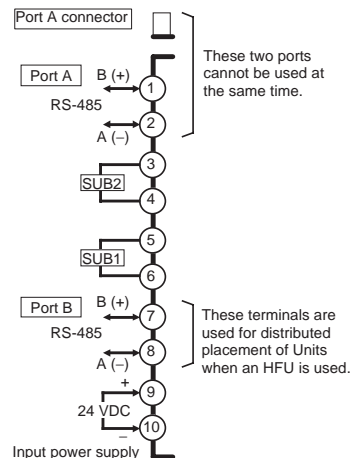

Note: 1. To connect to the G3ZA, separately purchase a G3ZA Connecting Cable (EJ1C-CBLA050) and connect it to the G3ZA connection port (CN1) on the EJ1.
2. To connect to a computer using the port A connector, use a separately sold E58-CIFQ1 USB-Serial Conversion Cable. The Temperature Controller can be connected to a computer using USB.
3. Models with screw-less clamp terminals have terminals A10 and B10, but they are not used. Do not connect anything to them.

Operation Indicators

EJ1N-TC2/TC4

Operation Indicators	Meaning: When SW2 No. 6 is OFF	Meaning: When SW2 No. 6 is ON [V1.2]
PWR/1 [V1.2] **(green)**	Lights when the power is ON.	Lit when output 1 is ON.
RUN/2 [V1.2] **(green)**	Lights during operation.	Lit when output 2 is ON.
ERR/3 [V1.2] **(red)**	Flashes or lights when an error occurs.	Lit when output 3 is ON.
ALM/4 [V1.2] **(red)**	Lights when an alarm is activated.	Lit when output 4 is ON.
COM 1 (orange)	Flashes during communications via port A on the End Unit.	
COM 2 (orange)	Flashes during communications via port B on the End Unit.	
COM 3 (orange)	Flashes during communications with the G3ZA.	

EJ1N-HFU☐-NFL☐

Operation Indicators	Meaning
PWR (green)	Lit while the power is ON. (See note.)
RUN (green)	---
ERR (red)	Flashes or lights when an error occurs.
ALM (red)	Lights when an alarm is activated.
COM 1 (orange)	Flashes during communications via port A on the End Unit.
COM 2 (orange)	Flashes when the EJ1 system is in operation.
COM 3 (orange)	Flashes during communications via port C.

Note: Some time is required for the indicators to light after the power is turned ON.

■ Specification Settings

Switch Operation

- Check that the EJ1 is turned OFF before operating any switch other than pin 6 of SW2. Settings are read only when power is turned ON.
- Set the switches with a small flat-blade screwdriver. Do not set the switches midway between settings.
- SW1 is set to 1 and SW2 pins are all set to OFF in the default settings.

SW1   SW2

Setting the Unit Number

SW1 and SW2 are used together to set the unit number to between 00 and 63. The factory setting is unit number 01.

SW2		SW1															
1	2	0	1	2	3	4	5	6	7	8	9	A	B	C	D	E	F
OFF	OFF	00	01	02	03	04	05	06	07	08	09	10	11	12	13	14	15
ON	OFF	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31
OFF	ON	32	33	34	35	36	37	38	39	40	41	42	43	44	45	46	47
ON	ON	48	49	50	51	52	53	54	55	56	57	58	59	60	61	62	63

SW2 Settings

EJ1N-TC2/TC4

SW2	Meaning
3 V1.2	Set to ON when using the Modbus communications protocol for port B. OFF: The setting for port B communications protocol is used. ON: Modbus is used.
4 to 5 V1.2	Set the baud rate of port B. 4 = OFF, 5 = OFF: Use the baud rate parameter setting for port B (default: 9.6 kbps). 4 = ON, 5 = OFF: 19.2 kbps 4 = OFF, 5 = ON: 38.4 kbps 4 = ON, 5 = ON: 115.2 kbps
6 V1.2	Set to ON to display the output status on the operation indicators. OFF: The operation status is displayed (PWR, RUN, ERR, and ALM). ON: The output status is displayed (outputs 1, 2, 3, and 4). **Note:** Normally keep this pin set to OFF so that the operation status can be checked.
7	ON: G3ZA Multi-channel Power Controller in operation ON when using a G3PW Power Controller. V1.1
8	Use when an HFU is used and Units are distributed. (Refer to the User's Manual for details.)

