CARLO GAVAZZI – A Global Force In Offering the Complete Package

CARLO GAVAZZI offers a vast array of high quality products, which provide you the optimum solutions to your various automation tasks and applications. Our comprehensive range of products is shown on the adjacent page, with the respective page number for an overview on the products. For complete data sheets and pricing simply visit www.GavazziOnline.com, click on "Online Datasheets" and enter the part number prefix shown in this brochure. Information is TRULY available at your fingertips. More features of our website can be found on page 22.

Application and Market Knowledge

Our multitude of products are the result of years of intensive research and development. Our Engineering, Marketing and Sales Departments give assurance that all of our products are designed with the key features which the market requires for demanding applications.

With the addition of our new manufacturing facility dedicated to researching, developing and manufacturing machinery safeguarding products, CARLO GAVAZZI has now expanded into providing safety solutions: Safety Light Curtains, Safety Control Modules, Safety Magnetic Switches, Safety Interlock Switches and Safety Mat Systems.

User friendly Solid State Relays with integrated heatsinks in standard and special versions for loads up to 90 amps. Low Noise types for meeting Emission Standard 50081. Integrated System Monitoring allowing permanent supervision of critical loads. Analog Full Cycle Control reducing stress of heating elements. Phase Angle Control for switching in accordance to the applied control current.

Thanks to revolutionary technology from CARLO GAVAZZI, TRIPLESIELD™ capacitive sensors are protected against disturbances caused by high levels of electrostatic discharge and surges, and also against noise from inverters, mobile phones, wire conducted noise, and contactor noise.

Current, Voltage and Phase Monitoring Relays for Mains Quality Inspection, Phase Sequence Monitoring, Load Guard. Current and Voltage Transformers. Smart Compact Transducers and Windows-Software-based Power and Energy Analyzers.

All Inductive Sensors come with a 10 year Warranty

NAMUR, transistor, SCR, MOSFET and analog output types. Standard and extended sensing distances from 1 to 40mm. Housing diameters from 4 to 80mm. Choice of cylindrical, limit switch style, rectangular, slotted (U-shaped) and "pancake" style housings. Offered in stainless steel, nickel plated brass or thermoplastic construction. Available with PVC connection cable, nano or micro plug for connection to quick disconnect cables. **All versions come with a standard 10 year warranty!**

□ Non flush mount ■ Flush mount

Capacitive Proximity Sensors

The third generation of the patented, industry leading TRIPLESIELD™ capacitive sensor series are now microprocessor based and laden with exciting new features. Programming the sensor is also easier than ever. With the new Teach Mode capabilities and push button interface, these sensors can be easily set up and installed. They will automatically detect and adjust themselves for NPN or PNP loads, and flush or non-flush mounting. Add in the ability to program for normally open or normally closed output, and it's like having six sensors in one! Various protection types are built-in right into the sensors, for: dirt, moisture, humidity, short circuit, and reverse polarity. Naturally the sensors include all of the industry leading features that make the TRIPLESIELD™ family the safest capacitive sensor available, including protection against ESD, RF, transients, and line-conducted noise. See why the TRIPLESIELD™ continues to be the most innovative capacitive sensor in the market today!

For Harsh Environments

NAMUR, transistor, SCR and relay output types. Sensing distances from 3 to 40mm. Housing diameters from 11 to 40mm. Choice of cylindrical, rectangular and "pancake" style housings. Offered in nickel-plated brass, thermoplastic, polypropylene, PVC or Teflon construction. Available with PVC connection cable or micro plug for connection to M12 disconnect cables.

Additionally, sensors for harsh operating temperatures (-321 to 356°F), as well as versions featuring patented TRIPLESIELD™ protection for the highest immunity from electrostatic discharge, communication interference and fast transients.

Transistor, SCR and relay output types. Sensing distances from 50mm to 50m. Housing diameters from 11 to 40mm. Choice of cylindrical, rectangular and "pancake" style housings. Available in nickel-plated brass, polycarbonate or Luran construction. Offered with PVC connection cable or micro plug for connection to quick disconnect cables. Diffuse reflective, retro-reflective, polarized retro-reflective and through beam sensing principles. Find out today why CARLO GAVAZZI is the world leader in supplying photoelectric sensors to the car wash industry - *perhaps the harshest of sensing environments.*

