

SANYO

No. 4750

LA7286**VCR Audio Signal Recording
and Playback Processor****Functions**

- Equalizer amplifier
- Line amplifier
- Recording amplifier
- Recording bias current automatic adjustment circuit
- Ripple filter
- Mute
- ALC
- Recording/playback switch
- SP, LP, EP switch
- Tape head switch

Features

- No adjustment of recording bias current required (due to adoption of automatic adjustment circuit).
- Recording bias oscillation circuit power supply switch on chip.
- Eliminates need for choke coil for recording equalizer.
- Playback amplifier equivalent input noise voltage: 1.0 μ Vrms.
- Reduced capacitance (3.3 μ F) of ALC detection capacitor.
- High withstand voltage head switch on chip.
- Supply voltage: 9 V and 12 V operation.

Specifications**Maximum Ratings at Ta = 25°C**

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	V_{CCmax}		14	V
Pin 2 input voltages	V_{IN2}	DC	± 65	Vp-p
Pin 2 input current	I_{IN2}		± 1.5	mA
Allowable power dissipation	P_{dmax}	$T_a \leq 65^\circ\text{C}$	500	mW
Operating temperature	T_{opr}		-10 to +65	$^\circ\text{C}$
Storage temperature	T_{stg}		-55 to +150	$^\circ\text{C}$

Operating Conditions at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Recommended supply voltage	V_{CC}		9, 12	V
Operating supply voltage range	V_{CCop}		8.5 to 12.5	V

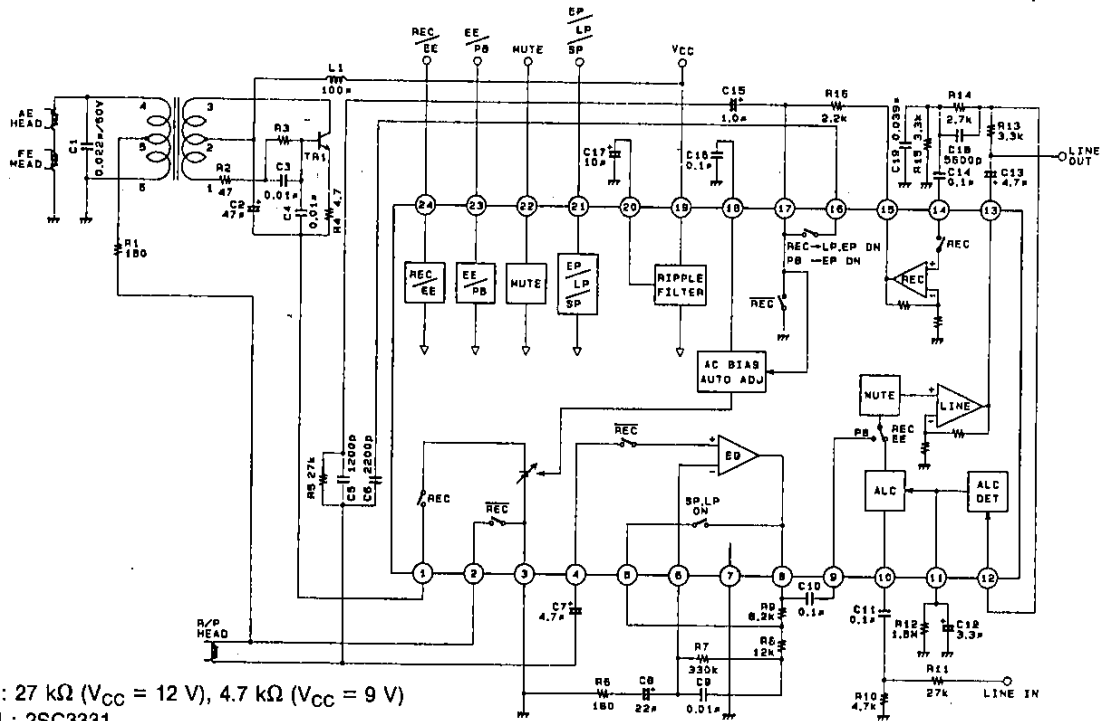

Package Dimensions

unit : mm

3067-DIP24S

Sample Application Circuit : Erase head series type

Unit (resistance: Ω, capacitance: F)