Note: Make sure power to the Unit is turned OFF before making settings for any pin other than pin 6.
Pin 6 can be turned ON or OFF while the power is ON.

EJ1N-HFU□-NFL□

SW2	Meaning
3 to 7	Not used (OFF)

8	• EJ1N-HFU□-NFLK
	  OFF: RS-485 is selected.
	  ON: RS-232C is selected.
	• EJ1N-HFU□-NFL2
	  OFF (Not used.)

■ Part Names (EJ1N-HFUB-DRT)
Operation Indicators

EJ1N-HFUB-DRT

Operation Indicators		Meaning
MS Module status	**Green**	ON: The Unit condition is normal.
		Flashing: The connection configuration has not been set.
	Red	ON: Fatal error
		Flashing: Non-fatal error
NS Network status	**Green**	ON: Communications established
		Flashing: Communications not established
	Red	ON: Fatal communications error
		Flashing: Non-fatal communications error
TS Temperature Controller communica-tions status	**Green**	ON: Communicating with the Temperature Controllers
		Flashing: The copy operation is being performed.
	Red	Flashing: Communications error with a Temperature Controller
		Flashing: The copy operation failed.

■ Specification Settings

Switch Operation

- Always turn OFF the DeviceNet communications power supply and EDU power supply before setting the Unit. (See note.)
- Set the switches with a small flat-blade screwdriver. Do not set the switches midway between settings.
- The SW1 switches are set to 00, SW2 is set to 0, and SW3 pins are all set to OFF in the default settings.

Note: The setting of pin 3 on SW3 can be changed while the power is ON.

SW1 Settings

Use these switches to set the node address as a slave in the DeviceNet network between 00 and 63 decimal (node addresses 64 to 99 cannot be used).
SW2 Settings

Use this switch to set the highest communications unit number (0 to F: 0 to 15 decimal) of the connected Temperature Controllers. This setting is enabled only when DIP switch pin 1 is set to ON (simple I/O allocations).

SW3 Settings

DIP switch		Meaning
6 (COPY)	**---**	Upload/Download
		OFF → ON (1 s min., 5 s max.) → OFF
5	**---**	Not used.
4 (EDS)	**OFF**	Use the OMRON Configurator.
	ON	Use universal Configurator. (EDS files supported)
3 (UP/DN)	**OFF**	Upload (from Temperature Controller to DeviceNet Communications Unit)
	ON	Download (from DeviceNet Communications Unit to Temperature Controller)
2 (TC2/4)	**OFF**	Simple allocation to TC2 Units.
	ON	Simple allocation to TC4 Units.
1 (MODE)	**OFF**	I/O Allocation from the Configurator.
	ON	Simple I/O Allocation

Functional Upgrades [V1.1] [V1.2]

Functions depend on the version that you are using. The functional upgrades are given below. Refer to the User's Manual (Cat. No. H142) for details.

| Version / Applicable Unit	V1.1	V1.2
Basic Units (EJ1N-TC2/TC4)	• Modbus communications can be used on port B. • Software version 2 of the G3ZA Multi-channel Power Controller can be used. **Note: 1.** When more than one G3ZA Multi-channel Power Controller is connected, version 1 and version 2 can be mixed. (Up to 8 G3ZA Multi-channel Power Controllers can be connected.) **2.** Software version 2 of G3ZA Multi-channel Power Controller can also be used with EJ1 version1.0.	• Autotuning is provided for heating/cooling control. • Self-tuning has been added. • A switch can be used to display the output status on the operation indicators during operation. • Modbus communications can be used to read and write all parameters, and to execute any of the operation commands. • A switch setting can be changed to use Modbus communications on port B. • A switch setting can be used to set the baud rate of port B. • A C0/80 status has been added to the variable types. • Up to eight G3PW Power Controllers can be connected to one Basic Unit. **Note: 1.** The G3PW can be connected to EJ1 V1.1. **2.** The G3PW and G3ZA cannot be used together.
Advanced Unit (EJ1N-HFU☐-NFL☐)	• Programless communications can be used with 1: N connections. • The maximum number of parameters that can be specified for programless upload/download settings has been increased from 300 to 600 each. • Connection is now possible to MELSEC-QnA/An/AnS/FX3uc-series PLCs. • A new setting read operation has been added to programless communications: Setting Read 2. • The speed of programless communications has been increased. • Either "continue" or "stop" can be selected for when errors occur in programless communications.	• Bit specification operation commands have been added to the parameters that can be specified for programless download settings. This simplifies the program when operation commands are executed. • The G3ZA or G3PW Monitor parameter has been added to the parameters that can be specified for programless upload settings. Up to four G3ZA Multi-channel Power Controllers or up to four G3PW Power Controllers can be connected to one Basic Unit. • The maximum number of parameters that can be specified for programless upload/download setting has been increased from 600 to 1200 each. • The maximum number of Basic Units that an HFU with Programless Communications can control has been increased from 16 to 32 Units. • Communications unit numbers 32 to 39 can be used in the HFU via programless communications. This allows the communications unit numbers of Basic Units connected to an HFU to be numbered sequentially, making it easy to copy HFU and Basic Unit settings to other HFUs and Basic Units.
Support Software	CX-Thermo version 3.20 or higher	CX-Thermo version 4.1 or higher