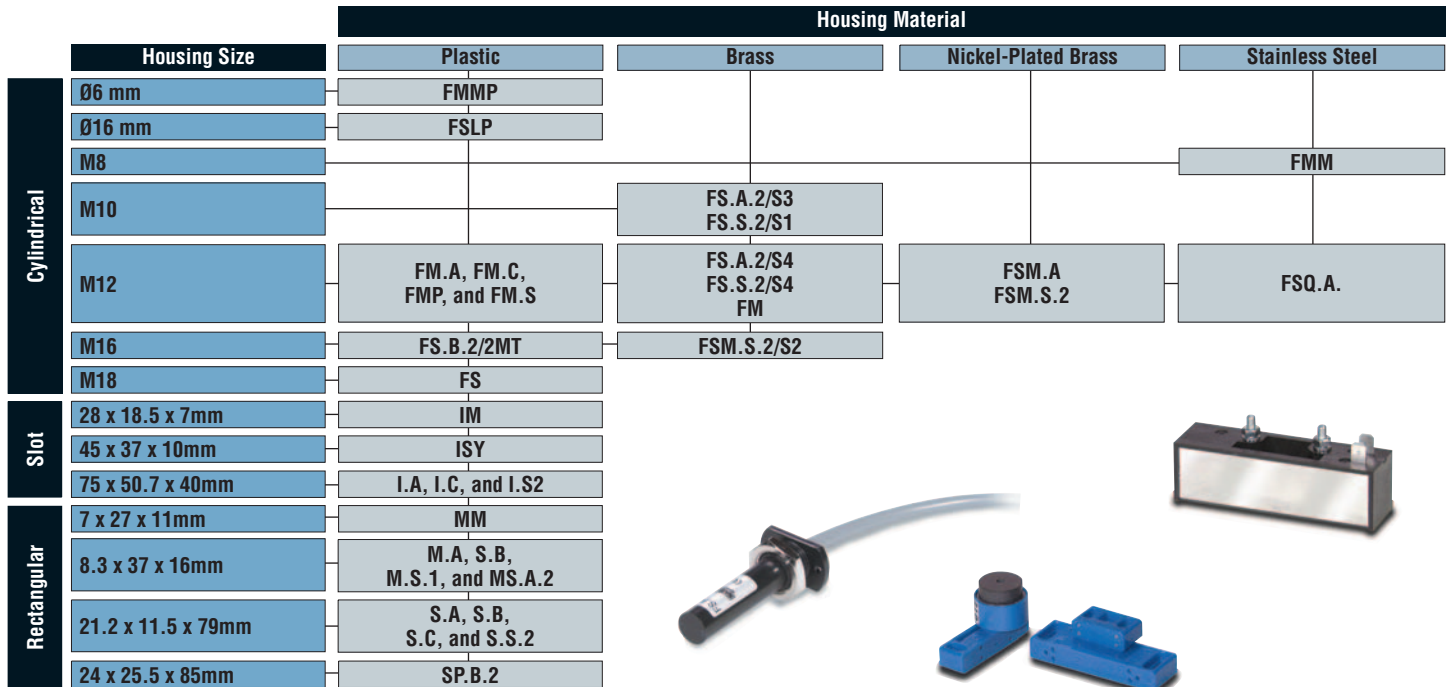

Photoelectric Sensors - Specialized

For applications that require specialized sensors, Carlo Gavazzi now offers photoelectric sensors that go beyond the capabilities of standard sensors. Whether it be detecting transparent objects and changes in contrast, to detecting specific colors and even sorting by multiple colors, Carlo Gavazzi now offers you the solution. A complete family of miniature sensors with full-size features is also available, including laser. The sensors are microprocessor based and can be programmed, or 'taught', by the user through a simple push button interface.

Magnetic Sensors

Magnetic sensors in a variety of sizes, shapes, and materials, to solve the widest variety of applications. Sensors consist of a reed switch, and a magnet (ordered separately). Sensing distances depend upon the size and strength of the magnet.

*for NPN-types only

Optical level sensors in polysulfone, stainless steel, and nickel-plated brass housings, with polysulfone, glass, or polyamide tips. Cable or quick disconnect plug versions available. Used for point level detection of non-coating liquids.

Conductive Level Sensors

Conductive level sensing systems consist of a controller/relay and a probe with multiple electrodes. Used for maximum/minimum control, in filling or emptying applications. Can be used with virtually any type of conductive liquid. Various housing materials are available, including nylon, PVC, Teflon, and stainless steel, to cover many applications.

Float Level Sensors

Mechanical float switches consisting of reed switch and enclosed magnet. Choice of housing materials include polypropylene, nylon, polysulfone and stainless steel, to work with almost any liquid type. Vertical or horizontal mount types, to allow access to any application. All of the float switches are pre-wired, to allow for quick and easy installation.

Direct movement

Angular movement

Multi-directional movement

High quality limit switches are provided in the most popular industrial sizes, shapes, contact configurations, as well as an innovative series of encapsulated limit switches, available with a connection cable or M12 plug. Their rugged metal housings and economical plastic housings offer one to three 1/2" NPT conduit entryways. Output contacts are offered in snap action, slow action, or overlapping configurations. Various types of push button/roller actuators, roller levers, and multi-directional levers are available. These switches are ideal for manufacturers of material handling, packaging, conveying, and machine tool equipment.

Solid State Relays AC and DC for PCB mounting. Single and three phase Solid State Relays for panel mounting. 5 switching types, up to 110 A. SOLITRON ready-to-mount Solid State Relays with integrated heatsink, one and two pole output. SOLITRON Mini – compact 22.5 mm Solid State Relays for DIN-rail mounting with integrated heatsink for applications up to 30 A.

