DATA SHEET

KA2500

I²C BUS CONTROLLED R/G/B VIDEO AMPLIFIER

The KA2500 is a very high frequency video amplifier system with I²C Bus control used in Monitors with high resolution up to 1280 × 1024.

It contains 3 matched R/G/B video Amplifiers with OSD interface and provides flexible interfacing to I²C Bus controlled adjustment systems.

FUNCTIONS

- R/G/B Video Amplifier
- OSD Interface
- I²C BUS Control
- Contrast/OSD Contrast
- Brightness Control
- Cut-Off Brightness Control
- R/G/B SUB Contrast/Cut-Off Control
- Blank/Clamp Gate
- Half tone
- Brightness Uniformity

FEATURES

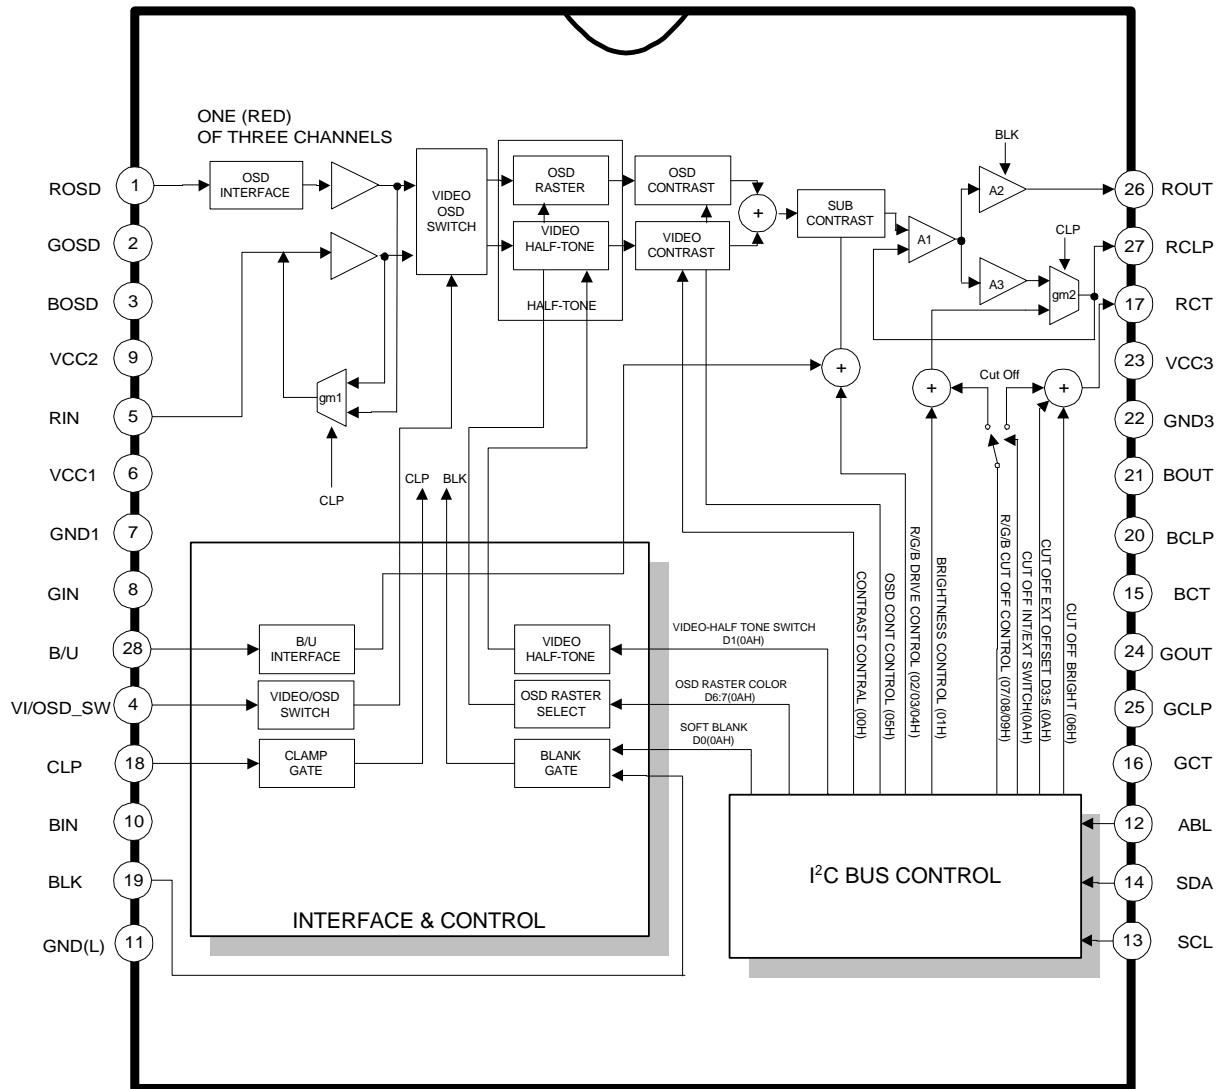

- 3 - Channel R/G/B Video Amplifier, 150MHz @f-3dB
- I²C Bus Control Items
 - Contrast Control
 - SUB Contrast Control For Each Channel
 - Brightness Control
 - OSD Contrast Control
 - Cut-off Brightness Control
 - Cut-off Control For Each Channel
 - Switch Registers for SBLK and Video Half Tone and Cut-Off INT/EXT
- SUB Contrast Control Range: -11dB
- Capable of 7.0Vpp Output Swing Range
- Video/OSD High Speed Switch
- Clamp Gate With Anti OSD Sagging
- B/U (Brightness Uniformity) Interface
- Video Input Clamp, BRT Clamp
- Video & OSD Half Tone Function on OSD Picture
(OSD Raster Selection by HS1, 2: 4 colors)
- OSD Interface, OSD BLK
- ABL
- TTL R/G/B OSD Inputs, 80MHz bandwidth
- Contrast Control Range: -38dB
- OSD Contrast Control Range: -38dB

ORDERING INFORMATION

Device	Package	Operating Temperature
KA2500	28-DIP-600A	-20 °C ~ +75 °C

PIN DESCRIPTION

Table 2. Pin Description

Pin No	Pin Name	Schematic	Description
1 2 3	Red OSD Input (ROSD) Green OSD Input (GOSD) Blue OSD Input (BOSD)		OSD input signals are in TTL level and will be connected to ground when switching to video input
4	Video/OSD Switch (VI/OSD_SW)		Video/OSD switch signal is TTL level PIN4 = 'high', OSD input PIN4 = 'Low', video input
5 8 10	Red Video Input (RIN) Green Video Input (GIN) Blue Video Input (BIN)		MAX input video signal is 0.7 Vpp