Identifying Upgraded Models

The new functionality can be used with version 1.2 (V1.2). Check the label on the Temperature Controller or the box to determine the version. Models not marked "Ver. 1.1" are version 1.0.

Box Label
Temperature Controller Label
Note: The above example is for version 1.2.

Safety Precautions

⚠ CAUTION

Do not touch the terminals while power is being supplied. Doing so may occasionally result in minor injury due to electric shock.

Use a power supply that complies with the reinforced insulation specified in IEC 60664 for the EJ1 external power supply or the power supply connected to the EJ1. If non-compliant power supplies are used, electric shock may occasionally result in minor injury.

Do not allow pieces of metal, wire clippings, or fine metallic shavings or filings from installation to enter the product. Doing so may occasionally result in electric shock, fire, or malfunction.

Do not use the product where subject to flammable or explosive gas. Otherwise, minor injury from explosion may occasionally occur.

Never disassemble, modify, or repair the product or touch any of the internal parts. Minor electric shock, fire, or malfunction may occasionally occur.

Tighten the terminal screws to between 0.40 and 0.56 N·m. Loose screws may occasionally result in fire.

Set the parameters of the product so that they are suitable for the system being controlled. If they are not suitable, unexpected operation may occasionally result in property damage or accidents.

A malfunction in the product may occasionally make control operations impossible or prevent alarm outputs, resulting in property damage. To maintain safety in the event of malfunction of the product, take appropriate safety measures, such as installing a monitoring device on a separate line.

■ Precautions for Safe Use

Observe the following points to ensure safe operation.

1. The product is designed for indoor use only. Do not use the product outdoors or in any of the following locations.
   • Places directly subject to heat radiated from heating equipment
   • Places subject to splashing liquid or oil atmosphere
   • Places subject to direct sunlight
   • Places subject to dust or corrosive gas (in particular, sulfide gas or ammonia gas)
   • Places subject to intense temperature change
   • Places subject to icing or condensation
   • Places subject to vibration or strong shocks

2. Use and store the product within the rated temperature and humidity ranges. Provide forced-cooling if required.

3. To allow heat to escape, do not block the area around the product. Do not block the ventilation holes on the product.

4. Be sure to wire properly with correct polarity of terminals.

5. Use specified size (M3, width 5.8 mm or less) crimped terminals for wiring. To connect bare wires to the terminal block, use copper braided or solid wires with a gage of AWG22 to AWG14 (equal to cross-sectional area of 0.326 to 2.081 mm^2) for power supply lines and a gage of AWG28 to AWG16 (equal to cross-sectional area of 0.081 to 1.309 mm^2). (The stripping length is 6 to 8 mm.)

6. Do not wire terminals that do not have an identified use.

7. Allow as much space as possible between the product and devices that generate a powerful high-frequency or surge. Separate the high-voltage or large-current power lines from other lines, and avoid parallel or common wiring with the power lines when you are wiring to the terminals.

8. Use the product within the rated load and power supply.

9. Make sure that the rated voltage is attained within two seconds of turning ON the power.

10. It takes 30 minutes from the time the Temperature Controller is turned ON until the current temperature is displayed. Always turns ON the power supply at least 30 minutes before starting temperature control.

