PIC24FV32KA304 FAMILY

PIC24FV32KA304 Family Silicon Errata and Data Sheet Clarification

The PIC24FV32KA304 family devices that you have received conform functionally to the current Device Data Sheet (DS39995B), except for the anomalies described in this document.

The silicon issues discussed in the following pages are for silicon revisions with the Device and Revision IDs listed in [Table 1](#). The silicon issues are summarized in [Table 2](#).

The errata described in this document will be addressed in future revisions of the PIC24FV32KA304 family silicon.

Note: This document summarizes all silicon errata issues from all revisions of silicon, previous as well as current. Only the issues indicated in the last column of [Table 2](#) apply to the current silicon revision (A4).

Data Sheet clarifications and corrections start on [page 4](#), following the discussion of silicon issues.

The silicon revision level can be identified using the current version of MPLAB® IDE and Microchip's programmers, debuggers, and emulation tools, which are available at the Microchip corporate web site (www.microchip.com).

For example, to identify the silicon revision level using MPLAB IDE in conjunction with MPLAB ICD 2 or PICkit™ 3:

1. Using the appropriate interface, connect the device to the MPLAB ICD 2 programmer/debugger or PICkit™ 3.
2. From the main menu in MPLAB IDE, select Configure>Select Device, and then select the target part number in the dialog box.
3. Select the MPLAB hardware tool (Debugger>Select Tool).
4. Perform a "Connect" operation to the device (Debugger>Connect). Depending on the development tool used, the part number and Device Revision ID value appear in the **Output** window.

Note: If you are unable to extract the silicon revision level, please contact your local Microchip sales office for assistance.

The DEVREV values for the various PIC24FV32KA304 family silicon revisions are shown in [Table 1](#).

TABLE 1: SILICON DEVREV VALUES

Part Number	Device ID ⁽¹⁾	Revision ID for Silicon Revision ⁽²⁾	Part Number	Device ID ⁽¹⁾	Revision ID for Silicon Revision ⁽²⁾
		A4			A4
PIC24F32KA304	4516h	0004h	PIC24FV32KA304	4517h	0004h
PIC24F32KA302	4512h		PIC24FV32KA302	4513h	
PIC24F32KA301	4518h		PIC24FV32KA301	4519h	
PIC24F16KA304	4506h		PIC24FV16KA304	4507h	
PIC24F16KA302	4502h		PIC24FV16KA302	4503h	
PIC24F16KA301	4508h		PIC24FV16KA301	4509h	

Note 1: The Device IDs (DEVID and DEVREV) are located at the last two implemented addresses of configuration memory space. They are shown in hexadecimal in the format "DEVID DEVREV".

2: Refer to the "PIC24FXXKA1XX/KA3XX Flash Programming Specifications" (DS39919) for detailed information on Device and Revision IDs for your specific device.

PIC24FV32KA304 FAMILY

TABLE 2: SILICON ISSUE SUMMARY

Module	Feature	Item Number	Issue Summary	Affected Revisions ⁽¹⁾
				A4
Core	Low-Voltage Regulator	1.	High-voltage programming entry unavailable in Low-Voltage Sleep modes.	X
Reset	BOR	2.	Unexpected BOR events when BOR is disabled in Sleep mode.	X
A/D	Threshold Detect	3.	Auto-scan feature may not trigger correctly in Sleep mode.	X

Note 1: Only those issues indicated in the last column apply to the current silicon revision.

Silicon Errata Issues

Note: This document summarizes all silicon errata issues from all revisions of silicon, previous as well as current. Only the issues indicated by the shaded column in the following tables apply to the current silicon revision (A4).

1. Module: Core (Low-Voltage Regulator)

When operating in Low-Voltage Sleep mode, LVREN = 1 (RCON<12>) and LVRCFG = 0 (FPOR<2>), the device may not be able to enter programming modes using high-voltage entry (VIHH applied to MCLR).

Work around

If entry into a programming mode is required while the device is in Low-Voltage Sleep mode, use low-voltage entry into programming. Verify that MCLR functionality is enabled, MCLRE = 1 (FPOR<7>), before attempting programming.

