

Voltage Regulators Adjustable from 2V to 37V at Output Currents Up to 150mA without External Pass Transistors

The CA723 and CA723C are silicon monolithic integrated circuits designed for service as voltage regulators at output voltages ranging from 2V to 37V at currents up to 150mA.

Each type includes a temperature-compensated reference amplifier, an error amplifier, a power series pass transistor, and a current-limiting circuit. They also provide independently accessible inputs for adjustable current limiting and remote shutdown and, in addition, feature low standby current drain, low temperature drift, and high ripple rejection.

The CA723 and CA723C may be used with positive and negative power supplies in a wide variety of series, shunt, switching, and floating regulator applications. They can provide regulation at load currents greater than 150mA and in excess of 10A with the use of suitable NPN or PNP external pass transistors.

Ordering Information

PART NUMBER	TEMP. RANGE (°C)	PACKAGE	PKG. NO.
CA0723E	-55 to 125	14 Ld PDIP	E14.3
CA0723T	-55 to 125	10 Pin Can	T10.C
CA0723CE	0 to 70	14 Ld PDIP	E14.3

Features

- Up to 150mA Output Current
- Positive and Negative Voltage Regulation
- Regulation in Excess of 10A with Suitable Pass Transistors
- Input and Output Short-Circuit Protection
- Load and Line Regulation0.03%
- Direct Replacement for 723 and 723C Industry Types
- Adjustable Output Voltage 2V to 37V

Applications

- Series and Shunt Voltage Regulator
- Floating Regulator
- Switching Voltage Regulator
- High-Current Voltage Regulator
- Temperature Controller
