DESCRIPTION

The HEF4024B is a 7-stage binary ripple counter with a clock input (\overline{CP}), and overriding asynchronous master reset input (MR) and seven fully buffered parallel outputs (O_0 to O_6). The counter advances on the HIGH to LOW transition of \overline{CP} . A HIGH on MR clears all counter stages and forces all outputs LOW, independent of \overline{CP} . Each counter stage is a static toggle flip-flop.

PINNING

\overline{CP}	clock input (HIGH to LOW triggered)
MR	master reset input
O_0 to O_6	buffered parallel outputs

APPLICATION INFORMATION

Some examples of applications for the HEF4024B are:

- Frequency dividers
- Time delay circuits