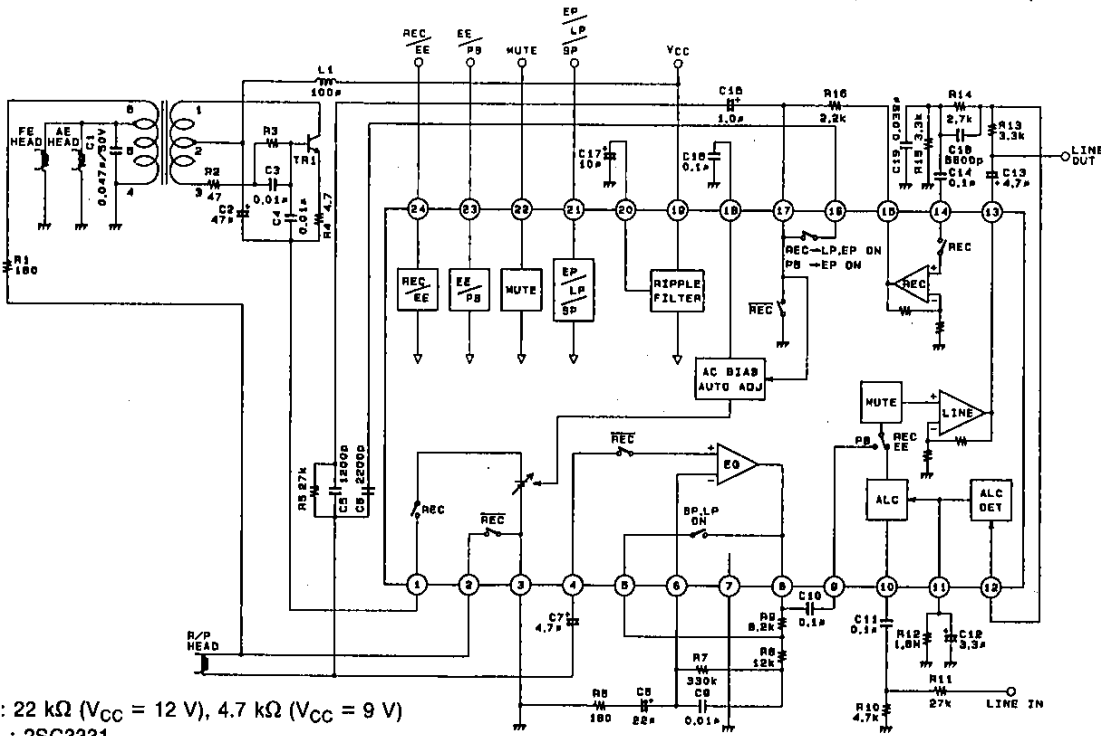

* R3 : 27 kΩ (V_{CC} = 12 V), 4.7 kΩ (V_{CC} = 9 V)
 * TR1 : 2SC3331

441800

Sample Application Circuit : Erase head parallel type

Unit (resistance: Ω, capacitance: F)

* R3 : 22 kΩ (V_{CC} = 12 V), 4.7 kΩ (V_{CC} = 9 V)
 * TR1 : 2SC3331

441801

LA7286

Pin Functions

Unit (resistance: Ω)

Pin No.	Function name	Internal circuit for pin	Description of function
1	Recording bias automatic control output	<p>A01992</p>	EE, PB → off REC → control voltage
2	Head switch (high withstand voltage)		EE, PB → on REC → off On resistance → 10 Ω (typ) Withstand voltage when off → ± 45 V (f = 80 kHz)
3	GND		GND for pin 2 head switch and Equalizer Amplifier only
4	EQ AMP input	<p>A01993</p>	Input impedance for playback signal input from head → 120 k Ω (typ)
5	EQ switch 1	<p>A01994</p>	Switches the Playback Equalizer Amplifier high-region frequency voltage gain. LP, SP → on EP → off On resistance → 20 Ω (typ)
6	EQ AMP NFB	<p>A01995</p>	Equalizer Amplifier negative feedback pin
7	GND		GND for all circuit blocks except the pin 2 head switch and Equalizer Amplifier

Unit (resistance: Ω)

Pin No.	Function name	Internal circuit for pin	Description of function
8	EQ AMP output		Output impedance \rightarrow 50 Ω (typ)
9	LINE AMP PB Input		Inputs the playback signal from the Equalizer Amplifier. Because the input impedance is as high as 120 k Ω , a 0.1 μ F ceramic capacitor can be used for the coupling capacitor on pin 9.
10	LINE AMP LINE Input		Inputs EE and REC signals. The reference input is set by resistors R1 and R2. The amplifier gain is fixed at 21.5 dB. In addition, because the input impedance is as high as 120 k Ω , a 0.1 μ F ceramic capacitor can be used for the coupling capacitor on pin 10.
11	ALC FILTER		Wave detection is performed when connected to GND through a capacitor. In addition, the attack and recovery time is set by the C and R time constants.
12	ALC Input wave detection		 Inputs the Line Amplifier output signal. The ALC level is set by the resistors R1 and R2.
