

Ordering Information for CQM

To use regular min-style applicators with CQM, your Model "G" must be equipped with machine-mounted sensors, called G-Adapter. CQM applicators with built-in sensors may also be used, but must be connected to the monitor using a separate hookup cable.

When selecting CQM, you need to order a Monitor and an

Interface Kit. The contents of each kit vary by machine, but typically include hookup cables, indicator lights, and mounting hardware.

An Auto-Adjust Kit is available for upgrading manual precision adjust machines.