6 9	V _{CC1} V _{CC2}	-	Supply voltage (except drive part)

Table 2. Pin Description (Continued)

Pin No	Pin Name	Schematic	Description
7	GND1		Ground (analogue)
11	GND2 (GND (L))		Ground (logic)
15 16 17	Blue Cut-Off (BCT) Green Cut-Off (GCT) Red Cut-Off (RCT)		Cut-Off Control Output
18	Clamp Gate Input (CLP)		<p>Video amp active when clamp gate signal is in low TTL level.</p> <p>Clamp gate Min. pulse width : 0.2us, at fh: 50KHz</p>
19	Blank Gate Input (BLK)		<p>Video amp blanks video signal when blank gate signal is in low TTL level.</p>

Table 2. Pin Description (Continued)

Pin No	Pin Name	Schematic	Description
26 24 21	Red Video Output (ROUT) Green Video Output (GOUT) Blue Video Output (BOUT)		Video signal output
20 25 27	Blue Clamp Cap (BCLP) Green Clamp Cap (GCLP) Red Clamp Cap (RCLP)		Brightness control activated by charging and discharging of the external cap. (0.1μF) (During low clamp gate)
22	GND3	-	Ground (drive part)
23	V _{CC3}	-	Supply voltage (drive part)
13 14	SCL SDA		Serial clock input port of I ² C BUS Serial data input port of I ² C BUS

Table 2. Pin Description (Continued)

Pin No	Pin Name	Schematic	Description
28	B/U Input (B/U)		Parabola input via AC coupling cap
12	ABL Input (ABL)		Automatic beam limitation input (Control Range: 0.5 ~ 4.5V)

ABSOLUTE MAXIMUM RATING (TA = 25 °C) ⁽¹⁾**Table 3. Absolute Maximum Rating**

No	Item	Symbol	Value			Unit
			Min	Typ	Max	
1	Maximum Supply Voltage	V _{CC1/2/3/V_{DD}}	-	-	13.2	V
2	Operating Temperature ⁽²⁾	T _{opr}	-20	-	75	°C
3	Storage Temperature	T _{stg}	-65	-	150	°C
4	Operating Supply Voltage	V _{ccop}	11.4	12.0	12.6	V ⁽³⁾
5	Power Dissipation	P _D	-	-	2.0	W

THERMAL & ESD PARAMETER**Table 4. Thermal & ESD Parameter**

No	Item	Symbol	Value			Unit
			Min	Typ	Max	
1	Thermal Resistance (Junction-ambient)	θ _{ja}	-	46	-	°C/W
2	Junction Temperature	T _j	-	150	-	°C