11. The switch or circuit breaker must be within easy reach of the operator, and must be marked as a disconnecting means for this unit.

12. Do not use paint thinner or similar chemical to clean with. Use standard grade alcohol.

13. Design the system (e.g., the control panel) allowing leeway for the delay required before product outputs are valid after turning ON power to the product.

14. Never touch the electronic components, connectors, or patterns on product boards with your bare hands. Always hold the product by the case. Inappropriately handling the product may occasionally damage internal components due to static electricity.

15. Use a switch, relay, or other device with contacts to turn OFF the power supply quickly. Gradually lowering the voltage of the power supply may result in incorrect outputs or memory errors.

16. Do not touch the electronic components with your hands or subject them to shock when removing the terminal block.

17. Connect only the specified number of products in only a specified configuration.

18. Mount the product to a DIN Rail mounted vertically to the ground.

19. Always turn OFF the power supply before wiring the product, replacing the product, or changing the product configuration.

20. Attach the enclosed cover seal to the connector opening on the left end product during installation.

21. Do not use port B on the end product when using port C on HFUs.

22. Install the product only after reading the manual provided with the End Unit.

■ Precautions for Correct Use

Installation

1. Do not connect the End Unit directly to an HFU.
2. Connect the End Unit to the right side of a Basic Unit.
3. Connect the HFU to the left side of the Basic Units.
4. Connection is not possible to CJ1-series PLCs.
5. Use the EJ1G-☐☐ for gradient temperature control. When not using gradient temperature control, use the EJ1N-☐☐.
6. When removing the terminal block to replace a Unit, be sure that the new Unit is the same as the Unit that is being replaced.

Service Life

1. Use the product within the following temperature and humidity ranges:
   Temperature: −10°C to 55°C (with no condensation or icing)
   Humidity: 25% to 85%

   When the Temperature Controller is incorporated in a control panel, make sure that the controller's ambient temperature and not the panel's ambient temperature does not exceed 55°C.

2. The service life of electronic devices like Temperature Controllers is determined not only by the number of times the relay is switched but also by the service life of internal electronic components. Component service life is affected by the ambient temperature: the higher the temperature, the shorter the service life and the lower the temperature, the longer the service life. Therefore, the service life can be extended by lowering the temperature of the Temperature Controller.

3. Mounting two or more Temperature Controllers side by side, or mounting Temperature Controllers above each other may cause heat to build up inside the Temperature Controllers, which will shorten their service life. If the Temperature Controllers are mounted above each other or side by side, use forced cooling by fans or other means of air ventilation to cool down the Temperature Controllers.
   However, be sure not to cool only the terminals. Doing so will result in measurement errors.

Ensuring Measurement Accuracy

1. When extending or connecting the thermocouple lead wire, be sure to use compensating wires that match the thermocouple types.
2. When extending or connecting the lead wire of the platinum resistance thermometer, be sure to use wires that have low resistance and keep the resistance of the three lead wires the same.
3. Mount the Temperature Controller so that it is horizontally level.
4. If the measurement accuracy is low, check to see if input shift has been set correctly.

Precautions for Operation

1. A certain amount of time is required for the outputs to turn ON from the time the power supply is turned ON. Due consideration must be given to this time when incorporating Temperature Controllers in a sequence circuit.
2. It takes 30 minutes from the time the Temperature Controller is turned ON until the current temperature is displayed. Always turns ON the power supply at least 30 minutes before starting temperature control.
3. Avoid using the Temperature Controller near a radio, television set, or other wireless device. Its use would result in reception disturbance.

Wiring Screw-Less Clamp Terminals
There are two holes for each terminal. The hole on the right is the operation hole and the hole on the left is the wire hole.

Insert a flat-blade screwdriver with a width of 2.5 mm into the operation hole, insert the wire into the wire hole, and then remove the screwdriver. The wire will be clamped.
Use crimp terminals that are suitable for the cross-sectional area of the wire.

Recommended crimp terminals:
Weidmuller H-sleeve series

Installation

Connecting Units

1. Align the connectors and connect the Units to each other. Connect an End Unit to the Unit on the right end.

Note: 1. Do not connect the End Unit directly to an HFU.
      2. Connect the End Unit to the right side of a Basic Unit.

