## FM/AM IF SYSTEM

The HITACHI HA12413 is an IC for FM/AM IF system. Typical applications include cassette radios and modular stereos, functioning and featuring as follows.

### FUNCTIONS

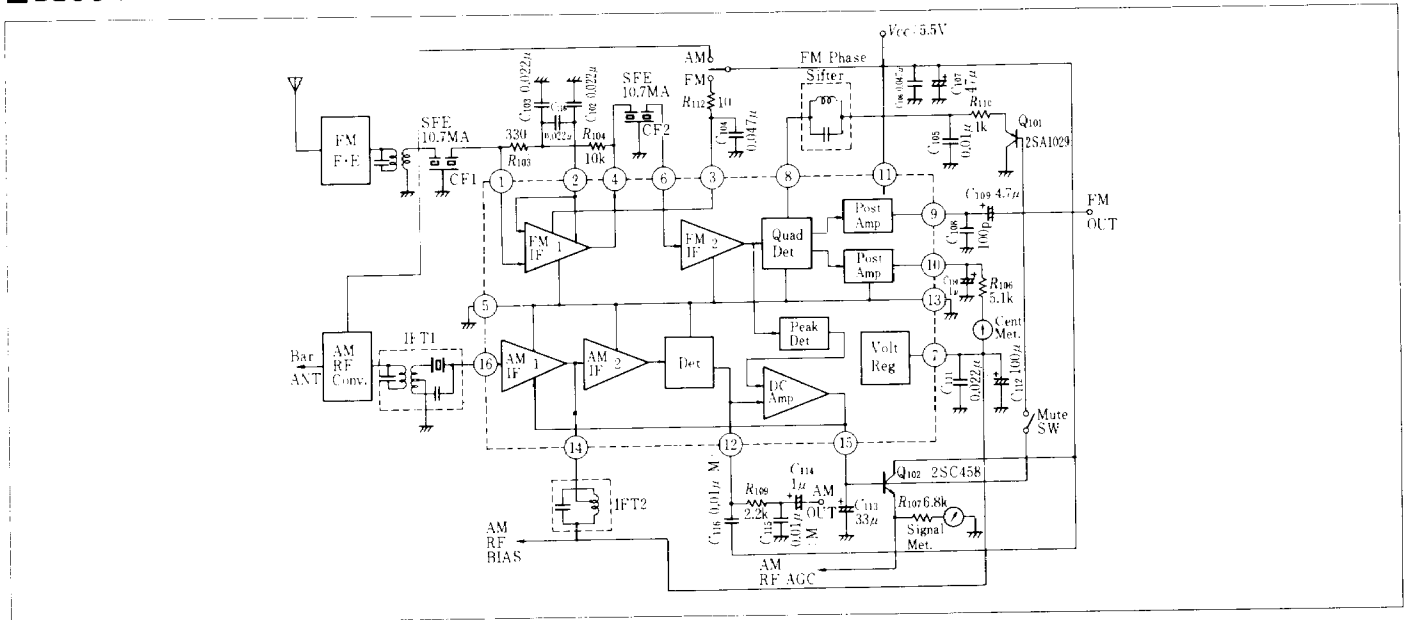

- FM**
- IF Amplifier (With C.F. is inserted between the stages)
  - Audio Amplifier
  - Quadrature Detector
  - Signal Meter (One external NPN transistor required. Used also for AM)
  - Center Meter
- AM**
- IF Amplifier (With AGC)
  - Detector
  - Signal Meter (Same pin with FM)

### FEATURES

- FM**
- High Limiting Sensitivity, and High Stability (33dB $\mu$ )
  - Low Residual Noise (-45dB at Vin=-10dB $\mu$ )
  - Small Side Peak of Detuned Output Voltage (Peak Level is approx. +2dB in comparison with that of Center Frequency)
  - Muting Available at lower input level (One external PNP transistor required)
- AM**
- Voltage Regulator for RF external Circuit
  - High AGC Figure of merit
- FM/AM**
- Low Operating Current (FM: 11mA, AM:8mA)
  - Wide Range of Operating Supply Voltage (3V~16V)
  - Low External Parts count