Fall Time of SCL	t _F	-	-	3.0	uS

I²C BUS Timing Requirement

NOTES;

1. Absolute Maximum Rating Indicates the limit beyond which damage to the device may occur.
2. Operating Ratings indicate conditions for which the device is functional but do not guarantee specific performance limits. For guaranteed specifications and test conditions, See the Electrical Characteristics. The guaranteed specifications apply only for the test conditions listed. Some performance characteristics may degrade when the device is not operated under the listed test conditions.
3. V_{CC} supply pins 6, 9, and 23 must be externally wired together to prevent internal damage during V_{CC} power on/off cycles.
4. The supply current specified is the quiescent current for V_{CC1}/V_{CC2} and V_{CC3} with $R_L = \infty$. The supply current for V_{CC3} (pin 23) also depends on the output load.
5. Output voltage is dependent on load resistor. Test circuit uses $R_L = 390\Omega$
6. Measure gain difference between any two amplifiers $V_{in} = 560mV_{pp}$.
7. When measuring video amplifier bandwidth or pulse rise and fall times, a double sided full ground plane printed circuit board without socket is recommended. Video amplifier 10MHz isolation test also requires this printed circuit board. The reason for a double sided full ground plane PCB is that large measurement variations occur in single sided PCBs.
8. Adjust input frequency from 10MHz (AV max reference level) to the -3dB frequency (f -3dB).
9. Measure output levels of the other two undriven amplifiers relative to the driven amplifier to determine channel separation. Terminate the undriven amplifier inputs to simulate generator loading. Repeat test at $f_{in} = 10MHz$ for Iso_10MHz.
10. A minimum pulse width of 200 ns is guaranteed for a horizontal line of 15kHz. This limit is guaranteed by design. if a lower line rate is used a longer clamp pulse may be required.
11. During the AC test the 4V DC level is the center voltage of the AC output signal. For example. if the output is 4Vpp the signal will swing between 2V DC and 6V DC.
12. These parameters are not tested on each product which is controlled by an internal qualification procedure.

FUNCTIONAL DESCRIPTION

Contrast (OSD Contrast Adjustment) (8-bits)

The contrast adjustment is made by controlling simultaneously the gain of three internal variable gain amplifiers through the I²C bus interface.

The contrast adjustment allows you to cover a typical range of 38dB.

Brightness Adjustment (8-bits)

The brightness adjustment controls to add the same black level (pedestal) to the 3-channel/R/G/B signals after contrast amplifier by I²C BUS.

Cut-Off Brightness Adjustments (8-bits)

The Cut-Off Brightness adjustment is made by simultaneously controlling the external cut-off current.

Cut-Off (SUB Contrast) Adjustment (8-bits ~ 3)

These adjustments are used to adjust the white balance, and the gain of each channel is controlled by I²C BUS.

The SUB contrast adjustment allows you to cover a typical range of 11dB.

OSD Inputs

The KA2500 includes all the circuitry necessary to mix OSD signals into the R/G/B video signal.

You need 4 pins for this function. (R/G/B OSD, OSD blanking)

Serial Interface

The 2-wires serial interface is an I²C BUS interface.

The slave address of the KA2500 is DC (hexadecimal)

Bit8	Bit7	Bit6	Bit5	Bit4	Bit3	Bit2	Bit1
1	1	0	1	1	1	0	0 (W)

Data Transfer

All bytes are sent MSB (Most Significant Bit) bit first and the write data transfer is closed by a stop.

The MCU can write data into the KA2500 registers. To do that, after a start, the MCU must send:

- The I²C address slave byte with a low level for R/W bit (bit1)
- The byte of the internal register address where the MCU wants to write data (SUB Address)
- The data
- Stop

I²C BUS Write Operation

Register Description

Register Sub Address (Slave address: DCH)

Sub Address (Hex)	Register Names	DAC bits	Int. value (Hex)
00	Contrast control	8 bits	80
01	Brightness control (3-ch)	8 bits	80
02	SUB Contrast control (R)	8 bits	80
03	SUB Contrast control (G)	8 bits	80
04	SUB Contrast control (B)	8 bits	80
05	OSD Contrast control	8 bits	80
06	Cut-off Brightness control	8 bits	80
07	Cut-off control (R)	8 bits	80
08	Cut-off control (G)	8 bits	80
09	Cut-off control (B)	8 bits	80
0A	HS2 HS1 CS3 CS2 CS1 CT HT SBLK		20

HT: Video & OSD Half Tone ctrl switch (1: ON, 0: OFF)
