## PIN CONFIGURATION

## PIN DESCRIPTION

SYMBOL	PIN	I/O	FUNCTION
Column-Row Inputs	1-5 & 15-18	I	The keyboard inputs may be used with either a standard 5 × 5 keyboard or an inexpensive single contact (Form A) keyboard. Electronic input from a $\mu$ C can also be used. A valid key in is defined as a single row being connected to a single column.
XT, $\overline{\text{XT}}$	7, 8	I, O	A built-in inverter provides oscillation with an inexpensive 3.579545 MHz crystal or ceramic resonator.
$\overline{\text{T/P MUTE}}$	9	O	The $\overline{\text{T/P MUTE}}$ is a conventional CMOS N-channel open drain output. The output transistor is switched on during dialing sequence and flash break time. Otherwise, it is switched off.
MODE	13	I	Pulling mode pin to VSS places the dialer in tone mode. Pulling mode pin to VDD places the dialer in pulse mode with M/B ratio 40:60 (20 ppS only for W91433N and 10 ppS for the others, M/B = 40:60). Floating mode pin places the dialer in pulse mode with M/B ratio 33:67 (20 ppS only for W91433N and 10 ppS for the others).

## Normal Dialing

,  ,  , ...,

1. D1, D2, ..., Dn will be dialed out.
2. Dialing length is unlimited, but redial is inhibited if length oversteps 32 digits in normal dialing.

## Redialing

,  ,  , ...,  Busy, Come  ,  ,

1. The redial memory content will be dialed out.
2. The  key can execute the redial function only as the first key-in after off-hook; otherwise, it executes pause function.
3. If redialing length oversteps 32 digits, the redialing function will be inhibited.

## Number Store

,  ,  , ...,  ,  ,  ,  (or  )

1. If the sequence of the dialed digits D1, D2, ..., Dn has not  finished,  will be ignored.
2. D1, D2, ..., Dn will be stored in memory location and dialed out.

,  ,  ,  , ...,  ,  ,  (or  )

3. D1, D2, ..., Dn will be stored in memory location but will not be dialed out.
4.  and  keys can be stored as a digit in memory.

In store mode,  is the pause function key;  is the pulse to tone function key.

5. The store mode is released after the store function is executed or when the state of the hook switch is changed.

## Repertory Dialing

1.  ,
2.  ,  ,

## Access Pause

,  ,  ,  ,  , ...,

1. The pause function can be stored as a digit in memory.
2. The pause function is executed in normal dialing, redial dialing, or memory dialing.
3. A detailed timing diagram for the pause function is shown in Figure 3.

## Pulse-to-tone (\*T)

OFF HOOK , D1 , D2 , ..., Dn , \*/T , D1' , D2' , ..., Dn'

1. If the mode switch is set in pulse mode, then the output signal will be:

D1, D2, ..., Dn, Pause (3.6 sec.), D1', D2', ..., Dn'  
(Pulse) (Tone)

2. If the mode switch is set in tone mode, then the output signal will be the form as follow:

D1, D2, ..., Dn, \*, D1', D2', ..., Dn'  
(Tone) (Tone)

3. The dialer remains in tone mode when the digits have been dialed out and can be reset to pulse mode by going on-hook.

4. The pulse-to-tone function timing diagram is shown in Figure 4.

## Flash

OFF HOOK , Fn

1. Fn = F1, ..., F4

2. The dialer will execute flash break time of 600 mS (F1), 300 mS (F2), 73 mS (F3), or 100 mS (F4) and all the flash pause time is 1.0 sec. before the next digit is dialed out.

3. Flash key can be stored as a digit in memory; however, only one flash will be released to users.

4. The system will return to the initial state after the flash pause time is finished.

5. The timing diagram of flash function is shown in Figure 5.

## Save

OFF HOOK , D1 , D2 , ..., Dn , SAVE

1. If the dialing of D1 to Dn is finished, pressing the SAVE key will cause D1 to Dn to be copied to the save memory.

OFF HOOK , SAVE

2. D1 to Dn will be dialed out after the save key is pressed.

## Cascaded Dialing

1. Normal Dialing + Repertory Dialing + Normal Dialing

2. Repertory Dialing + Normal Dialing + Repertory Dialing

3. Redialing + Normal Dialing + Repertory Dialing

4. Redialing is valid as first key-in only.
