### General Description

These devices provide eight, two-input buffers in each package. All employ the newest low-power-Schottky TTL technology. One of the two inputs to each buffer is used as a control line to gate the output into the high-impedance state, while the other input passes the data through the buffer. The 'LS465 and 'LS467 present true data at the outputs, while the 'LS466 and 'LS468 are inverting. On the 'LS465 and 'LS466 versions, all eight TRI-STATE enable lines are common, with access through a 2-input NOR gate. On the 'LS467 and 'LS468 versions, four buffers are enabled from one common line, and the other four buffers are enabled from another common line. In all cases the outputs are placed in the TRI-STATE condition by applying a high logic level to the enable pins. These devices represent octal, low

power-Schottky versions of the very popular DM54/74365, 366, 367, and 368 (DM8095, 96, 97, and 98) TRI-STATE hex buffers.

### Features

- Octal versions of popular DM74365, 366, 367, and 368 (DM8095, 96, 97 and 98)
- Typical power dissipation
  - LS465, 467, (LS95A, 97A) 80 mW
  - LS466, 468, (LS96A, 98A) 65 mW
- Typical propagation delay
  - LS465, 467 (LS95A, 97A) 15 ns
  - LS466, 468 (LS96A, 98A) 10 ns
- Low power-Schottky, TRI-STATE technology

## Absolute Maximum Ratings (Note)

Supply Voltage	7V
Input Voltage	7V
Operating Free Air Temperature Range DM74LS/DM81LS	0°C to +70°C
Storage Temperature Range	-65°C to +150°C

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

**LIFE SUPPORT POLICY**

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