Affected Silicon Revisions

A4							
X							

2. Module: Reset (BOR)

Under certain conditions, the device may improperly perform a Brown-out Reset upon wake-up from a Sleep mode. This has been observed under two conditions:

1. When the BOR is disabled in Sleep mode, BOREN<1:0> = 10 (FPOR<1:0>), a BOR may occur when the device wakes from Sleep, regardless of the supply voltage.
2. When the BOR is configured for software control (BOREN<1:0> = 01), the device enters and wakes from Sleep normally while the BOR is disabled in software, SBORN = 0 (RCON<13>). However, if the BOR was disabled prior to entering Sleep mode and is subsequently enabled after waking from Sleep, a BOR may occur, regardless of the supply voltage.

BOR functions normally when it is always enabled or disabled (BOREN<1:0> = 11 or 00).

Work around

Do not use Sleep mode when BOREN<1:0> = 10.

If the BOR is to operate under software control, always enable the HLVD module, HLVDEN = 1 (HLVDCON<15>), before enabling the BOR in software (SBORN = 1). This procedure activates the internal band gap reference and assures its stability for the BOR circuit.

Affected Silicon Revisions

A4							
X							

3. Module: A/D (Threshold Detect)

When the auto-scan feature of Threshold Detect is enabled (AD1CON5<15> = 1), automatic scan may fail when these conditions occur together:

- the Device is in Sleep mode, and
- Timer1 is selected as the sample trigger clock source (AD1CON1<7:4> = 0101).

Timer1 and other timers will function correctly as sample triggers in other power-saving modes, such as Idle mode.

Work around

If auto-scan functionality is required during Sleep, use INT0 as the sample trigger.

Affected Silicon Revisions

PIC24FV32KA304 FAMILY

Data Sheet Clarifications

The following typographic corrections and clarifications are to be noted for the latest version of the device data sheet (DS39995B):

Note: Corrections are shown in **bold**. Where possible, the original bold text formatting has been removed for clarity.

1. Module: Overview (and Other Locations)

In several locations throughout the document, references are made to, and information provided for, devices in 20-pin QFN packages. In fact, PIC24FV32KA304 family devices are not available in this package type.

All data for 20-pin QFN packages for this family is to be disregarded. This includes:

- Table 1-3, “PIC32FV32KA304 Family Pinout Descriptions”.
- Table 29-2, “Thermal Packaging Characteristics” in **Section 29.0 “Electrical Characteristics”**.

2. Module: Overview

Throughout Table 1-3 (“PIC32FV32KA304 Family Pinout Descriptions”), the pin assignments for some functions have been incorrectly listed for some package types. These include:

- All CTMU Edge Detect Inputs (CTEDn)
- Input Capture 1
- Output Compare 1 and 3
- Output Compare Fault Input B
- ICSPTM Ports 2 and 3 (PGEC/D 2 and 3)
- I2C2 Clock
- SPI1 and 2 Pins (SCK1 and 2, SDI1 and 2, SDO2, SS2)
- UART1 Transmit and Receive

In some cases, the pin assignments listed were in error. In others, multiple pin assignments were listed where only one existed.

Corrected values for the affected pin functions are provided in [Table 3](#) (corrections in **bold**). Pin functions and assignments that are not shown in this table may be assumed to be correct in the original device data sheet. In addition, the fully multiplexed pin names, shown in the package diagrams at the beginning of the data sheet, may be assumed to be correct.

3. Module: A/D (Threshold Detect)

In Figure 22-2, the CHOLD capacitor is listed with an incorrect value. The correct value is 32 pF.

PIC24FV32KA304 FAMILY

APPENDIX A: DOCUMENT REVISION HISTORY

Rev A Document (3/2011)

Initial release of this document; issued for revision A4.
Includes silicon issues 1 (Core, Low-Voltage Regulator)
and 2 (Reset, BOR).

Rev B Document (5/2011)

Adds silicon issue 3 (A/D, Threshold Detect) to silicon
revision A4.

Adds data sheet clarifications 1 (Overview and Other
Locations), 2 (Overview) and 3 (A/D, Threshold Detect)
for data sheet revision B.

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. **MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE.** Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights.

Microchip received ISO/TS-16949:2002 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELOQ® code hopping devices, Serial EEPROMS, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.
