32,768 WORD x 8 BIT CMOS STATIC RAM

DESCRIPTION

The TC55328P/J is a 262,144 bits high speed static random access memory organized as 32,768 words by 8 bits using CMOS technology, and operated from a single 5-volt supply. Toshiba's CMOS technology and advanced circuit form provide high speed feature.

The TC55328P/J has low power feature with device control using Chip Enable (\overline{CE}), and has Output Enable Input (\overline{OE}) for fast memory access. Also the device power at memory access is reduced by automatic power down circuit form.

The TC55328P/J is suitable for use in cache memory where high speed is required. All Inputs and Outputs are directly TTL compatible.

The TC55328P/J is packaged in a 28 pin standard DIP and SOJ with 300 mil width for high density surface assembly.
