

# High Frequency Power Supply Controller

## GENERAL DESCRIPTION

The ML4825 High Frequency PWM Controller is an IC controller optimized for use in Switch Mode Power Supply designs running at frequencies to 1MHz. Propagation delays are minimal through the comparators and logic for reliable high frequency operation while slew rate and bandwidth are maximized on the error amplifier. This controller is designed to work in either voltage or current mode and provides for input voltage feed forward.

A 1V threshold current limit comparator provides cycle-by-cycle current limit while exceeding a 1.4V threshold initiates a soft-start cycle. The soft start pin doubles as a maximum duty cycle clamp. An under-voltage lockout circuit with 800mV of hysteresis assures low startup current and drives the outputs low.

This controller is similar in architecture and performance to the UC1825 controller, however the ML4825 includes many features not found on the 1825. These features are set in *Italics*.

## FEATURES

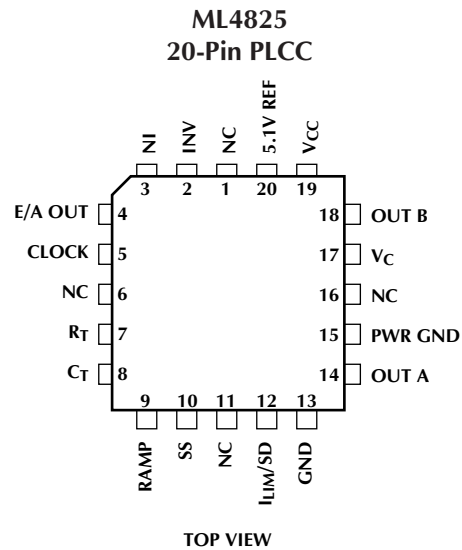

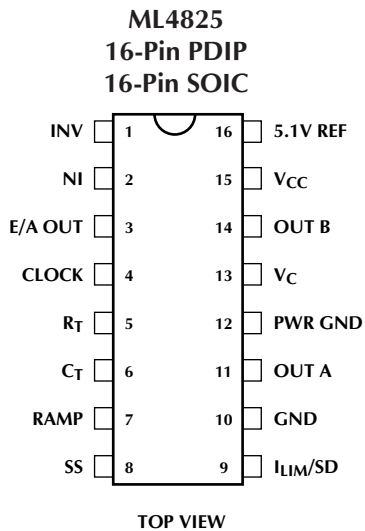

- Practical operation at switching frequencies to 1.0MHz
- High current (2A peak) dual totem pole outputs
- Wide bandwidth error amplifier
- Fully latched logic with double pulse suppression
- Pulse-by-pulse current limiting
- Soft start and maximum duty cycle control
- Under voltage lockout with hysteresis
- Precision trimmed 5.1V bandgap reference
- Pin compatible improved replacement for UC1825
- *Fast shut down path from current limit to outputs*
- *Outputs preset to known condition after under voltage lockout*
- *Soft start latch ensures full soft start cycle*
- *Outputs pull low for undervoltage lockout*

## BLOCK DIAGRAM (Pin configuration shown for 16-pin version)

*\*Some Packages Are Obsolete or End Of Life*

## PIN CONFIGURATION

## PIN DESCRIPTION (Pin number in parentheses is for PLCC version)

PIN	NAME	FUNCTION	PIN	NAME	FUNCTION
1 (2)	INV	Inverting input to error amp.	9 (12)	$I_{LIM}/SD$	Current limit sense pin. Normally connected to current sense resistor.
2 (3)	NI	Non-inverting input to error amp.	10 (13)	GND	Analog signal ground
3 (4)	E/A OUT	Output of error amplifier and input to main comparator	11 (14)	OUT A	High current totem pole output. This output is the first one energized after power on reset
4 (5)	CLOCK	Oscillator output	12 (15)	PWR GND	Return for the high current totem pole outputs
5 (7)	$R_T$	Timing resistor for oscillator—sets charging current for oscillator timing capacitor (pin 6)	13 (17)	$V_C$	Positive supply for the high current totem pole output
6 (8)	$C_T$	Timing capacitor for oscillator	14 (18)	OUT B	High current totem pole output
7 (9)	RAMP	Non-inverting input to main comparator. Connected to $C_T$ for voltage mode operation or to current sense resistor for current mode	15 (19)	$V_{CC}$	Positive supply for the IC
8 (10)	SS	Normally connected to soft start capacitor	16 (20)	5.1V REF	Buffered output for the 5.1V voltage reference

## ABSOLUTE MAXIMUM RATINGS

Absolute maximum ratings are those values beyond which the device could be permanently damaged. Absolute maximum ratings are stress ratings only and functional device operation is not implied.