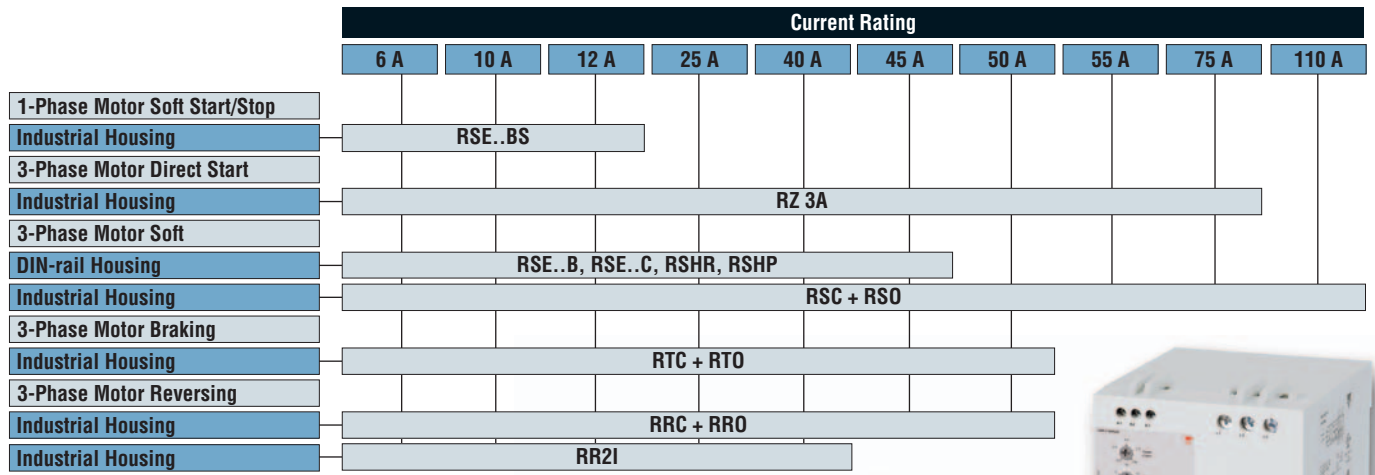

Heatsinks for Solid State Relays

One of the most comprehensive families of chassis or DIN rail mount heat sinks provided by any solid state relay manufacturer, some even provided with cooling fans. Most single and three phase solid state relays sold on the market will work with these heat sink kits, which are delivered with all the necessary mounting hardware.

