1-of-10 decoder

HEF4028B MSI

DESCRIPTION

The HEF4028B is a 4-bit BCD to 1-of-10 active HIGH decoder. A 1-2-4-8 BCD code applied to inputs A₀ to A₃ causes the selected output to be HIGH, the other nine will be LOW. If desired, the device may be used as a 1-of-8 decoder with enable; 3-bit octal inputs are applied to inputs A₀, A₁ and A₂ selecting an output O₀ to O₇. Input A₃ then becomes an active LOW enable, forcing the selected output LOW when A₃ is HIGH. The HEF4028B may also be used as an 8-output (O₀ to O₇) demultiplexer with A₀ to A₂ as address inputs and A₃ as an active LOW data input. The outputs are fully buffered for best performance.

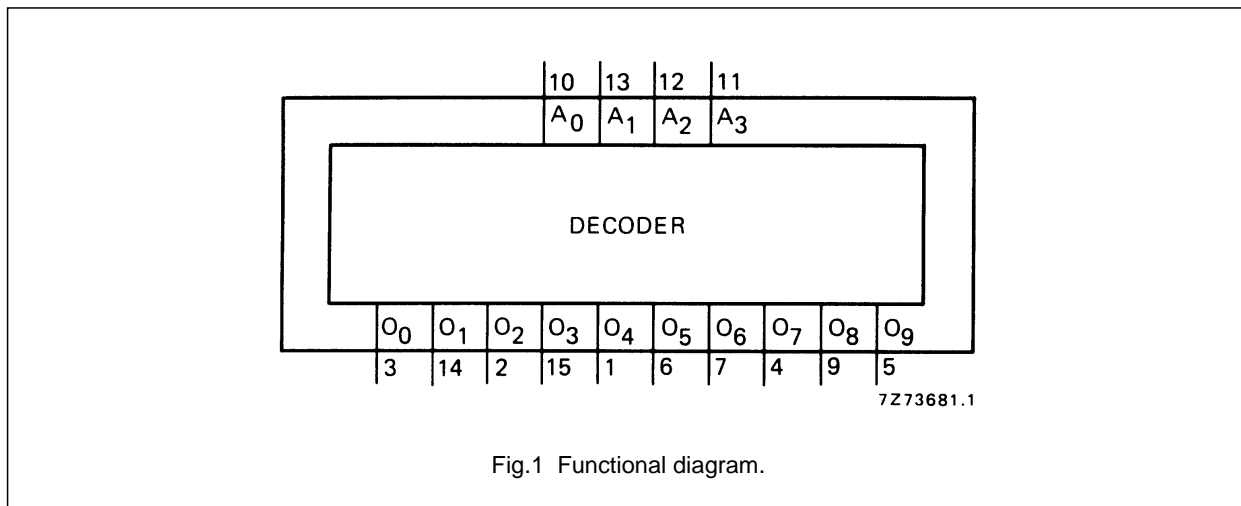

Fig.1 Functional diagram.

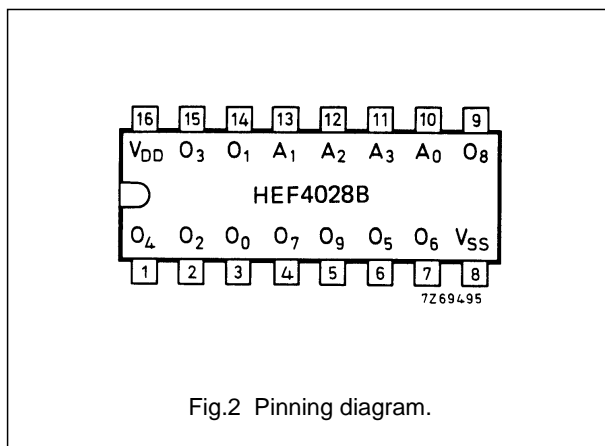

Fig.2 Pinning diagram.

