CMOS LSI

# LC7821,7822,7823

**Analog Function Switch** 

Use

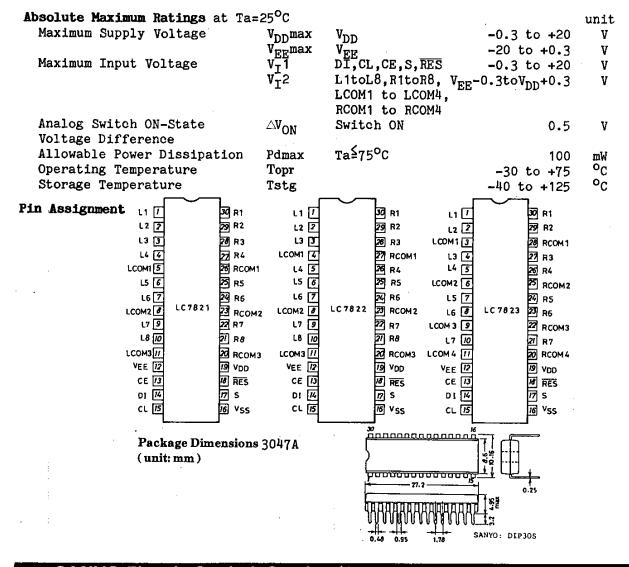

. Serial data-controlled function select switch suited for use in amplifiers, receivers.

Features

- . Analog switches of 8 channels x 2 (LC7823: 7 channels x 2) are contained.
- Three types are available according to the internal connection.
- . Control is exercised by serial data. The LC7821,7822,7823 may be interfaced with a microcomputer (5V-operated) easily.
- . Even if two ICs of the same type are used, they may be connected to the common bus line because the S (selector) pin is provided.
- . Reset pin used to turn OFF all analog switches

No.2294A

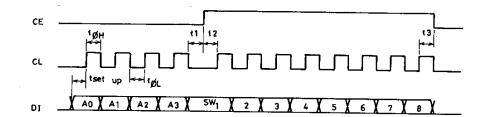

. Wide dynamic range because of ±20V breakdown voltage

SANYO Electric Co., Ltd. Semiconductor Business Headquarters TOKYO OFFICE Tokyo Bldg., 1-10, 1 Chome, Ueno, Taito-ku, TOKYO, 110 JAPAN

Operation Description

1. Data input method

The LC7821, 7822, 7823 are controlled by inputting serial data to the CL, DI, CE pins. Data consists of 12 bits in all (address: 4 bits, data: 8 bits). Ist bit

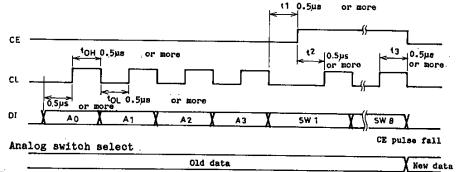

Each switch No. corresponds to analog switches L1 to L8, R1 to R8. Set the bit of a switch to be turned ON to 1.

The address is used for chip select when connected to the common bus line. When the S pin is brought to "L" or "H" level, the transmit data will become as shown below.

| Type No. | S   | Address |    |    |    |
|----------|-----|---------|----|----|----|
|          | Pin | AO      | A1 | A2 | A3 |
| LC 782 1 | L   | 0       | 1  | 0  | 1  |
|          | н   | 1       | 1  | 0  | ١  |
| LC7822   | L   | 0       | 0  | 1  | 1  |
|          | н   | 1       | 0  | 1  | 1  |
| LC7823   | L   | 0       | t  | 1  | 1  |
|          | н   | 1       | ٢  | 1  | 1  |

Note: For the LC7823, the bit of switch 8 becomes "don't care" (0 or 1). The reason for this is that the LC7823 contains 7 channels x 2 of analog switches.

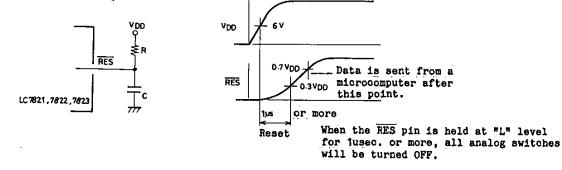

#### 2. Timing of DI, CL, CE pulse signals

Data is fetched into the inside on the positive transition of the CL pulse and latched on the negative transition of the CE pulse.

3. Reset pin

When power is applied, the state of the analog switches will be indeterminate. All analog switches may be turned OFF by connecting C, R to this pin externally.

No products described or contained herein are intended for use in surgical implants, life-support systems, aerospace equipment, nuclear power control systems, vehicles, disaster/crime-prevention equipment and the like, the failure of which may directly or indirectly cause injury, death or property loss.