2. Slide the yellow sliders on the top and bottom of the Units until they click into place.

3. Attach the cover seal to the connector opening on the Unit on the left end of the EJ1.
Removing the Terminal Block
1. Press down the terminal block lever.

Lower the lever.

2. Pull out the terminal block.

Pull out.

Mounting to the DIN Rail

### Mounting

Catch the hook located on the top of the Unit onto the DIN Rail and press the Unit until the Unit locks into place.
(2) Catch the upper hook onto the DIN Rail.

(3) Press in on the Unit.

(1) Lower the hooks.

(4) Make sure the Unit is locked into place.

Dismounting

Pull down on the hook with a flat-blade screwdriver and lift up on the Unit.

Flat-blade Screwdriver

Mount one End Plate to each side of the EJ1C-EDU (PFP-M End Plates are included with the End Unit).

PFP-M

Install the DIN Rail vertically to the ground.

Correct | Incorrect

Vertically | Horizontally
Applicable DIN Rail (sold separately): PFP-100N (100 cm), PFP-50N (50 cm)

Connecting to the G3ZA (EJ1N-TC)

CN1

Connect the G3ZA Connecting Cable to the CN1 connector on the bottom of the TC Unit.

G3ZA

Connect the black line with a white stripe to terminal 7 on the G3ZA and the black line with no stripe to terminal 8.

EJ1C-CBLA050 (Sold Separately) (cable length: 5 m)
Refer to the "*G3ZA Instruction Manual"* for wiring methods.

Connecting to the G3PW (EJ1N-TC)

Set the baud rate to 57.6 kbps (default value) using key operations. For details, refer to the *G3PW Operation Manual.*
Connect the black line with a white stripe to terminal 1 on the G3PW and the black line with no stripe to terminal 2.

EJ1-CBLA050 (order separately) (cable length: 5 m)

Refer to the *G3PW Instruction Manual* for wiring methods.

Refer to the following manual for precautionary information and other information necessary to use the EJ1: EJ1 Modular Temperature Controller User's Manual (Cat. No. H142)

ES2-THB Temperature/Humidity Sensor

Thermocouple/Platinum Resistance Thermometer E52

Single-phase Power Controller G3PW

Can be mounted side by side (See note.)

Note: Side-by-side mounting is possible only for 20 A or 45 A models.

● **Concept behind the Number of SSRs That Can Be Connected in Parallel**
(A): The maximum load current for the voltage output (to drive SSRs) for the Temperature Controller is 21 mA.
(B): The input impedance for SSRs is 7 mA (G3NA).
   In this case, the number of SSRs that can be connected in parallel is (A) ÷ (B), therefore 3.
The maximum load current in the connection example is 21 mA.

EJ1

EJ1N-TC2□-QNHB

Two-channel SSR outputs can be connected to models with TC2□-QNHB.
The number of SSRs that can be connected for each channel is listed on the right.

EJ1N-TC4

Four-channel SSR outputs can be connected to models with TC4.
The number of SSRs that can be connected for each channel is listed on the right.

EJ1N-TC2□-CNB

· Two current output channels can be connected to the TC2□-CNB.
· Up to eight G3ZA or G3PW can be connected to each Basic Unit.

Special Cable (Communications)

Special Cable (Communications)

*The G3ZA is available with 4 or 8 control points.

Number of SSRs That Can be Connected in Parallel

G3PF (SSRs with built-in CTs)
240 VAC, 25 A or 35 A
480 VAC, 25 A or 35 A
Rated input voltage: 12 to 24 VDC
Built-in CT for heater burnout detection and SSR short-circuit detection. *NEW*
→ 4

G3PE (Single Phase)
240 VAC, 15 A, 25 A, 35 A, or 45 A
480 VAC, 15 A, 25 A, 35 A, or 45 A
Rated input voltage: 12 to 24 VDC
Ultra-compact and slim model combined with a heat radiator *NEW*
→ 3

G3PE (Three Phase)
240 or 480 VAC, 15 A, 25 A, 35 A, or 45 A
Rated input voltage: 12 to 24 VDC
Three-phase batch control combined with heat radiator *NEW*
→ 2

G3PA
240 VAC, 10 A, 20 A, 40 A, or 60 A
480 VAC, 20 A, 30 A, or 50 A
Rated input voltage: 240 V: 5 to 24 VDC / 480 V: 12 to 24 VDC
Ultra-compact and slim model combined with a heat radiator
→ 3