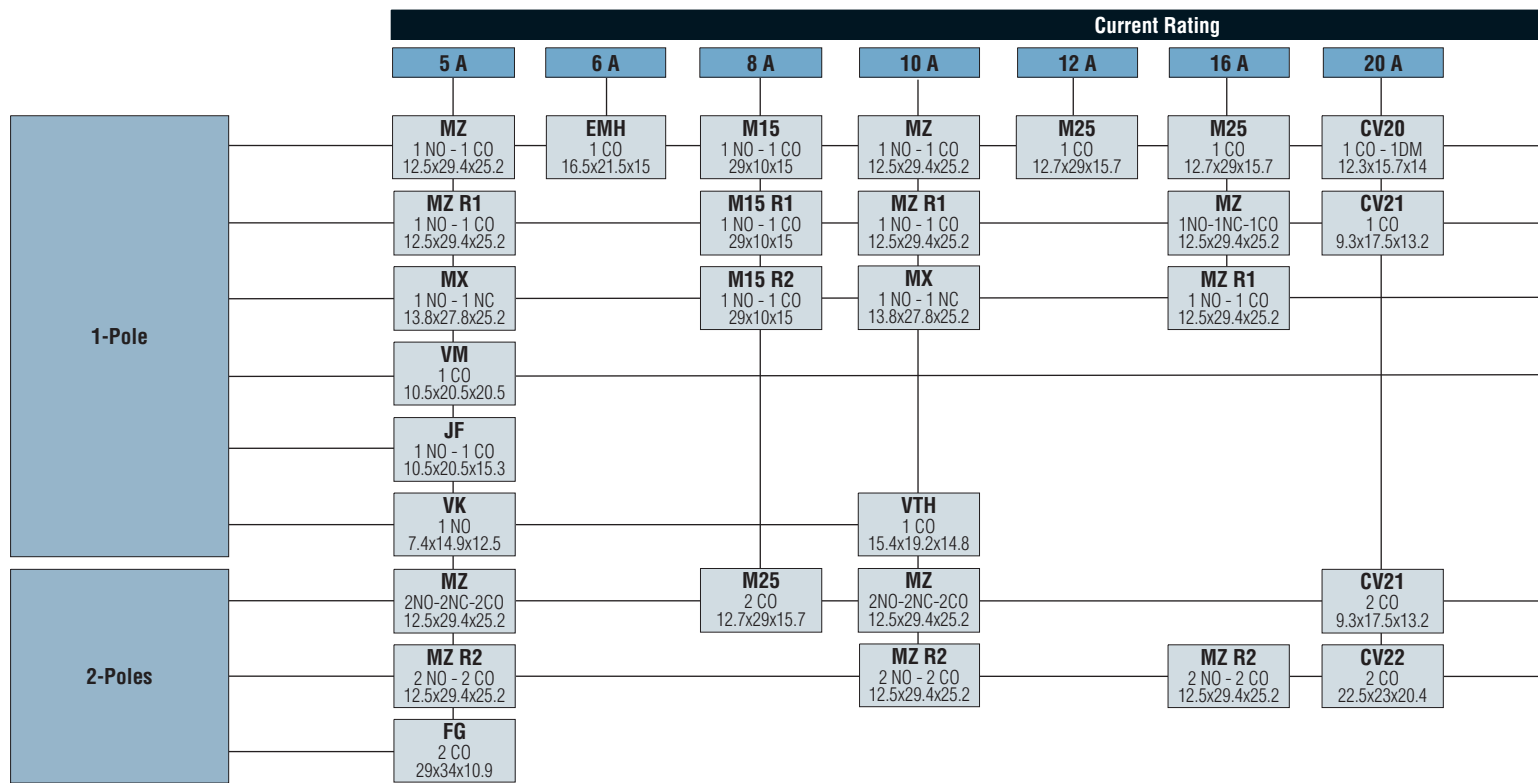

Motor Controllers

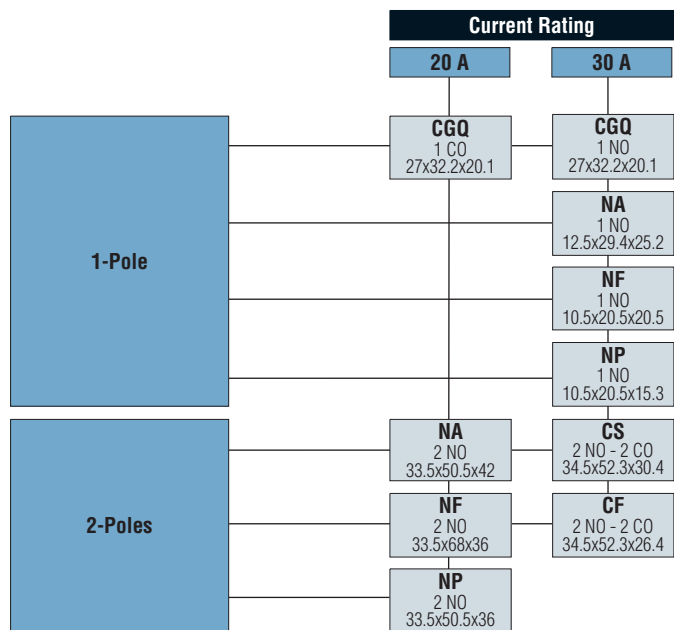

Motor controller for soft starting/stopping (up to 40Hp), adjustable starting torque and ramping times via knobs on the front face. Newer programmable soft starter that allows for customization of the ramp curve to benefit the loads of pumps, fans, conveyors with kick-start and high torque adjustments. Diagnostics onboard for phase loss, wrong sequence, overheating detection and PTC input for motor protection. Forward/reversing relays with built in interlock (up to 3Hp). Dynamic braking units (injects up to 60ADC)

Electromechanical PCB Relays

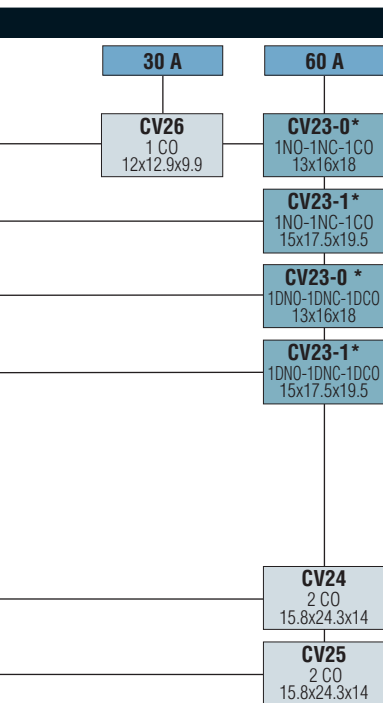

Electromechanical Power Relays

Relays with 1 or 2 poles, from 20 A up to 30 A, AC and DC coils, standard and high insulation between coil/contacts, PCB and fast-on terminals.

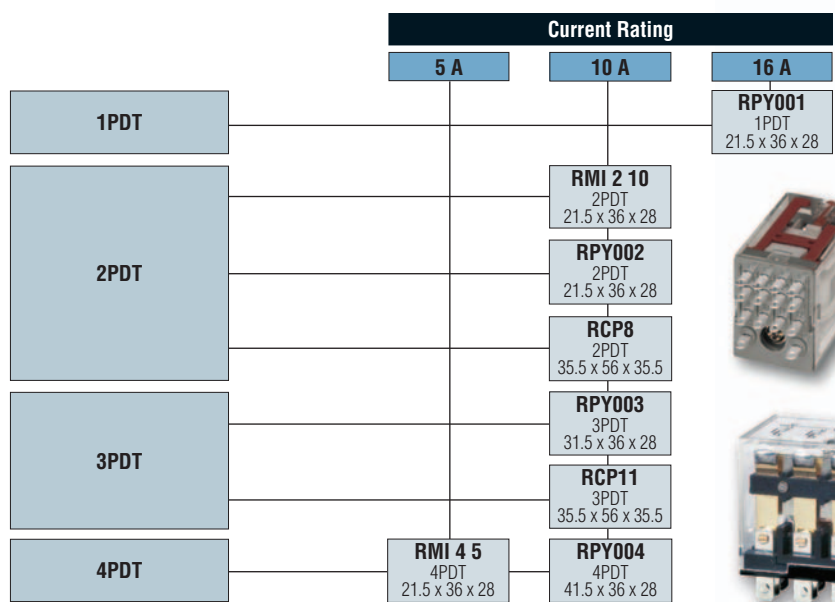

This relay family consists of three main relay groups:

- **Signal Relays** – from 1 contact up to 4 contacts, from 1 A up to 6 A, DC coils only.
- **General Purpose** – from 1 contact up to 2 contacts, from 5 A up to 16 A, AC/DC coils and bistable, 4 KV/8 mm between coils/contacts.
- **Automotive Relays** – from 1 contact up to 2 contacts, single contact from 10 A up to 60 A, double make contact from 2 x 5 A up to 2 x 40 A, DC coils only.

*The current range is from 10 A to 60 A. According to the contact type.

