

“ZNR” Transient/Surge Absorbers

Type: **D**

Series: **V**

“ZNR” Transient/Surge Absorber, Series V, Type D features large surge current and energy handling capability for absorbing transient overvoltage in a compact size.

■ Features

- Large withstanding surge current capability in compact sizes
- Large “Energy Handling Capability” absorbing transient overvoltages in compact sizes
- Wide range of varistor voltages
- The standard products shown below have received UL, CSA and VDE standards
Varistor voltage 82-150V : UL, VDE
Varistor voltage 200V over : UL, CSA, VDE
(cf. Application Notes for UL/CSA, VDE recognized parts on page 322 to 323)

■ Recommended Applications

- Transistor, diode, IC, thyristor or triac semiconductor protection
- Surge protection in consumer electronic equipment
- Surge protection in communication, measuring or controller electronics
- Surge protection in electronic home appliances, gas or petroleum appliances
- Relay or electromagnetic valve surge absorption

■ Handling Precautions

Please see Pages 335 to 337

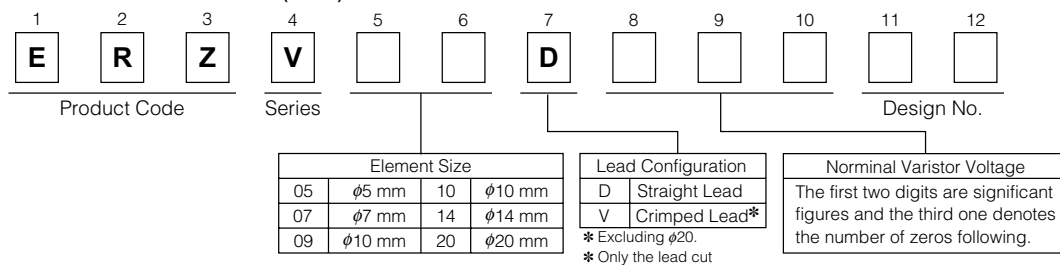

■ Related Standards

- UL1414, UL1449
- CSA C22.2 No.1 Class 2221 01
VDE CECC42000, CECC42200, CECC42201, IEC61051
- “Type Designation(UL)”, “Part Number(CSA)”, “Style Ref. (VDE)”
Are not registered by product Part No..
(Refer to page 322, for the details)

Impulse Derating (Relation between impulse width and impulse current multiple)

ERZV20D820 to ERZV20D511

The graph shows the relationship between Surge Current (A) and Impulse Width (μs) for different surge times. The Y-axis is logarithmic, ranging from 1 to 10,000 A. The X-axis is logarithmic, ranging from 20 to 10,000 μs. The curves represent different surge times, with the following intervals:

- 2 times : 5 min. interval
- up to 10 times : 2 min. interval
- up to 10⁶ times : 10 sec. interval

The curves are labeled as follows:

- 1 Time
- 2 Times
- 10 Times
- 10² Times
- 10³ Times
- 10⁴ Times
- 10⁵ Times
- 10⁶ Times

Graph showing Forward Voltage (V) versus Current (A) for various diode types (182, 112, 102, 911, 821, 751, 681, 621). The graph includes annotations for 'Max. Leakage Current' and 'Max. Clamping Voltage'.

Test Current Waveform:
 10^{-6} to 10^{-3} A: Direct Current
 10^{-1} to 10^4 A: 8/20 μ s

The graph shows the relationship between surge current and impulse width for different surge current ratings. The y-axis represents Surge Current (A) on a logarithmic scale from 1 to 10,000. The x-axis represents Impulse Width (μs) on a logarithmic scale from 20 to 10,000. Seven curves are plotted, each corresponding to a specific surge current rating: 1 Time, 2 Times, 10 Times, 10² Times, 10³ Times, 10⁴ Times, and 10⁵ Times. The curves show that for a given impulse width, the surge current decreases as the number of times the rating is exceeded increases. Conversely, for a given surge current, the allowable impulse width increases as the number of times the rating is exceeded increases.

Legend:

- 2 times : 5 min. interval
- up to 10 times : 2 min. interval
- up to 10⁵ times : 10 sec. interval