G3NA
240 VAC, 5 A, 10 A, 20 A, 40 A, 75 A, or 90 A
480 VAC, 10 A, 20 A, 40 A, 75 A, or 90 A
Rated input voltage: 5 to 24 VDC
Standard model with screw terminals
→ 3
Four 480-VAC models (10 A/20 A /40A) One 240-VAC model (75 A/95 A)

G3NE
240 VAC, 5 A, 10 A, or 20 A
Rated input voltage: 12 VDC
Compact low-cost models with quick-connect terminals
→ 1

G3NH
240 or 440 VAC, 75 A or 150 A
Rated input voltage: 5 to 24 VDC
For controlling high-power heaters
→ 4

EST2-2C-MV4

Monitoring/Setting Support Software for E5CN/CN-H, E5AN/AN-H, E5EN/EN-H, E5ZN, E5☐R/☐R-T, and EJ1 Temperature Controllers Enabling Faster Parameter Setup, Device Adjustment, and Maintenance

CX-One

- Enables editing and batch-downloading parameters from a personal computer, reducing the work required to set parameters.
  Usability is improved with table-formatted parameter editing from version. 4.0.
- Supports Trend Monitoring:
  Monitor data (PV, SP, MV, PID parameter, Alarm ON/OFF, etc.) for up to 31 E5☐N/☐N-H Temperature Controllers.
  Connect up to 64 EJ1N, 17 EJ1G, or 16 E5ZN Temperature Controllers. (The Temperature Controllers must be from the same series.)
- Supports parameter masks to hide parameters unnecessary to display. (Supported only by the E5☐N/☐N-H and E5☐R/☐R-T).
- Logic operations enable setting inputs from external inputs (event inputs) or temperature status, outputs to external outputs (control or auxiliary outputs), and changing operating status with ON/OFF delays.
  (Supported only by the E5☐N/☐N-H).
- Easy adjustment of control performance by fine-tuning.

∗ Fine-tuning instructs the CX-Thermo to calculate a PID parameters by directly inputting commands to improve response.
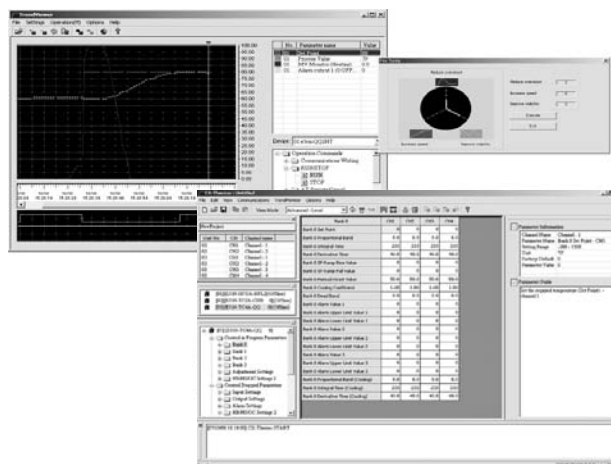

NEW

■ List of Models

Name	Model
CX-Thermo Support Software	EST2-2C-MV4

Specifications

Compatible devices	Temperature Controllers	E5CN (available from April 2004) E5AN, E5EN (available from February 2005), E5CN-H, E5AN-H, E5EN-H E5AR, E5ER E5AR-T, E5ER-T E5ZN EJ1N-TC4, EJ1N-TC2, EJ1N-HFU EJ1G-TC4, EJ1G-TC2, EJ1G-HFU G3ZA (only when connected to EJ1N-TC4, EJ1N-TC2, EJ1G-TC4, EJ1G-TC2) **Note:** Models with DeviceNet communications are not supported.
Personal computer system requirements	OS	Windows 2000 (service pack 3 or higher), XP, or Vista
	CPU	300 MHz min.
	Memory	128 MB min.
	Harddisk	300 MB min. available space
	CD-ROM	One CD-ROM drive min.
	Monitor	SVGA (800 × 600) min.
	Communications ports	• RS-232C port, or USB port, 1 port min.
Connection method		• An E58-CIFQ1 USB-Serial Conversion Cable is required to connect a computer to the setup tool port the E5☐N, E5☐N-H, or EJ1. • A K3SC Interface Converter is used to connect a computer to models with RS-422/RS-485 communications. • An E58-CIFIR USB-Infrared Conversion Cable is required to wirelessly connect a computer to models with infrared communications (E5AN-H or E5EN-H).