Industrial Electromechanical Relays

The industrial relays are available with four 5 amp changeover contacts, two, three or four 10 amp changeover contacts and one 16 amp changeover contact. They are manufactured with various external connections: soldering and PCB terminals, multi pin socketed type. Available with LEDs and push to test buttons and the most common AC or DC coil voltages.

19 RATING CLASSES IN ONLY 8 DIFFERENT SIZES

Simple slide out cassette for easy

coil replacement for 100A - 800A versions

Full line of mini contactors (up to 16A) with optional terminal styles including screw, fast-on, cage clamp and solder pin. Standard contactors (up to 800A) in only 8 different frame sizes. Easy slide out cassette for coil changes (100A and higher). Thermal overloads and interlock kits available to build starters and reversing units. Enclosed starters also available with and without buttons. Unique electronic and digital motor protection relays for detecting overload conditions as well as phase loss, reversal protection, current imbalance, stalled motor and locked motor detection with alarm and trip output contacts and optional ground fault protection (100mA through 2.5A).

Interlocks Kits for Reversing Contactors

Enclosed Starters

Auxiliary Contacts in 1, 2 & 4 Poles

Digital Motor Protection Relays

Electronic Motor Protection Relays

Carlo Gavazzi GMS Series of Manual Motor Starters provide complete ranges up to 100A

ALSO AVAILABLE

- 22 and 30mm two and four position joysticks (TM and M Series)
- 22mm double or triple headed operators (IP Series)
- Single button and multi-button complete control stations (SC Series)
- Empty boxes with holes (SD, SM, SV Series)
- Pedal switches (PS and PC Series)
- 22mm metal version with rear screw mounting *available on request* (P/V Series)
- 22mm square bezel plastic with rear ring mounting *available on request* (QP Series)

New Ersce brand Pushbuttons, Switches and Pilot Devices are available in 22 and 30mm diameter mounting sizes. A modular design comprised of operators (pushbuttons, E-stops, selectors, key locks), indicators, contact blocks & lamp sockets are all interchangeable, with the 22 and 30mm operators using the same contact blocks and lamp sockets. Up to four (or 6 on special request) independent contacts on one operator are possible with a combination of single and double, NO and NC contact blocks. Full range of extended and flush pushbuttons, 35-60mm E-stops and selectors, which are available in six colors and in illuminated versions. Other operators, enclosures and control stations are also offered.

Cam Switches and Rotary Disconnects

4 Pole 22mm Mount		XNF...4G									

Cam switches for up to 32A, positive opening double break contacts. Change over, motor control, ammeter, voltage, reversing starter, or just about any kind of switch imaginable is available (or can be made).

Rotary disconnects for up to 100A with horsepower ratings. Auxiliary contacts and additional "snap-on" poles are available. They are also available with built-in fuses.

Both the cam switches and rotary disconnects are available for base mounting, rear door mounting and 22mm hole mounting. Full series of knobs and plates available in locking and non-locking styles in black-gray and red-yellow color combinations and 48x48 and 67x67 mm sizes.

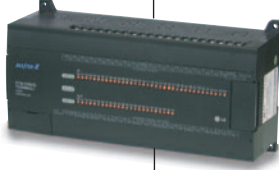

Counters, Hour Meters and Tachometers

Specifications								
Model	Counter	Hour Meter	Tachometer	Input	Output(s)	Supply	Size (in mm)	Display

Single phase monitoring relays for AC/DC current, AC/DC voltage, AC frequency and temperature. Three phase controls for monitoring phase loss, phase sequence, phase angle and phase asymmetry. Available in both 11 pin plug-in and DIN rail mount housings. Most monitors feature adjustable set point(s), time delay(s), hysteresis and latch functions, as well as separate output for under or over set point conditions.

Current Transformers are available with analog output (up to 500AAC), adjustable set point with transistor output (up to 100AAC), as well as 5AAC secondary output (up to thousands of amps). DC shunts and transducers are also offered.

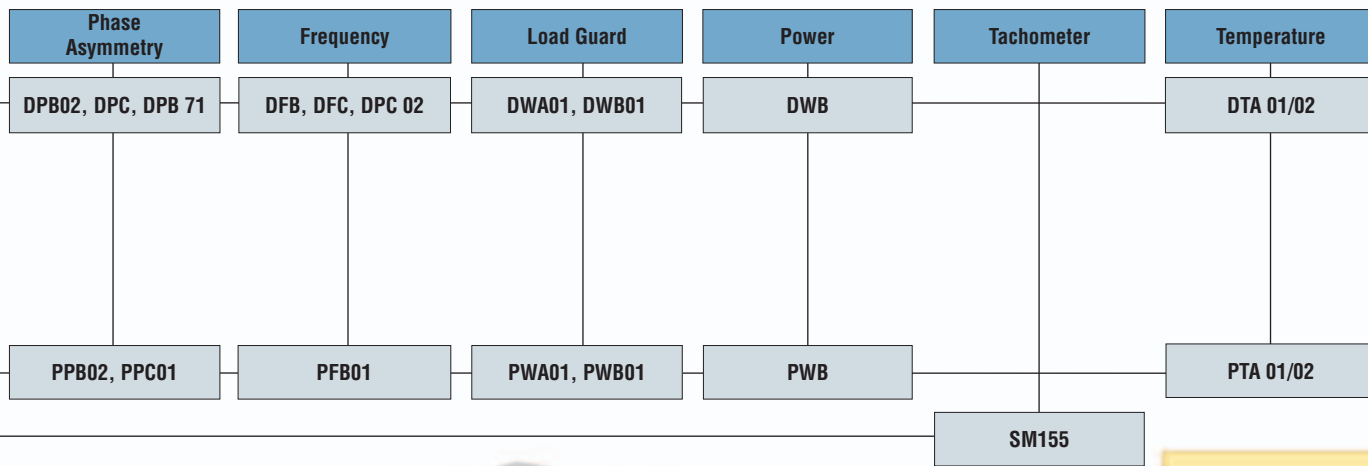

SCT Series split-core CTs from 100 to 6,000 A

DMB51 Series Universal Timer

- Up to 100 hours
- 7 Functions
- Multi-voltage

DIA53 Series self-powered transistor output current monitor, up to 100A.

