Features

- Precision Monitoring of +2.5V, +3V, +3.3V, and +5V Power-Supply Voltages
- Fully Specified Over Temperature
- Available in three Output Configurations
- Open-drain $\overline{\text{RESET}}$ Active Low
- 200ms Typ Power-On Reset Pulse Width
- 30µA Supply Current (Typ.)
- Guaranteed Reset Valid to V_{CC} = +1V
- No External Components
- SOT23 and SOT23R: Available in "Green" Molding Compound (No Br, Sb)
- Lead Free Finish/ RoHS Compliant (Note 1)

General Description

The APX803 is used for microprocessor (µP) supervisory circuits to monitor the power supplies in µP and digital systems. They provide excellent circuit reliability and low cost by eliminating external components and adjustments when used with +5V, +3.3V, +3.0V powered circuits.

These circuits perform a single function: they assert a reset signal on power up and whenever the V_{CC} supply voltage declines below a preset threshold, keeping it asserted for at least 140ms after V_{CC} has risen above the reset threshold. Reset thresholds suitable for operation with a variety of supply voltages are available. The APX803 have an open collector active low $\overline{\text{RESET}}$ output. The reset comparator is designed to ignore fast transients on V_{CC}, and the outputs are guaranteed to be in the correct logic state for V_{CC} down to 1V. Low supply current makes the APX803 ideal for use in portable equipment. The APX803 is available in two pin out variants of the 3-pin SOT23 and SOT23R packages.

Applications

- Computers
- Controllers
- Intelligent Instruments
- Critical µP and µC Power Monitoring
- Portable/Battery Powered Equipment

Typical Application Circuit

Pin Descriptions

Pin Name	Description
GND	Ground
$\overline{\text{RESET}}$	Reset Output Pin Active Low Open Drain
V_{CC}	Operating Voltage Input

Absolute Maximum Ratings

Symbol	Parameter	Rating	Unit
ESD HBM	Human Body Model ESD Protection	2	kV
ESD MM	Machine Model ESD Protection	200	V
V_{CC}	Supply Voltage	-0.3 to +6.0	V
V_{RESET}	$\overline{RESET}$ (open drain)	-0.3 to 6	V
I_{CC}	Input Current, V_{CC}	20	mA
I_O	Output Current, $\overline{RESET}$	20	mA
P_D	Continuous Power Dissipation (T_A = +70°C), de-rate 4mW/°C above +70°C	400	mW
T_{OP}	Operating Junction Temperature Range	-40 to +105	°C
T_{ST}	Storage Temperature Range	-65 to +150	°C

Recommended Operating Conditions

Symbol	Parameter	Min	Max	Unit
V_{CC}	Supply Voltage	1.1	5.5	V
V_{IN}	Input Voltage	0	(V_{CC}+0.3)	V
V_{RESET}	$\overline{RESET}$ output voltage	0	5.5	V
T_A	Operating Ambient Temperature Range	-40	85	°C
dV_{CC}/dt	V_{CC} Rate of rise (V_{CC} = 0~V_T)		100	V/µs

Electrical Characteristics (T_A = 25°C)

T_A= -40 to 85°C unless otherwise note. Typical values are at T_A=+25 °C.

Symbol	Parameter		Test Conditions	Min	Typ.	Max	Unit
I_{CC}	Supply Current		V_{TH} + 0.2V		30	40	µA

			V_{CC} = V_{TH} -0.2, I_{SINK} = 3.5mA			0.4	
			V_{CC} > 1.0V, I_{SINK} = 50uA			0.3	
I_{OH}	$\overline{RESET}$ Output High leakage current		V_{CC} > V_{TH} +0.2			1	µA
θ_{JA}	Thermal Resistance Junction-to-Ambient		SOT23/ SOT23R (Note 3)		201		°C/W
θ_{JC}	Thermal Resistance Junction-to-Case		SOT23/ SOT23R (Note 3)		56		°C/W

Notes: 3. Test condition for SOT23 and SOT23R: Devices mounted on FR-4 substrate PC board, 2oz copper, with minimum recommended pad layout.
4. Final datasheet limits to be determined by characterization and correlation.

Functional Description

Microprocessors (µPs) and microcontrollers (µC) have a reset input to ensure that it starts up in a known state. The APX803 drive the µP's reset input to prevent code-execution errors during power-up, power-down, or brownout conditions. They assert a reset signal whenever the V_{CC} supply voltage declines below a preset threshold, keeping it asserted for at least 140ms after V_{CC} has risen above the reset threshold. The APX803 has an open-drain output stage.

Ensuring a Valid Reset Output Down to V_{CC} = 0

$\overline{RESET}$ is guaranteed to be a logic low for V_{CC} > 1V. Once V_{CC} exceeds the reset threshold, an internal timer keeps $\overline{RESET}$ low for the reset timeout period; after this interval, $\overline{RESET}$ goes high. If a brownout condition occurs (V_{CC} dips below the $\overline{RESET}$ reset threshold), $\overline{RESET}$ goes low. Any time V_{CC} goes below the reset threshold, the internal timer resets to zero, and $\overline{RESET}$ goes low. The internal timer starts after V_{CC} returns above the reset threshold, and $\overline{RESET}$ remains low for the reset timeout period.

When V_{CC} falls below 1V, the APX803 $\overline{RESET}$ output no longer sinks current — it becomes an open circuit. Therefore, high-impedance CMOS logic inputs connected to $\overline{RESET}$ can drift to undetermined voltages.
This presents no problem in most applications since most µP and other circuitry is inoperative with V_{CC} below 1V.

Interfacing to µP with Bidirectional Reset Pins
Since the RESET output on the APX803 is open drain, this device interfaces easily with µP/µC that have bidirectional reset pins, such as the Motorola 68HC11.
Connecting the µP supervisor's RESET output directly to the microcontroller's (µC's) RESET pin with a single pull-up resistor allows either device to assert reset.

Supervising and monitoring Multiple Supplies
Generally, the pull-up resistor connected to the APX803 will connect to the supply voltage that is being monitored at the IC's V_{CC} pin. However, some systems may use the APX803 open-drain output to level-shift from the monitored supply to reset the µP powered by a different supply voltage or monitor multiple supplies that will be fed into 1 µC/µP reset input.

Diodes Incorporated and its subsidiaries reserve the right to make modifications, enhancements, improvements, corrections or other changes without further notice to this document and any product described herein. Diodes Incorporated does not assume any liability arising out of the application or use of this document or any product described herein; neither does Diodes Incorporated convey any license under its patent or trademark rights, nor the rights of others. Any Customer or user of this document or products described herein in such applications shall assume all risks of such use and will agree to hold Diodes Incorporated and all the companies whose products are represented on Diodes Incorporated website, harmless against all damages.

Diodes Incorporated does not warrant or accept any liability whatsoever in respect of any products purchased through unauthorized sales channel.
Should Customers purchase or use Diodes Incorporated products for any unintended or unauthorized application, Customers shall indemnify and hold Diodes Incorporated and its representatives harmless against all claims, damages, expenses, and attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized application.

Products described herein may be covered by one or more United States, international or foreign patents pending. Product names and markings noted herein may also be covered by one or more United States, international or foreign trademarks.

LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or
2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.

B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