USB-Serial Conversion Cable
E58-CIFQ1

Cable for Support Software Enables Connection Even with Temperature Controllers Not Equipped with Communications

• Easily set Temperature Controller parameters by connecting the computer's USB port and an EJ1, or a new-model E5CN, E5AN, or E5EN.

Ordering Information

Model
E58-CIFQ1

Note: Older models of the E5CN, E5AN, and E5EN are not supported.

Specifications

Applicable OS	Windows 2000/XP
Applicable software	Thermo Mini, CX-Thermo Ver. 3.0 or higher
Applicable models	EJ1, E5CN, E5AN, E5EN Series (new models)
USB interface standard	Conforms to USB Specification 1.1.
DTE speed	38,400 bps
Connector specifications	Computer: USB (type A plug)
	Temperature Controller: Serial
Power supply	Bus power (Supplied from USB host controller.)
Power supply voltage	5 VDC
Current consumption	70 mA
Ambient temperature range	Operating: 0°C to 55°C, Stored: −20°C to 60°C (with no icing or condensation)
Ambient humidity range	Operating: 10% to 80% (with no condensation)
Weight	Approx. 100 g

Note: A driver must be installed in the personal computer. Refer to installation information in the operation manual for the Conversion Cable.

Terms and Conditions of Sale

1. **Offer; Acceptance.** These terms and conditions (these "Terms") are deemed part of all quotes, agreements, purchase orders, acknowledgments, price lists, catalogs, manuals, brochures and other documents, whether electronic or in writing, relating to the sale of products or services (collectively, the "Products") by Omron Electronics LLC and its subsidiary companies ("Omron"). Omron objects to any terms or conditions proposed in Buyer's purchase order or other documents which are inconsistent with, or in addition to, these Terms.
2. **Prices; Payment Terms.** All prices stated are current, subject to change without notice by Omron. Omron reserves the right to increase or decrease prices on any unshipped portions of outstanding orders. Payments for Products are due net 30 days unless otherwise stated in the invoice.
3. **Discounts.** Cash discounts, if any, will apply only on the net amount of invoices sent to Buyer after deducting transportation charges, taxes and duties, and will be allowed only if (i) the invoice is paid according to Omron's payment terms and (ii) Buyer has no past due amounts.
4. **Interest.** Omron, at its option, may charge Buyer 1-1/2% interest per month or the maximum legal rate, whichever is less, on any balance not paid within the stated terms.
5. **Orders.** Omron will accept no order less than $200 net billing.
6. **Governmental Approvals.** Buyer shall be responsible for, and shall bear all costs involved in, obtaining any government approvals required for the importation or sale of the Products.
7. **Taxes.** All taxes, duties and other governmental charges (other than general real property and income taxes), including any interest or penalties thereon, imposed directly or indirectly on Omron or required to be collected directly or indirectly by Omron for the manufacture, production, sale, delivery, importation, consumption or use of the Products sold hereunder (including customs duties and sales, excise, use, turnover and license taxes) shall be charged to and remitted by Buyer to Omron.
8. **Financial.** If the financial position of Buyer at any time becomes unsatisfactory to Omron, Omron reserves the right to stop shipments or require satisfactory security or payment in advance. If Buyer fails to make payment or otherwise comply with these Terms or any related agreement, Omron may (without liability and in addition to other remedies) cancel any unshipped portion of Products sold hereunder and stop any Products in transit until Buyer pays all amounts, including amounts payable hereunder, whether or not then due, which are owing to it by Buyer. Buyer shall in any event remain liable for all unpaid accounts.
9. **Cancellation; Etc.** Orders are not subject to rescheduling or cancellation unless Buyer indemnifies Omron against all related costs or expenses.
10. **Force Majeure.** Omron shall not be liable for any delay or failure in delivery resulting from causes beyond its control, including earthquakes, fires, floods, strikes or other labor disputes, shortage of labor or materials, accidents to machinery, acts of sabotage, riots, delay in or lack of transportation or the requirements of any government authority.
11. **Shipping; Delivery.** Unless otherwise expressly agreed in writing by Omron:
    a. Shipments shall be by a carrier selected by Omron; Omron will not drop ship except in "break down" situations.
    b. Such carrier shall act as the agent of Buyer and delivery to such carrier shall constitute delivery to Buyer;
    c. All sales and shipments of Products shall be FOB shipping point (unless otherwise stated in writing by Omron), at which point title and risk of loss shall pass from Omron to Buyer; provided that Omron shall retain a security interest in the Products until the full purchase price is paid;
