

System Photoelectric Smoke Detector

Description

The CS235 System Smoke Detector is a photo electric type with a pulsed infrared LED as the light source and a silicon photodiode as the light detector. The CS235 IC, along with passive external components, controls the system timing and signal processing.

Low average current is attained by pulsing the system once every 10 seconds for 20 milliseconds. Bias is applied to the signal processing circuitry for this time interval. During the second half of the pulse, the last 10 milliseconds, the IR LED is pulsed and the unit samples for an alarm level smoke condition. After the first alarm level signal the sample rate increases to a two second interval. After three consecutive alarm level samples the logic drives the output latch signalling the system panel.

The signal processing circuit blocks

are amplifiers A1 and A2, synchronous detector, voltage comparator and the decode counter. The voltage gain of A2 and the comparator reference voltage are set by external resistors.

Additional on-chip features include an I_{CC} current limiter. The current limiter eliminates power-on false alarming.

The oscillator controls the IR LED excitation frequency and provides drive to the synchronous detector. The synchronous detection method has very high noise rejection performance.

The internal latch is capable of sinking 100 milliamps maximum and will clamp the V_{CC} pin to 5 volts when tripped. The latch current is determined by an external resistor typically located in the master removal of detector power.

Features

- Synchronous Detection for High Noise Immunity
- Pulsed Operation for Low Average Current Drain
- System Gain Externally Set
- System Sensitivity Externally Adjustable
- System Operation Monitored by Means of External Red LED

Package Options

18 Lead PDIP & SOIC Wide

Absolute Maximum Ratings

Lead Temperature Soldering	
Wave Solder (through hole styles only)	10 sec. max, 260°C peak
Reflow (SMD styles only)	60 sec. max above 183°C, 230°C peak
Storage Temperature Range	-65°C to 150°C

Electrical Characteristics: $T_A = 25^\circ\text{C}$, unless otherwise stated.