DPA53 Series 3-Phase monitor for phase loss, sequence too under-voltage

A New Concept of Modularity

Technical advantages and cost benefits:

- PLUG and PLAY modules common to all models
- Maximum in-field flexibility
- Possibility to expand the number and the kind of outputs without replacement of the instruments in-field
- Reduced inventory

Panel Width and Height

Single Door Enclosure Double Door Enclosure

*Also available in stainless steel

Wall mount enclosures are manufactured from a single sheet of metal, and powder coated with a RAL7032 powder coated finish. They are offered with a gasketed locking door (**SI & ST**), with a locking door with a window (**STP**) or in stainless steel (**STX**). The boxes have an external edge with gutter profile preventing ingress of dust, and they carry a NEMA 1,12, 4 / IP55, IP65 environmental rating.

The **SDV** (screw down cover), **SDP** (with door), **SDF** (with gland plate) and **SDVX Series** (with window door) are some of the junction boxes offered. They are offered in a wide range of sizes from 6 x 6 x 3" to 32 x 16 x 5" (H x W x D).

ARETA Modular Cabinets and Consoles

The revolutionary **ARETA** Series is a modular 'ready to assemble' cabinet enclosure. You simply order an **ATTF** cabinet 'roof and floor', then the **ATFI** 'side panels', then the **ATPO** 'door' and then the **ATRE** 'rear panel'. It's as simple as that! Then they're assembled in a matter of minutes. The **ARETA** cabinets are available with the various dimensions:

16, 20, 24 or 32" deep

16, 24, 32, 40, 48, 56 or 64" wide

56, 64, 72, 80 or 88" tall

They can also be 'ganged together' to get additional width using an **ATKU** 'joining kit'.

The ARETA cabinets carry a NEMA12 / IP55 rating and are available with many other options, such as multiple doors, front window doors and inner panels. Although the cabinets are available standard with a rugged RAL7032 textured finish, they are also offered in stainless steel, as PC cabinets with 19" standard rack, with a folding keyboard support, and also as AL Series freestanding consoles in widths of 24, 32, 48 or 64". Also offered are the **BASIC** and **ATB8 Monobloc Series**, which are fully welded and assembled cabinets.

ZBA Series Freestanding Consoles

24, 32, 40 or 48" wide x 33" high x 16" deep with one or two front door(s).

SBA Series Freestanding Consoles

24, 32, 40 or 48" wide x 33" high x 16" deep with one or two front and rear door(s).

PCCO and PCIN Series PC Stands:

For mounting a PC, complete with CPU.

Thermal Management

A wide range of products, such as:

Ultra-thin conditioners, air-water heat exchangers, heaters, thermostats and hydrostats.

CR Double Hinged 19" Rack Enclosures

Double-hinged enclosure eases installation.

All enclosures are 24" wide x 9, 14, 20, 25, 30, 35 or 40" high x 18 or 20" deep.

Safety Light Curtains

		Detection Resolution		
		Finger	Hand	Body
Safety Category	Type 2		SB2-35/x-D15	SB2-x/x-D50
	Type 4	SB4-14/x-D6	SB4-35/x-D15	SB4-x/x-D25 SB4-x/x-D50

Carlo Gavazzi offers a full range of safety light curtains, designed to guard a perimeter area around a machine. Utilizing the through-beam principle of photoelectric sensors, safety light curtains use multiple infrared beams to protect operators from dangerous conditions. When any of the beams are broken, a stop signal is sent to the machine via the safety controller. Type 2 and type 4 rated models available, in finger, hand, and body resolutions. Additional features include muting, override, and automatic or manual reset.

Safety Modules

		Function					
		E-Stop & Safety Gate	2 Hand Safety	Light Curtain	Standstill Monitor	Lift Door Unlock & Cabin Level	Extension Modules

	45 x 75 x 105	MA1-x, MA2-B-T MS1-D	MD1-D			MA1-D Lift	
	45 x 84 x 100				MF1-C		

Safety modules for reliable control of various safety devices. Provides interface between safety device and machinery. Modules are tailored for the following applications: E-stop and safety gates, two hand safety devices, standstill monitors, safety light curtains, safety mats, and elevator cabin/lift level control. Extension modules are also available to expand the number of safety contacts available, without compromising the safety rating.

Safety Mats

Safety mat system is used to provide operator protection in dangerous areas, without restricting operator movement. The pressure sensitive mats are custom fit to each application, to guarantee the best possible coverage. When used with the appropriate Carlo Gavazzi safety module, comprises a safety category 3 system.

