CUI INC®

**SERIES:** VYB10W | **DESCRIPTION:** DC-DC CONVERTER

FEATURES

· 8 ~ 10 W output
· Industry standard pinout
· 4:1 input range (9 ~ 36 V, 18 ~ 72 V)
· Single and dual outputs
· 1,500 V isolation
· Short circuit protection
· Wide temperature operation (-40 ~ 85°C)
· Efficiency up to 83%

RoHS

V-Infinity

APPLICATION NOTES

1. **Requirement on Output Load**
   In order to ensure the product operates efficiently and reliably, make sure the specified range of input voltage is not exceeded and the minimum output load is not less than 10% load. If the actual load is less than the specified minimum load, the output ripple may increase sharply while its efficiency and reliability will reduce greatly. If the actual output power is very small, please add an appropriate resistor as extra loading.

2. **Recommended Circuit**
   The VYB10W series has been tested according to the following recommended testing circuit. This series should be tested under load. (see Figure 1)

Figure 1

Single Output

Dual Output
If you want to further decrease the input/output ripple, you can increase capacitance properly or choose capacitors with low ESR. If the capacitance is too big, a startup problem might arise. The maximum allowable capacitance to ensure safe and reliable operation is listed in Table 1.

General:

        Cin: 10 ~ 47 µF
        Cout: 10 µF / 100 mA

Table 1

Single Vout (Vdc)	Cout (µF)	Dual Vout (Vdc)	Cout (µF)
3.3	2,200	--	--
5	1,000	±5	680
12	470	±12	330
15	330	±15	220

3. **Remote On/Off**
   When open or high impedance,the converter will be on; When this pin is 'high'; the converter will shutdown; It should be noted that the input current (Ic) should between 5 ~ 10 mA, exceeding the maximum 20 mA will cause permanent damage to the converter. The value of R Can be derived as follows :

$$R = \frac{V_C - V_D - 1.0}{I_C}$$

4. **Input Current**
   When using an unstable power source, please ensure the output voltage and ripple voltage do not excced indexes of the converter. The preceding power source must be able to provide for converter sufficient starting current Ip.

   General: Ip ≤1.6*Iin-max

5. **No parallel connection or plug and play**
