APPLICATION NOTE

The PSOTxxLC Series are low capacitance TVS arrays designed to protect I/O or data lines from the damaging effects of ESD or EFT. This product series provides unidirectional & bidirectional protection, with a surge capability of 500 Watts P_{PP} per line for an 8/20 μ s waveform and ESD protection > 40 kilovolts.

BIDIRECTIONAL COMMON-MODE CONFIGURATION (Figure 1)

Two PSOTxxLC devices, when used in parallel, provide protection in a common-mode configuration as depicted in Figure 1.

Circuit connectivity is as follows:

- ✓ I/O Line is connected to Device 1, Pin 1.
- ✓ I/O Line is connect to Device 2, Pin 2.
- ✓ Device 1, Pin 2 is connected to ground.
- ✓ Device 2, Pin 1 is connected to ground.
- ✓ Device 1 & 2, Pin 3 is not connected.

BIDIRECTIONAL DIFFERENTIAL-MODE CONFIGURATION (Figure 1)

In addition, two PSOTxxLC devices, when used in parallel, provide protection in a differential-mode configuration for Ethernet applications as depicted in Figure 2.

Circuit connectivity is as follows:

- ✓ I/O Line 1 is connected to Device 1, Pin 1.
- ✓ I/O Line 1 is connect to Device 2, Pin 2.
- ✓ I/O Line 2 is connected to Device 1, Pin 1.
- ✓ I/O Line 2 is connect to Device 2, Pin 2.
- ✓ Device 1 & 2, Pin 3 is not connected.

CIRCUIT BOARD LAYOUT RECOMMENDATIONS

Circuit board layout is critical for Electromagnetic Compatibility (EMC) protection. The following guidelines are recommended:

- ✓ The protection device should be placed near the input terminals or connectors, the device will divert the transient current immediately before it can be coupled into the nearby traces.
- ✓ The path length between the TVS device and the protected line should be minimized.
- ✓ All conductive loops including power and ground loops should be minimized.
- ✓ The transient current return path to ground should be kept as short as possible to reduce parasitic inductance.
- ✓ Ground planes should be used whenever possible. For multilayer PCBs, use ground vias.