    d. Delivery and shipping dates are estimates only; and
    e. Omron will package Products as it deems proper for protection against normal handling and extra charges apply to special conditions.
12. **Claims.** Any claim by Buyer against Omron for shortage or damage to the Products occurring before delivery to the carrier must be presented in writing to Omron within 30 days of receipt of shipment and include the original transportation bill signed by the carrier noting that the carrier received the Products from Omron in the condition claimed.
13. **Warranties.** (a) *Exclusive Warranty.* Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied. (b) *Limitations.* OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) *Buyer Remedy.* Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty. See http://www.omron247.com or contact your Omron representative for published information.
14. **Limitation on Liability; Etc.** OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY. Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.
15. **Indemnities.** Buyer shall indemnify and hold harmless Omron Companies and their employees from and against all liabilities, losses, claims, costs and expenses (including attorney's fees and expenses) related to any claim, investigation, litigation or proceeding (whether or not Omron is a party) which arises or is alleged to arise from Buyer's acts or omissions under these Terms or in any way with respect to the Products. Without limiting the foregoing, Buyer (at its own expense) shall indemnify and hold harmless Omron and defend or settle any action brought against such Companies to the extent based on a claim that any Product made to Buyer specifications infringed intellectual property rights of another party.
16. **Property; Confidentiality.** Any intellectual property in the Products is the exclusive property of Omron Companies and Buyer shall not attempt to duplicate it in any way without the written permission of Omron. Notwithstanding any charges to Buyer for engineering or tooling, all engineering and tooling shall remain the exclusive property of Omron. All information and materials supplied by Omron to Buyer relating to the Products are confidential and proprietary, and Buyer shall limit distribution thereof to its trusted employees and strictly prevent disclosure to any third party.
17. **Export Controls.** Buyer shall comply with all applicable laws, regulations and licenses regarding (i) export of products or information; (iii) sale of products to "forbidden" or other proscribed persons; and (ii) disclosure to non-citizens of regulated technology or information.
18. **Miscellaneous.** (a) *Waiver.* No failure or delay by Omron in exercising any right and no course of dealing between Buyer and Omron shall operate as a waiver of rights by Omron. (b) *Assignment.* Buyer may not assign its rights hereunder without Omron's written consent. (c) *Law.* These Terms are governed by the law of the jurisdiction of the home office of the Omron company from which Buyer is purchasing the Products (without regard to conflict of law principles). (d) *Amendment.* These Terms constitute the entire agreement between Buyer and Omron relating to the Products, and no provision may be changed or waived unless in writing signed by the parties. (e) *Severability.* If any provision hereof is rendered ineffective or invalid, such provision shall not invalidate any other provision. (f) *Setoff.* Buyer shall have no right to set off any amounts against the amount owing in respect of this invoice. (g) *Definitions.* As used herein, "including" means "including without limitation"; and "Omron Companies" (or similar words) mean Omron Corporation and any direct or indirect subsidiary or affiliate thereof.

Certain Precautions on Specifications and Use

1. **Suitability of Use.** Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases but the following is a non-exhaustive list of applications for which particular attention must be given: (i) Outdoor use, uses involving potential chemical contamination or electrical interference, or conditions or uses not described in this document. (ii) Use in consumer products or any use in significant quantities. (iii) Energy control systems, combustion systems, railroad systems, aviation systems, medical equipment, amusement machines, vehicles, safety equipment, and installations subject to separate industry or government regulations. (iv) Systems, machines and equipment that could present a risk to life or property. Please know and observe all prohibitions of use applicable to this Product.
NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON'S PRODUCT IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.
2. **Programmable Products.** Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.
3. **Performance Data.** Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.
4. **Change in Specifications.** Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.
5. **Errors and Omissions.** Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.