- HEF4028BP(N): 16-lead DIL; plastic (SOT38-1)
 - HEF4028BD(F): 16-lead DIL; ceramic (cerdip) (SOT74)
 - HEF4028BT(D): 16-lead SO; plastic (SOT109-1)
- (): Package Designator North America

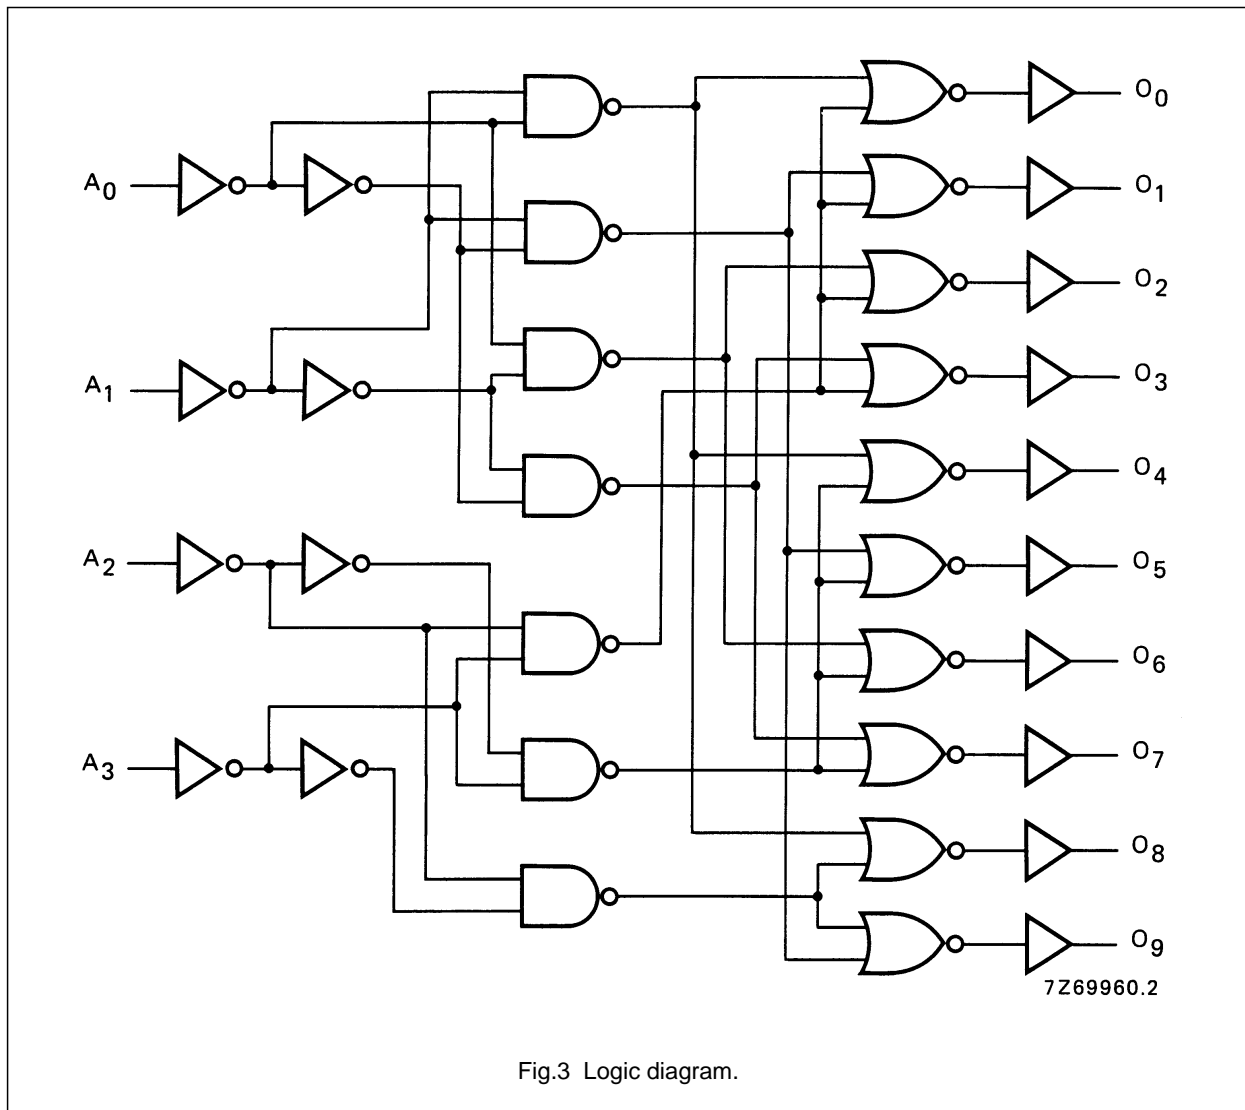

PINNING

- A₀ to A₃ address inputs, 1-2-4-8 BCD
- O₀ to O₉ outputs (active HIGH)

Notes

1. H = HIGH state (the more positive voltage)
L = LOW state (the less positive voltage)
2. Extraordinary states.

1-of-10 decoder