Supply Voltage ( $V_C$ , $V_{CC}$ ) .....	30V
Output Current, Source or Sink (OUT A, OUT B)	
DC .....	0.5A
Pulse (0.5 $\mu$ s) .....	2.0A
Analog Inputs	
(INV, NI, RAMP) .....	GND -0.3V to 7V
(SS, I <sub>LIM</sub> ) .....	GND -0.3V to 6V
CLOCK Output Current .....	-5mA
E/A OUT Output Current .....	5mA
Soft Start Sink Current .....	20mA
$R_T$ Charging Current .....	-5mA

Junction Temperature

ML4825IX, ML4825CX .....	150°C
Storage Temperature Range .....	-65°C to 150°C
Lead Temperature (soldering 10 sec.) .....	260°C
Thermal Resistance ( $\theta_{JA}$ )	
Plastic DIP or SOIC .....	65°C/W
Plastic Chip Carrier (PCC) .....	60°C/W

## OPERATING CONDITIONS

Temperature Range

ML4825CX .....	0°C to 70°C
ML4825IX .....	-40°C to 85°C

## ELECTRICAL CHARACTERISTICS

Unless otherwise specified,  $R_T = 3.65k\Omega$ ,  $C_T = 1000pF$ ,  $T_A =$  Operating Temperature Range,  $V_{CC} = 15V$  (Note 1).

PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS	
<b>OSCILLATOR</b>						
Initial Accuracy	$T_J = 25^\circ C$	360	400	440	kHz

**Note 1:** Limits are guaranteed by 100% testing, sampling, or correlation with worst-case test conditions.

## FUNCTIONAL DESCRIPTION

### OSCILLATOR

The ML4825 oscillator charges the external capacitor ( $C_T$ ) with a current ( $I_{SET}$ ) equal to  $3/R_{SET}$ . When the capacitor voltage reaches the upper threshold (Ramp Peak), the comparator changes state and the capacitor discharges to the lower threshold (Ramp Valley) through Q1. While the capacitor is discharging, Q2 provides a high pulse.

The oscillator period can be described by the following relationship:

$$t_{OSC} = t_{RAMP} + t_{DEADTIME}$$

where:

$$t_{RAMP} = \frac{C \text{ (Ramp Valley to Peak)}}{I_{SET}}$$

and:

$$t_{DEADTIME} = \frac{C \text{ (Ramp Valley to Peak)}}{I_{Q1}}$$

Figure 3. Oscillator Deadtime vs Frequency

Figure 4. Oscillator Deadtime vs  $C_T$  ( $3k\Omega \leq R_T \leq 100k\Omega$ )

## ERROR AMPLIFIER

The ML4825 error amplifier is a 5.5MHz bandwidth 12V/ $\mu$ s slew rate op-amp with provision for limiting the positive output voltage swing (Output Inhibit line) for ease in implementing the soft start function.

## OUTPUT DRIVER STAGE

The ML4825 Output Driver is a 2A peak output high speed totem pole circuit designed to quickly switch the gates of capacitive loads, such as power MOSFET transistors.

## SOFT START AND CURRENT LIMIT

The ML4825 employs two current limits. When the voltage at  $I_{LIM}/SD$  exceeds 1V, the outputs are immediately shut off and the cycle is terminated for the remainder of the oscillator period by resetting the RS flip flop.

If the output current is rising quickly such that the voltage on  $I_{LIM}/SD$  reaches 1.4V before the outputs have turned off, a soft start cycle is initiated. The soft start capacitor is discharged and outputs are held "off" until the voltage at SS reaches 1V, ensuring a complete soft start cycle. The duty cycle on start up is limited by limiting the output voltage of the error amplifier voltage to the voltage at SS.