Safety switches are designed to protect both people and machinery from numerous dangerous conditions that exist not only in the industrial environment, but also in the commercial world. Some of the switches available include: manual reset switches used for elevators, cable pull switches used for mining applications, conveyors or assembly lines, key interlock switches used for safety doors and barriers, hinge-mount switches used for monitoring the position of doors or gates. The most popular sizes and shapes are offered. Their rugged metal housings and economical plastic housings provide one to three 1/2" NPT conduit entryways.

Angle key with fixing perpendicular to operations direction mounting, always supplied

Straight key for linear actuating

Long straight key for linear actuating

Long angle key with fixing perpendicular to the operating direction mounting

Hinged key with screw for key angle regulation

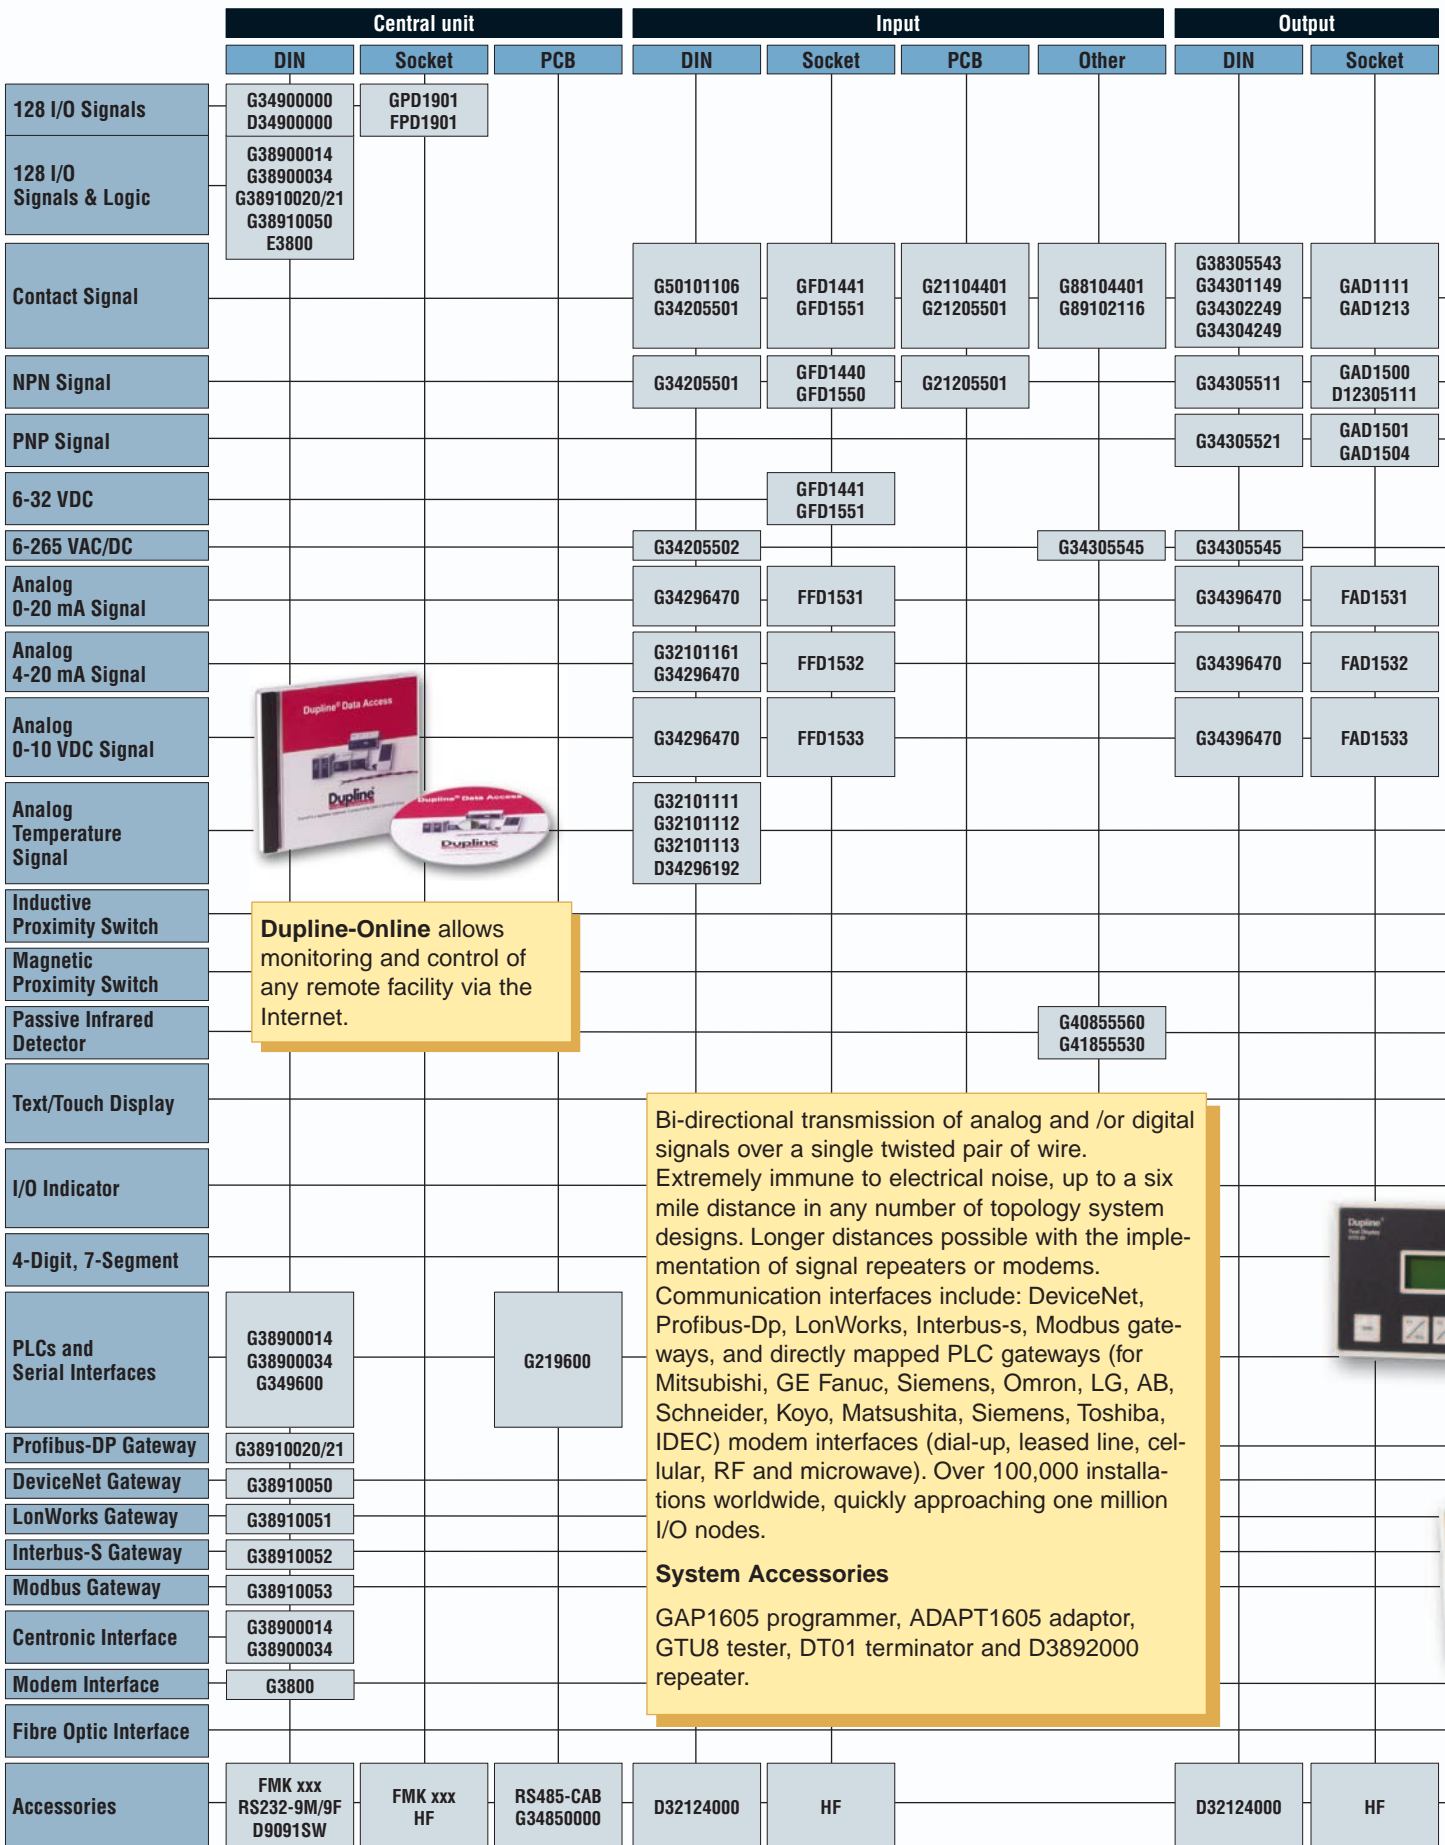

Safety Magnetic Sensors

Housing Type		Outputs			
		1 NO	2 NO	1 NO + 1 NC	2 NO + 1 NC
Cylindrical	SMS-A2P-10	SMS-A2P-30	SMS-A2P-02		
Rectangular		SMS-03	SMS-01 SMS-02	SMS-03/NC	

SMS safety magnetic sensors are used to monitor the position status of hinged, sliding, or removable guards. Can be used in extremely harsh industrial environments where dirty and damp conditions are common, as well as applications where washdown occurs. The sensors are available in rectangular and cylindrical housings, with a variety of output options. Specially coded magnets are also available, to guarantee the safety of the system, by making the sensor impossible to trip with standard magnets. Conforms to safety category 3 or 4, depending upon type.

Dupline® Field & Installationbus

Dupline-Online allows monitoring and control of any remote facility via the Internet.

Bi-directional transmission of analog and /or digital signals over a single twisted pair of wire. Extremely immune to electrical noise, up to a six mile distance in any number of topology system designs. Longer distances possible with the implementation of signal repeaters or modems. Communication interfaces include: DeviceNet, Profibus-Dp, LonWorks, Interbus-s, Modbus gateways, and directly mapped PLC gateways (for Mitsubishi, GE Fanuc, Siemens, Omron, LG, AB, Schneider, Koyo, Matsushita, Siemens, Toshiba, IDEC) modem interfaces (dial-up, leased line, cellular, RF and microwave). Over 100,000 installations worldwide, quickly approaching one million I/O nodes.

System Accessories
GAP1605 programmer, ADAPT1605 adaptor, GTU8 tester, DT01 terminator and D3892000 repeater.
